FORGEROCK®

Entity Reference
/ Amster 6.5.5

Latest update: 6.5.5

Copyright © 2017-2018 ForgeRock AS.

Abstract

Reference of the ForgeRock® Access Management command-line interface entities.

Table of Contents

Preface

This reference contains:

- Entities supported in Amster commands

- Actions you can perform with Amster commands.

This guide is written for anyone using Amster to configure and manage ForgeRock Access Management deployments.

About ForgeRock Identity Platform™ Software

ForgeRock Identity Platform™ serves as the basis for our simple and comprehensive Identity and Access Management solution. We help our customers deepen their relationships with their customers, and improve the productivity and connectivity of their employees and partners. For more information about ForgeRock and about the platform, see https://www.forgerock.com.

Chapter 1
Amster Entity Reference

This chapter contains details of the entities available to Amster in AM 6.5.5.

1.1. AccountActiveCheck

1.1.1. Realm Operations

Resource path: `/realm-config/authentication/modules/accountactivecheck`

Resource version: `1.0`

1.1.1.1. create

Usage:

```
am> create AccountActiveCheck --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : null,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.1.1.2. delete

Usage:

```
am> delete AccountActiveCheck --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.1.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AccountActiveCheck --realm Realm --actionName getAllTypes
```

1.1.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AccountActiveCheck --realm Realm --actionName getCreatableTypes
```

1.1.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AccountActiveCheck --realm Realm --actionName nextdescendents
```

1.1.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AccountActiveCheck --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.1.1.7. read

Usage:

```
am> read AccountActiveCheck --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.1.1.8. update

Usage:

```
am> update AccountActiveCheck --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : null,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.1.2. Global Operations

Resource path: `/global-config/authentication/modules/accountactivecheck`

Resource version: `1.0`

1.1.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AccountActiveCheck --global --actionName getAllTypes
```

1.1.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AccountActiveCheck --global --actionName getCreatableTypes
```

1.1.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AccountActiveCheck --global --actionName nextdescendents
```

1.1.2.4. read

Usage:

```
am> read AccountActiveCheck --global
```

1.1.2.5. update

Usage:

```
am> update AccountActiveCheck --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
          "propertyOrder" : null,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.2. AccountLockout

1.2.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/AccountLockoutNode`

Resource version: `1.0`

1.2.1.1. create

Usage:

```
am> create AccountLockout --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "lockAction" : {
      "title" : "Lock Action",
      "description" : "If the action is set to LOCK, the node will lock the account.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "lockAction" ]
}
```

1.2.1.2. delete

Usage:

```
am> delete AccountLockout --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.2.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AccountLockout --realm Realm --actionName getAllTypes
```

1.2.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AccountLockout --realm Realm --actionName getCreatableTypes
```

1.2.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action AccountLockout --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "title" : "Some configuration of the node. This does not need to be complete against the
>  configuration schema."
> }
> ```

1.2.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AccountLockout --realm Realm --actionName nextdescendents
```

1.2.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AccountLockout --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.2.1.8. read

Usage:

```
am> read AccountLockout --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.2.1.9. update

Usage:

```
am> update AccountLockout --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "lockAction" : {
      "title" : "Lock Action",
      "description" : "If the action is set to LOCK, the node will lock the account.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "lockAction" ]
}
```

1.3. ActiveDirectory

1.3.1. Realm Operations

Resource path: `/realm-config/services/id-repositories/LDAPv3ForAD`

Resource version: `1.0`

1.3.1.1. create

Usage:

```
am> create ActiveDirectory --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",
  "properties" : {
    "userconfig" : {
      "type" : "object",
      "title" : "User Configuration",
      "propertyOrder" : 3,
      "properties" : {
        "sun-idrepo-ldapv3-config-user-attributes" : {
          "title" : "LDAP User Attributes",
          "description" : "",
          "propertyOrder" : 2400,
          "required" : false,
          "items" : {
            "type" : "string"
          },
          "type" : "array",
          "exampleValue" : ""
        },
        "sun-idrepo-ldapv3-config-users-search-filter" : {
          "title" : "LDAP Users  Search Filter",
          "description" : "",
          "propertyOrder" : 2200,
          "required" : false,
          "type" : "string",
          "exampleValue" : ""
        },
        "sun-idrepo-ldapv3-config-isactive" : {
          "title" : "Attribute Name of User Status",
          "description" : "",
          "propertyOrder" : 2600,
          "required" : false,
          "type" : "string",
          "exampleValue" : ""
        },
        "sun-idrepo-ldapv3-config-users-search-attribute" : {
          "title" : "LDAP Users  Search Attribute",
          "description" : "",
          "propertyOrder" : 2100,
          "required" : false,
          "type" : "string",
          "exampleValue" : ""
        },
        "sun-idrepo-ldapv3-config-auth-kba-attempts-attr" : {

```

1.3.1.2. delete

Usage:

```
am> delete ActiveDirectory --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.3.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ActiveDirectory --realm Realm --actionName getAllTypes
```

1.3.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ActiveDirectory --realm Realm --actionName getCreatableTypes
```

1.3.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ActiveDirectory --realm Realm --actionName nextdescendents
```

1.3.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ActiveDirectory --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.3.1.7. read

Usage:

```
am> read ActiveDirectory --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.3.1.8. update

Usage:

```
am> update ActiveDirectory --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```

1.4. ActiveDirectoryApplicationModeADAM

1.4.1. Realm Operations

Resource path: `/realm-config/services/id-repositories/LDAPv3ForADAM`

Resource version: `1.0`

1.4.1.1. create

Usage:

```
am> create ActiveDirectoryApplicationModeADAM --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "ldapsettings" : {
      "type" : "object",

}
```

1.4.1.2. delete

Usage:

```
am> delete ActiveDirectoryApplicationModeADAM --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.4.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ActiveDirectoryApplicationModeADAM --realm Realm --actionName getAllTypes
```

1.4.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ActiveDirectoryApplicationModeADAM --realm Realm --actionName getCreatableTypes
```

1.4.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ActiveDirectoryApplicationModeADAM --realm Realm --actionName nextdescendents
```

1.4.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ActiveDirectoryApplicationModeADAM --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.4.1.7. read

Usage:

```
am> read ActiveDirectoryApplicationModeADAM --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.4.1.8. update

Usage:

```
am> update ActiveDirectoryApplicationModeADAM --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

1.5. ActiveDirectoryModule

1.5.1. Realm Operations

Resource path: `/realm-config/authentication/modules/activedirectory`

Resource version: `1.0`

1.5.1.1. create

Usage:

```
am> create ActiveDirectoryModule --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "userSearchStartDN" : {
      "title" : "DN to Start User Search",
      "description" : "The search for accounts to be authenticated start from this base DN <br><br>For
a single server just enter the Base DN to be searched. Multiple OpenAM servers can have different
base DNs for the search The format is as follows:<br/><br/><code>local server name | search DN</
code><br/><br/><i>NB </i>The local server name is the full name of the server from the list of servers
and sites.",

  }
```

```
}
```

1.5.1.2. delete

Usage:

```
am> delete ActiveDirectoryModule --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.5.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ActiveDirectoryModule --realm Realm --actionName getAllTypes
```

1.5.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ActiveDirectoryModule --realm Realm --actionName getCreatableTypes
```

1.5.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ActiveDirectoryModule --realm Realm --actionName nextdescendents
```

1.5.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ActiveDirectoryModule --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.5.1.7. read

Usage:

```
am> read ActiveDirectoryModule --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.5.1.8. update

Usage:

```
am> update ActiveDirectoryModule --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "userSearchStartDN" : {
      "title" : "DN to Start User Search",

1.5.2. Global Operations

Resource path: `/global-config/authentication/modules/activedirectory`

Resource version: `1.0`

1.5.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ActiveDirectoryModule --global --actionName getAllTypes
```

1.5.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ActiveDirectoryModule --global --actionName getCreatableTypes
```

1.5.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ActiveDirectoryModule --global --actionName nextdescendents
```

1.5.2.4. read

Usage:

```
am> read ActiveDirectoryModule --global
```

1.5.2.5. update

Usage:

```
am> update ActiveDirectoryModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```

1.6. AdaptiveRiskModule

1.6.1. Realm Operations

Resource path: `/realm-config/authentication/modules/adaptiverisk`

Resource version: `1.0`

1.6.1.1. create

Usage:

```
am> create AdaptiveRiskModule --realm Realm --id id --body body
```

Parameters:

`--id`

   The unique identifier for the resource.

`--body`

   The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "iprange" : {
      "type" : "object",
      "title" : "IP Address Range",
```

```
      "propertyOrder" : 2,
      "properties" : {
        "ipRangeScore" : {
          "title" : "Score",
          "description" : "The amount to increment the score if this check fails.",
          "propertyOrder" : 800,

    }
  }
}
```

1.6.1.2. delete

Usage:

```
am> delete AdaptiveRiskModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.6.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AdaptiveRiskModule --realm Realm --actionName getAllTypes
```

1.6.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AdaptiveRiskModule --realm Realm --actionName getCreatableTypes
```

1.6.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AdaptiveRiskModule --realm Realm --actionName nextdescendents
```

1.6.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AdaptiveRiskModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.6.1.7. read

Usage:

```
am> read AdaptiveRiskModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.6.1.8. update

Usage:

```
am> update AdaptiveRiskModule --realm Realm --id id --body body
```

Parameters:

--id

    The unique identifier for the resource.

--body

    The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "iprange" : {
      "type" : "object",

1.6.2. Global Operations

Resource path: `/global-config/authentication/modules/adaptiverisk`

Resource version: `1.0`

1.6.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AdaptiveRiskModule --global --actionName getAllTypes
```

1.6.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AdaptiveRiskModule --global --actionName getCreatableTypes
```

1.6.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AdaptiveRiskModule --global --actionName nextdescendents
```

1.6.2.4. read

Usage:

```
am> read AdaptiveRiskModule --global
```

1.6.2.5. update

Usage:

```
am> update AdaptiveRiskModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {

```

1.7. AdvancedProperties

1.7.1. Global Operations

An object of property key-value pairs

Resource path: `/global-config/servers/{serverName}/properties/advanced`

Resource version: `1.0`

1.7.1.1. read

Usage:

```
am> read AdvancedProperties --global --serverName serverName
```

Parameters:

--serverName

An object of property key-value pairs

1.7.1.2. update

Usage:

```
am> update AdvancedProperties --global --serverName serverName --body body
```

Parameters:

--serverName

An object of property key-value pairs

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "patternProperties" : {
    ".+" : {
      "type" : "string",
      "title" : "Value",
      "description" : "Any string value"
    }
  },
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "An object of property key-value pairs",
  "type" : "object",
  "title" : "Advanced Properties"
}
```

1.8. AgentDataStoreDecision

1.8.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/AgentDataStoreDecisionNode`

Resource version: `1.0`

1.8.1.1. create

Usage:

```
am> create AgentDataStoreDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.8.1.2. delete

Usage:

```
am> delete AgentDataStoreDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.8.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AgentDataStoreDecision --realm Realm --actionName getAllTypes
```

1.8.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AgentDataStoreDecision --realm Realm --actionName getCreatableTypes
```

1.8.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action AgentDataStoreDecision --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.8.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AgentDataStoreDecision --realm Realm --actionName nextdescendents
```

1.8.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AgentDataStoreDecision --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.8.1.8. read

Usage:

```
am> read AgentDataStoreDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.8.1.9. update

Usage:

```
am> update AgentDataStoreDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.9. AgentGroups

1.9.1. Realm Operations

Aggregating Agent Groups handler that is responsible for querying the aggregating agent groups

Resource path: `/realm-config/agents/groups`

Resource version: `1.0`

1.9.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AgentGroups --realm Realm --actionName getAllTypes
```

1.9.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AgentGroups --realm Realm --actionName getCreatableTypes
```

1.9.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AgentGroups --realm Realm --actionName nextdescendents
```

1.9.1.4. query

Querying the aggregating agent groups

Usage:

```
am> query AgentGroups --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

1.10. AgentService

1.10.1. Global Operations

Resource path: `/global-config/agents/AgentService`

Resource version: `1.0`

1.10.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AgentService --global --actionName getAllTypes
```

1.10.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AgentService --global --actionName getCreatableTypes
```

1.10.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AgentService --global --actionName nextdescendents
```

1.10.1.4. read

Usage:

```
am> read AgentService --global
```

1.10.1.5. update

Usage:

```
am> update AgentService --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object"
}
```

1.11. Agents

1.11.1. Realm Operations

Aggregating Agents handler that is responsible for querying the aggregating agents

Resource path: `/realm-config/agents`

Resource version: `1.0`

1.11.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Agents --realm Realm --actionName getAllTypes
```

1.11.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Agents --realm Realm --actionName getCreatableTypes
```

1.11.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Agents --realm Realm --actionName nextdescendents
```

1.11.1.4. query

Querying the aggregating agents

Usage:

```
am> query Agents --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

1.11.2. Global Operations

Global and default configuration for agents

Resource path: `/global-config/agents`

Resource version: `1.0`

1.11.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Agents --global --actionName getAllTypes
```

1.11.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Agents --global --actionName getCreatableTypes
```

1.11.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Agents --global --actionName nextdescendents
```

1.12. AmsterModule

1.12.1. Realm Operations

Resource path: `/realm-config/authentication/modules/amster`

Resource version: `1.0`

1.12.1.1. create

Usage:

```
am> create AmsterModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "authorizedKeys" : {
      "title" : "Authorized Keys",
      "description" : "The location of the authorized_keys file (which has the same format as an
 OpenSSH authorized_keys file) to use to validate remote Amster connections.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "enabled" : {
      "title" : "Enabled",
      "description" : "If not enabled, prevents PKI login using the Amster module.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    }
  }
}
```

1.12.1.2. delete

Usage:

```
am> delete AmsterModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.12.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AmsterModule --realm Realm --actionName getAllTypes
```

1.12.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AmsterModule --realm Realm --actionName getCreatableTypes
```

1.12.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AmsterModule --realm Realm --actionName nextdescendents
```

1.12.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AmsterModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.12.1.7. read

Usage:

```
am> read AmsterModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.12.1.8. update

Usage:

```
am> update AmsterModule --realm Realm --id id --body body
```

Parameters:

`--id`

> The unique identifier for the resource.

`--body`

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "authorizedKeys" : {
      "title" : "Authorized Keys",
      "description" : "The location of the authorized_keys file (which has the same format as an
 OpenSSH authorized_keys file) to use to validate remote Amster connections.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "enabled" : {
      "title" : "Enabled",
      "description" : "If not enabled, prevents PKI login using the Amster module.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    }
  }
}
```

1.12.2. Global Operations

Resource path: `/global-config/authentication/modules/amster`

Resource version: `1.0`

1.12.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AmsterModule --global --actionName getAllTypes
```

1.12.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AmsterModule --global --actionName getCreatableTypes
```

1.12.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AmsterModule --global --actionName nextdescendents
```

1.12.2.4. read

Usage:

```
am> read AmsterModule --global
```

1.12.2.5. update

Usage:

```
am> update AmsterModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "authorizedKeys" : {
```

```
        "title" : "Authorized Keys",
        "description" : "The location of the authorized_keys file (which has the same format as an
 OpenSSH authorized_keys file) to use to validate remote Amster connections.",
        "propertyOrder" : 100,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      },
      "enabled" : {
        "title" : "Enabled",
        "description" : "If not enabled, prevents PKI login using the Amster module.",
        "propertyOrder" : 200,
        "required" : true,
        "type" : "boolean",
        "exampleValue" : ""
      }
    },
    "type" : "object",
    "title" : "Realm Defaults"
  }
 }
}
```

1.13. AnonymousModule

1.13.1. Realm Operations

Resource path: `/realm-config/authentication/modules/anonymous`

Resource version: `1.0`

1.13.1.1. create

Usage:

```
am> create AnonymousModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
```

```
      "caseSensitiveUsernameMatchingEnabled" : {
        "title" : "Case Sensitive User IDs",
        "description" : "If enabled, username matching will be case sensitive.",
        "propertyOrder" : 300,
        "required" : true,
        "type" : "boolean",
        "exampleValue" : ""
      },
      "validAnonymousUsers" : {
        "title" : "Valid Anonymous Users",
        "description" : "List of accounts that are allowed to login without providing
 credentials.<br><br>Any username on this list will be allows anonymous access to OpenAM. Usernames
 listed here must have matching profiles in the data store or the user profile requirement must be
 disabled. The username can be specified during anonymous authentication as follows:<br/><br/><code>/
 openam/UI/Login?module=anonymous&IDToken1=<i>username</i></code>",
        "propertyOrder" : 100,
        "required" : true,
        "items" : {
          "type" : "string"
        },
        "type" : "array",
        "exampleValue" : ""
      },
      "authenticationLevel" : {
        "title" : "Authentication Level",
        "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
        "propertyOrder" : 400,
        "required" : true,
        "type" : "integer",
        "exampleValue" : ""
      },
      "defaultAnonymousUsername" : {
        "title" : "Default Anonymous User Name",
        "description" : "The default username to use if no username is supplied during authentication.",
        "propertyOrder" : 200,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      }
    }
  }
}
```

1.13.1.2. delete

Usage:

```
am> delete AnonymousModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.13.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AnonymousModule --realm Realm --actionName getAllTypes
```

1.13.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AnonymousModule --realm Realm --actionName getCreatableTypes
```

1.13.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AnonymousModule --realm Realm --actionName nextdescendents
```

1.13.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AnonymousModule --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.13.1.7. read

Usage:

```
am> read AnonymousModule --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.13.1.8. update

Usage:

```
am> update AnonymousModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "caseSensitiveUsernameMatchingEnabled" : {
      "title" : "Case Sensitive User IDs",
      "description" : "If enabled, username matching will be case sensitive.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "validAnonymousUsers" : {
      "title" : "Valid Anonymous Users",
      "description" : "List of accounts that are allowed to login without providing
 credentials.<br><br>Any username on this list will be allows anonymous access to OpenAM. Usernames
 listed here must have matching profiles in the data store or the user profile requirement must be
 disabled. The username can be specified during anonymous authentication as follows:<br/><br/><code>/
 openam/UI/Login?module=anonymous&IDToken1=<i>username</i></code>",
      "propertyOrder" : 100,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "defaultAnonymousUsername" : {
      "title" : "Default Anonymous User Name",
      "description" : "The default username to use if no username is supplied during authentication.",
      "propertyOrder" : 200,
      "required" : true,
```

```
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.13.2. Global Operations

Resource path: `/global-config/authentication/modules/anonymous`

Resource version: `1.0`

1.13.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AnonymousModule --global --actionName getAllTypes
```

1.13.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AnonymousModule --global --actionName getCreatableTypes
```

1.13.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AnonymousModule --global --actionName nextdescendents
```

1.13.2.4. read

Usage:

```
am> read AnonymousModule --global
```

1.13.2.5. update

Usage:

```
am> update AnonymousModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "caseSensitiveUsernameMatchingEnabled" : {
          "title" : "Case Sensitive User IDs",
          "description" : "If enabled, username matching will be case sensitive.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        },
        "validAnonymousUsers" : {
          "title" : "Valid Anonymous Users",
          "description" : "List of accounts that are allowed to login without providing
 credentials.<br><br>Any username on this list will be allows anonymous access to OpenAM. Usernames
 listed here must have matching profiles in the data store or the user profile requirement must be
 disabled. The username can be specified during anonymous authentication as follows:<br/><br/><code>/
openam/UI/Login?module=anonymous&IDToken1=<i>username</i></code>",
          "propertyOrder" : 100,
          "required" : true,
          "items" : {
            "type" : "string"
          },
          "type" : "array",
          "exampleValue" : ""
        },
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
          "propertyOrder" : 400,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "defaultAnonymousUsername" : {
          "title" : "Default Anonymous User Name",
          "description" : "The default username to use if no username is supplied during
 authentication.",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
```

```
      }
    }
}
```

1.14. AnonymousSessionUpgrade

1.14.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/AnonymousSessionUpgradeNode`

Resource version: `1.0`

1.14.1.1. create

Usage:

```
am> create AnonymousSessionUpgrade --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "required" : [ ]
> }
> ```

1.14.1.2. delete

Usage:

```
am> delete AnonymousSessionUpgrade --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.14.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AnonymousSessionUpgrade --realm Realm --actionName getAllTypes
```

1.14.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AnonymousSessionUpgrade --realm Realm --actionName getCreatableTypes
```

1.14.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action AnonymousSessionUpgrade --realm Realm --body body --actionName listOutcomes
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.14.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AnonymousSessionUpgrade --realm Realm --actionName nextdescendents
```

1.14.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AnonymousSessionUpgrade --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.14.1.8. read

Usage:

```
am> read AnonymousSessionUpgrade --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.14.1.9. update

Usage:

```
am> update AnonymousSessionUpgrade --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.15. AnonymousUserMapping

1.15.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/AnonymousUserNode`

Resource version: `1.0`

1.15.1.1. create

Usage:

```
am> create AnonymousUserMapping --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "anonymousUserName" : {
      "title" : "Anonymous User Name",
      "description" : "The username of the user that will represent the anonymous user. This user
 account must already exist in the realm.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "anonymousUserName" ]
}
```

1.15.1.2. delete

Usage:

```
am> delete AnonymousUserMapping --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.15.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AnonymousUserMapping --realm Realm --actionName getAllTypes
```

1.15.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AnonymousUserMapping --realm Realm --actionName getCreatableTypes
```

1.15.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action AnonymousUserMapping --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.15.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AnonymousUserMapping --realm Realm --actionName nextdescendents
```

1.15.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AnonymousUserMapping --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.15.1.8. read

Usage:

```
am> read AnonymousUserMapping --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.15.1.9. update

Usage:

```
am> update AnonymousUserMapping --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "anonymousUserName" : {
      "title" : "Anonymous User Name",
      "description" : "The username of the user that will represent the anonymous user. This user
 account must already exist in the realm.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "anonymousUserName" ]
}
```

1.16. ApplicationTypes

1.16.1. Realm Operations

Service for reading and listing the available application types. Application types act as templates for policy sets, and define how to compare resources and index policies. OpenAM provides a default application type that represents web resources called iPlanetAMWebAgentService

Resource path: `/applicationtypes`

Resource version: `1.0`

1.16.1.1. query

Lists the application types using a query filter

Usage:

```
am> query ApplicationTypes --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

1.16.1.2. read

Reads an individual application type by the provided application type name

Usage:

```
am> read ApplicationTypes --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.17. Applications

1.17.1. Realm Operations

Service for manipulating Applications. It supports the CRUDQ operations.

Resource path: `/applications`

Resource version: `2.1`

1.17.1.1. create

Creates a new Application in a realm

Usage:

```
am> create Applications --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Application schema",
  "type" : "object",
  "title" : "Application",
  "properties" : {
    "name" : {
      "type" : "string",
      "title" : "Name",
      "description" : "Unique application identifier."
    },
    "displayName" : {
      "type" : "string",
      "title" : "Display name",
      "description" : "When defined, it is displayed in the UI instead of application name."
    },
    "description" : {
      "type" : "string",
      "title" : "Description",
      "description" : "String describing the application."
    },
    "applicationType" : {
      "type" : "string",
      "title" : "Application type",
      "description" : "Name of the application type used as a template for the policy set."
    },
    "conditions" : {
      "type" : "array",
      "items" : {
        "type" : "string",
        "title" : "Conditions",
        "description" : "Condition types allowed in the context of the policy set."
      }
    },
    "subjects" : {
      "type" : "array",
      "items" : {
        "type" : "string",
        "title" : "Subjects",
        "description" : "Subject types allowed in the context of the policy set."
      }
    },
    "resourceTypeUuids" : {
      "type" : "array",
      "items" : {
        "type" : "string",
        "title" : "Resource type uuids",
        "description" : "A list of the UUIDs of the resource types associated with the policy set."
      }
    },
    "entitlementCombiner" : {
```

```
      "type" : "string",
      "title" : "Entitlement combiner",
      "description" : "Name of the decision combiner, such as \"DenyOverride\"."
    },
    "searchIndex" : {
      "type" : "string",
      "title" : "Search index",
      "description" : "Class name of the implementation for searching indexes for resource names, such
as \"com.sun.identity.entitlement.util.ResourceNameSplitter\" for URL resource names."
    },
    "saveIndex" : {
      "type" : "string",
      "title" : "Save index",
      "description" : "Class name of the implementation for creating indexes for resource names, such
as \"com.sun.identity.entitlement.util.ResourceNameIndexGenerator\" for URL resource names."
    },
    "resourceComparator" : {
      "type" : "string",
      "title" : "Resource comparator",
      "description" : "Class name of the resource comparator implementation
used in the context of the policy set. The following implementations
are available: \"com.sun.identity.entitlement.ExactMatchResourceName\",
\"com.sun.identity.entitlement.PrefixResourceName\", \"com.sun.identity.entitlement.RegExResourceName
\", \"com.sun.identity.entitlement.URLResourceName\"."
    },
    "attributeNames" : {
      "type" : "array",
      "items" : {
        "type" : "string",
        "title" : "Attribute names",
        "description" : "A list of attribute names such as cn. The list is used to aid policy indexing
and lookup."
      }
    },
    "createdBy" : {
      "type" : "string",
      "title" : "Created by",
      "description" : "A string containing the universal identifier DN of the subject that created the
application."
    },
    "lastModifiedBy" : {
      "type" : "string",
      "title" : "Last modified by",
      "description" : "A string containing the universal identifier DN of the subject that most
recently updated the application. If the application has not been modified since it was created, this
will be the same value as createdBy."
    },
    "creationDate" : {
      "type" : "integer",
      "title" : "Creation date",
      "description" : "An integer containing the creation date and time, in number of seconds since
the Unix Epoch."
    },
    "lastModifiedDate" : {
      "type" : "integer",
      "title" : "Last modified date",
      "description" : "An integer containing the last modified date and time, in number of seconds
since the Unix Epoch. If the application has not been modified since it was created, this will be the
same value as creationDate."
```

```
      },
      "editable" : {
        "type" : "boolean",
        "title" : "Editable",
        "description" : "It indicates if application is editable."
      }
    },
    "required" : [ "name", "applicationType" ]
}
```

1.17.1.2. delete

Deletes an individual Application in a realm specified by its name

Usage:

```
am> delete Applications --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.17.1.3. query

Lists all the Applications in a realm

Usage:

```
am> query Applications --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

1.17.1.4. read

Reads an individual Application in a realm specified by its name

Usage:

```
am> read Applications --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.17.1.5. update

Updates an individual Application in a realm specified by its name

Usage:

```
am> update Applications --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Application schema",
  "type" : "object",
  "title" : "Application",
  "properties" : {
    "name" : {
      "type" : "string",
      "title" : "Name",
      "description" : "Unique application identifier."
    },
    "displayName" : {
      "type" : "string",
      "title" : "Display name",
      "description" : "When defined, it is displayed in the UI instead of application name."
    },
    "description" : {
      "type" : "string",
      "title" : "Description",
      "description" : "String describing the application."
    },
    "applicationType" : {
      "type" : "string",
      "title" : "Application type",
      "description" : "Name of the application type used as a template for the policy set."
    },
    "conditions" : {
      "type" : "array",
      "items" : {
        "type" : "string",
        "title" : "Conditions",
        "description" : "Condition types allowed in the context of the policy set."
      }
    },
    "subjects" : {
      "type" : "array",
      "items" : {
        "type" : "string",
        "title" : "Subjects",

1.18. AuditEvent

1.18.1. Realm Operations

Audit events are logged through a realm audit service.

Resource path: `/realm-audit/{topic}`

Resource version: `1.0`

1.18.1.1. create

Create a new audit event, which will be handled and logged by the configured audit service.

Usage:

```
am> create AuditEvent --realm Realm --topic topic --body body
```

Parameters:

`--topic`

Audit events are logged through a realm audit service.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
```

1.18.2. Global Operations

Audit events are logged through the global audit service.

Resource path: `/global-audit/{topic}`

Resource version: `1.0`

1.18.2.1. create

Create a new audit event, which will be handled and logged by the configured audit service.

Usage:

```
am> create AuditEvent --global --topic topic --body body
```

Parameters:

`--topic`

Audit events are logged through the global audit service.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "The schema contains properties that are common to all topics and some that are
 unique to a specific topic. The description of each property indicates which topic the property
 applies to.",

1.19. AuditLogging

1.19.1. Realm Operations

Resource path: `/realm-config/services/audit`

Resource version: `1.0`

1.19.1.1. create

Usage:

```
am> create AuditLogging --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "auditEnabled" : {
      "title" : "Audit logging",
      "description" : "Enable audit logging in OpenAM.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "fieldFilterPolicy" : {
      "title" : "Field exclusion policies",
      "description" : "A list of fields or values (JSON pointers) to exclude from the audit
event.<br><br>To specify a field or value within a field to be filtered out of the event, start
the pointer with the event topic, for example access, activity, authentication, or config, followed
by the field name or the path to the value in the field.<p><p>For example, to filter out the
<code>userId</code> field in an access event the pointer will be <code>/access/userId</code>.<p>To
filter out the <code>content-type</code> value in the <code>http.request.headers</code> field the
pointer will be <code>/access/http/request/headers/content-type</code>.<p>Only values that are made
up of JSON strings can be manipulated in this way.",
      "propertyOrder" : 200,
      "required" : false,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.19.1.2. delete

Usage:

```
am> delete AuditLogging --realm Realm
```

1.19.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuditLogging --realm Realm --actionName getAllTypes
```

1.19.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuditLogging --realm Realm --actionName getCreatableTypes
```

1.19.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuditLogging --realm Realm --actionName nextdescendents
```

1.19.1.6. read

Usage:

```
am> read AuditLogging --realm Realm
```

1.19.1.7. update

Usage:

```
am> update AuditLogging --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "auditEnabled" : {
      "title" : "Audit logging",
      "description" : "Enable audit logging in OpenAM.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "fieldFilterPolicy" : {
      "title" : "Field exclusion policies",
      "description" : "A list of fields or values (JSON pointers) to exclude from the audit
event.<br><br>To specify a field or value within a field to be filtered out of the event, start
the pointer with the event topic, for example access, activity, authentication, or config, followed
by the field name or the path to the value in the field.<p><p>For example, to filter out the
<code>userId</code> field in an access event the pointer will be <code>/access/userId</code>.<p>To
filter out the <code>content-type</code> value in the <code>http.request.headers</code> field the
pointer will be <code>/access/http/request/headers/content-type</code>.<p>Only values that are made
up of JSON strings can be manipulated in this way.",
      "propertyOrder" : 200,
      "required" : false,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.19.2. Global Operations

Resource path: `/global-config/services/audit`

Resource version: `1.0`

1.19.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuditLogging --global --actionName getAllTypes
```

1.19.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuditLogging --global --actionName getCreatableTypes
```

1.19.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuditLogging --global --actionName nextdescendents
```

1.19.2.4. read

Usage:

```
am> read AuditLogging --global
```

1.19.2.5. update

Usage:

```
am> update AuditLogging --global --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "auditEnabled" : {
      "title" : "Audit logging",
      "description" : "Enable audit logging in OpenAM.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "fieldFilterPolicy" : {
      "title" : "Field exclusion policies",
      "description" : "A list of fields or values (JSON pointers) to exclude from the audit
event.<br><br>To specify a field or value within a field to be filtered out of the event, start
the pointer with the event topic, for example access, activity, authentication, or config, followed
by the field name or the path to the value in the field.<p><p>For example, to filter out the
<code>userId</code> field in an access event the pointer will be <code>/access/userId</code>.<p>To
filter out the <code>content-type</code> value in the <code>http.request.headers</code> field the
pointer will be <code>/access/http/request/headers/content-type</code>.<p>Only values that are made
up of JSON strings can be manipulated in this way.",
      "propertyOrder" : 200,
      "required" : false,
```

```
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "defaults" : {
      "properties" : {
        "fieldFilterPolicy" : {
          "title" : "Field exclusion policies",
          "description" : "A list of fields or values (JSON pointers) to exclude from the audit
event.<br><br>To specify a field or value within a field to be filtered out of the event, start
the pointer with the event topic, for example access, activity, authentication, or config, followed
by the field name or the path to the value in the field.<p><p>For example, to filter out the
<code>userId</code> field in an access event the pointer will be <code>/access/userId</code>.<p>To
filter out the <code>content-type</code> value in the <code>http.request.headers</code> field the
pointer will be <code>/access/http/request/headers/content-type</code>.<p>Only values that are made
up of JSON strings can be manipulated in this way.",
          "propertyOrder" : 200,
          "required" : false,
          "items" : {
            "type" : "string"
          },
          "type" : "array",
          "exampleValue" : ""
        },
        "auditEnabled" : {
          "title" : "Audit logging",
          "description" : "Enable audit logging in OpenAM.",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.20. AuthLevelDecision

1.20.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/AuthLevelDecisionNode`

Resource version: `1.0`

1.20.1.1. create

Usage:

```
am> create AuthLevelDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authLevelRequirement" : {
      "title" : "Sufficient Authentication Level",
      "description" : "The current authentication level must be greater than or equal to this value
 for the decision to return true.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "authLevelRequirement" ]
}
```

1.20.1.2. delete

Usage:

```
am> delete AuthLevelDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.20.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthLevelDecision --realm Realm --actionName getAllTypes
```

1.20.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthLevelDecision --realm Realm --actionName getCreatableTypes
```

1.20.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action AuthLevelDecision --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.20.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthLevelDecision --realm Realm --actionName nextdescendents
```

1.20.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AuthLevelDecision --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.20.1.8. read

Usage:

```
am> read AuthLevelDecision --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.20.1.9. update

Usage:

```
am> update AuthLevelDecision --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authLevelRequirement" : {
      "title" : "Sufficient Authentication Level",
      "description" : "The current authentication level must be greater than or equal to this value
 for the decision to return true.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "authLevelRequirement" ]
}
```

1.21. AuthTree

1.21.1. Realm Operations

Authentication trees.

Resource path: `/realm-config/authentication/authenticationtrees/trees`

Resource version: `1.0`

1.21.1.1. create

Usage:

```
am> create AuthTree --realm Realm --id id --body body
```

Parameters:

`--id`

> The unique identifier for the resource.

`--body`

> The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "A tree contains a set of nodes and their connections.",
  "type" : "object",
  "title" : "Authentication Tree",
  "properties" : {
    "nodes" : {
      "type" : "object",
      "title" : "Nodes",
      "description" : "A map of node ID to node association details.",
      "patternProperties" : {
        ".*" : {
          "type" : "object",
          "title" : "Node",
          "description" : "A association of a node with a tree.",
          "properties" : {
            "connections" : {
              "type" : "object",
              "title" : "Connections",
              "description" : "The node's connected outcomes.",
              "patternProperties" : {
                ".*" : {
                  "type" : "string",
                  "title" : "Node ID",
                  "description" : "The ID of the node that this outcome connects to."
                }
              }
            },
            "_outcomes" : {
              "type" : "array",
              "title" : "Outcomes",
              "description" : "The node's complete set of outcomes.",
              "readOnly" : true,
              "items" : {
                "type" : "object",
                "title" : "Outcome",
                "description" : "A possible outcome of the node.",
                "readOnly" : true,
```

```
                  "properties" : {
                    "id" : {
                      "type" : "string",
                      "title" : "ID",
                      "description" : "The identifier of the outcome.",
                      "readOnly" : true
                    },
                    "displayName" : {
                      "type" : "string",
                      "title" : "Display Name",
                      "description" : "The display name of the outcome, in the requester's preferred
 locale.",
                      "readOnly" : true
                    }
                  }
                }
              }
            }
          }
        }
      }
    }
  }
}
```

1.21.1.2. delete

Usage:

```
am> delete AuthTree --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.21.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthTree --realm Realm --actionName getAllTypes
```

1.21.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthTree --realm Realm --actionName getCreatableTypes
```

1.21.1.5. getIds

Get the names of each tree configured in this realm.

Usage:

```
am> action AuthTree --realm Realm --actionName getIds
```

1.21.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthTree --realm Realm --actionName nextdescendents
```

1.21.1.7. query

Query for all authentication trees. Only a query filter of 'true' is supported.

Usage:

```
am> query AuthTree --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.21.1.8. read

Usage:

```
am> read AuthTree --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.21.1.9. update

Usage:

```
am> update AuthTree --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "A tree contains a set of nodes and their connections.",
  "type" : "object",
  "title" : "Authentication Tree",
  "properties" : {
    "nodes" : {
      "type" : "object",

    }
}
}
}
}
}
}
```

1.21.1.10. validate

Validates a tree giving errors and warnings.

Usage:

```
am> action AuthTree --realm Realm --body body --actionName validate
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "A tree contains a set of nodes and their connections.",
  "type" : "object",
  "title" : "Authentication Tree",
  "properties" : {
    "nodes" : {
      "type" : "object",
      "title" : "Nodes",
      "description" : "A map of node ID to node association details.",
      "patternProperties" : {
        ".*" : {
          "type" : "object",
          "title" : "Node",
          "description" : "A association of a node with a tree.",
          "properties" : {
            "connections" : {
              "type" : "object",
              "title" : "Connections",
              "description" : "The node's connected outcomes.",
              "patternProperties" : {
                ".*" : {
                  "type" : "string",
                  "title" : "Node ID",
                  "description" : "The ID of the node that this outcome connects to."
                }
              }
```

```
            },
            "_outcomes" : {
              "type" : "array",
              "title" : "Outcomes",
              "description" : "The node's complete set of outcomes.",
              "readOnly" : true,
              "items" : {
                "type" : "object",
                "title" : "Outcome",

            }
          }
        }
      }
    }
  }
}
```

1.22. Authentication

1.22.1. Realm Operations

Resource path: `/realm-config/authentication`

Resource version: `1.0`

1.22.1.1. create

Usage:

```
am> create Authentication --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",
  "properties" : {
    "accountlockout" : {
      "type" : "object",
      "title" : "Account Lockout",
      "propertyOrder" : 2,
      "properties" : {
        "loginFailureLockoutMode" : {
          "title" : "Login Failure Lockout Mode",
          "description" : "Enables account lockout functionality for users authenticating to this
 realm.<br><br>OpenAM can track the number of failed authentications by a user over time and if a pre-
defined limit is breached, OpenAM can lockout the users account and perform additional functions.<br/
><br/><i>NB </i>This functionality is in addition to any account lockout behaviour implemented by the
 LDAP Directory Server.",

1.22.1.2. delete

Usage:

```
am> delete Authentication --realm Realm
```

1.22.1.3. read

Usage:

```
am> read Authentication --realm Realm
```

1.22.1.4. update

Usage:

```
am> update Authentication --realm Realm --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

1.22.2. Global Operations

Resource path: `/global-config/authentication`

Resource version: `1.0`

1.22.2.1. read

Usage:

```
am> read Authentication --global
```

1.22.2.2. update

Usage:

```
am> update Authentication --global --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "ldapConnectionPoolSize" : {
      "title" : "LDAP Connection Pool Size",

1.23. AuthenticationChains

1.23.1. Realm Operations

Resource path: `/realm-config/authentication/chains`

Resource version: `1.0`

1.23.1.1. create

Usage:

```
am> create AuthenticationChains --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authChainConfiguration" : {
      "title" : "Authentication Configuration",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
```

```
      "exampleValue" : "",
      "type" : "array",
      "items" : {
        "type" : "object",
        "properties" : {
          "module" : {
            "type" : "string"
          },
          "criteria" : {
            "type" : "string"
          },
          "options" : {
            "type" : "object",
            "patternProperties" : {
              ".*" : {
                "type" : "string"
              }
            }
          }
        }
      }
    }
  },
  "loginFailureUrl" : {
    "title" : "Login Failed URL",
    "description" : "URL or ClientType|URL if client specific. URL without http(s) protocol will be
appended to the current URI.",
    "propertyOrder" : 300,
    "required" : true,
    "items" : {
      "type" : "string"
    },
    "type" : "array",
    "exampleValue" : ""
  },
  "loginPostProcessClass" : {
    "title" : "Authentication Post Processing Classes",
    "description" : "Example: com.abc.authentication.PostProcessClass",
    "propertyOrder" : 400,
    "required" : true,
    "items" : {
      "type" : "string"
    },
    "type" : "array",
    "exampleValue" : ""
  },
  "loginSuccessUrl" : {
    "title" : "Login Success URL",
    "description" : "URL or ClientType|URL if client specific. URL without http(s) protocol will be
appended to the current URI.",
    "propertyOrder" : 200,
    "required" : true,
    "items" : {
      "type" : "string"
    },
    "type" : "array",
    "exampleValue" : ""
  }
}
```

```
    }
```

1.23.1.2. delete

Usage:

```
am> delete AuthenticationChains --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.23.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticationChains --realm Realm --actionName getAllTypes
```

1.23.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticationChains --realm Realm --actionName getCreatableTypes
```

1.23.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticationChains --realm Realm --actionName nextdescendents
```

1.23.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AuthenticationChains --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.23.1.7. read

Usage:

```
am> read AuthenticationChains --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.23.1.8. update

Usage:

```
am> update AuthenticationChains --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authChainConfiguration" : {
      "title" : "Authentication Configuration",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "exampleValue" : "",
      "type" : "array",
      "items" : {
        "type" : "object",
        "properties" : {
          "module" : {
            "type" : "string"
```

```
        },
        "criteria" : {
          "type" : "string"
        },
        "options" : {
          "type" : "object",
          "patternProperties" : {
            ".*" : {
              "type" : "string"
            }
          }
        }
      }
    }
  }
},
"loginFailureUrl" : {
  "title" : "Login Failed URL",
  "description" : "URL or ClientType|URL if client specific. URL without http(s) protocol will be
appended to the current URI.",
  "propertyOrder" : 300,
  "required" : true,
  "items" : {
    "type" : "string"
  },
  "type" : "array",
  "exampleValue" : ""
},
"loginPostProcessClass" : {
  "title" : "Authentication Post Processing Classes",
  "description" : "Example: com.abc.authentication.PostProcessClass",
  "propertyOrder" : 400,
  "required" : true,
  "items" : {
    "type" : "string"
  },
  "type" : "array",
  "exampleValue" : ""
},
"loginSuccessUrl" : {
  "title" : "Login Success URL",
  "description" : "URL or ClientType|URL if client specific. URL without http(s) protocol will be
appended to the current URI.",
  "propertyOrder" : 200,
  "required" : true,
  "items" : {
    "type" : "string"
  },
  "type" : "array",
  "exampleValue" : ""
}
}
}
```

1.23.2. Global Operations

Resource path: `/global-config/authentication/chains`

Resource version: 1.0

1.23.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticationChains --global --actionName getAllTypes
```

1.23.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticationChains --global --actionName getCreatableTypes
```

1.23.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticationChains --global --actionName nextdescendents
```

1.23.2.4. read

Usage:

```
am> read AuthenticationChains --global
```

1.23.2.5. update

Usage:

```
am> update AuthenticationChains --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "dynamic" : {
      "properties" : {
        "authChainConfiguration" : {
          "title" : "Authentication Configuration",
          "description" : "",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Dynamic Attributes"
    }
  }
}
```

1.24. AuthenticationModules

1.24.1. Realm Operations

The collection of all authentication modules in a realm allows querying for all module instances.

Resource path: `/realm-config/authentication/modules`

Resource version: `1.0`

1.24.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticationModules --realm Realm --actionName getAllTypes
```

1.24.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticationModules --realm Realm --actionName getCreatableTypes
```

1.24.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticationModules --realm Realm --actionName nextdescendents
```

1.24.1.4. query

Query for authentication module instances

Usage:

```
am> query AuthenticationModules --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [_id]

1.24.2. Global Operations

Global and default configuration for authentication modules

Resource path: `/global-config/authentication/modules`

Resource version: `1.0`

1.24.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticationModules --global --actionName getAllTypes
```

1.24.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticationModules --global --actionName getCreatableTypes
```

1.24.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticationModules --global --actionName nextdescendents
```

1.25. AuthenticationNodes

1.25.1. Realm Operations

Auth Tree Nodes

Resource path: `/realm-config/authentication/authenticationtrees/nodes`

Resource version: `1.0`

1.25.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticationNodes --realm Realm --actionName getAllTypes
```

1.25.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticationNodes --realm Realm --actionName getCreatableTypes
```

1.25.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticationNodes --realm Realm --actionName nextdescendents
```

1.26. AuthenticationTreesConfiguration

1.26.1. Realm Operations

Sub-path parent for all authentication tree configuration.

Resource path: `/realm-config/authentication/authenticationtrees`

Resource version: `1.0`

1.26.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticationTreesConfiguration --realm Realm --actionName getAllTypes
```

1.26.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticationTreesConfiguration --realm Realm --actionName getCreatableTypes
```

1.26.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticationTreesConfiguration --realm Realm --actionName nextdescendents
```

1.26.2. Global Operations

Resource path: `/global-config/authentication/authenticationtrees`

Resource version: `1.0`

1.26.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticationTreesConfiguration --global --actionName getAllTypes
```

1.26.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticationTreesConfiguration --global --actionName getCreatableTypes
```

1.26.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticationTreesConfiguration --global --actionName nextdescendents
```

1.26.2.4. read

Usage:

```
am> read AuthenticationTreesConfiguration --global
```

1.26.2.5. update

Usage:

```
am> update AuthenticationTreesConfiguration --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object"
}
```

1.27. AuthenticatorOath

1.27.1. Realm Operations

Resource path: `/realm-config/services/authenticatorOathService`

Resource version: `1.0`

1.27.1.1. create

Usage:

```
am> create AuthenticatorOath --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticatorOATHDeviceSettingsEncryptionKeystore" : {
      "title" : "Encryption Key Store",
      "description" : "Path to the key store from which to load encryption keys.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticatorOATHDeviceSettingsEncryptionKeystoreKeyPairAlias" : {
      "title" : "Key-Pair Alias",
      "description" : "Alias of the certificate and private key in the key store. The private key is
 used to encrypt and decrypt device profiles.",
      "propertyOrder" : 600,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticatorOATHDeviceSettingsEncryptionKeystoreType" : {
      "title" : "Key Store Type",
      "description" : "Type of encryption key store.<br><br><i>Note:</i> PKCS#11 keys tores require
 hardware support such as a security device or smart card and is not available by default in most
 JVM installations.<p><p>See the <a href=\"https://docs.oracle.com/javase/8/docs/technotes/guides/
security/p11guide.html\" target=\"_blank\">JDK 8 PKCS#11 Reference Guide</a> for more details.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "oathAttrName" : {
      "title" : "Profile Storage Attribute",
      "description" : "Attribute for storing ForgeRock Authenticator OATH profiles.<br><br>The default
 attribute is added to the user store during OpenAM installation. If you want to use a different
 attribute, you must make sure to add it to your user store schema prior to deploying two-step
 verification with a ForgeRock OATH authenticator app in OpenAM. OpenAM must be able to write to the
 attribute.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticatorOATHDeviceSettingsEncryptionKeystorePrivateKeyPassword" : {
      "title" : "Private Key Password",
      "description" : "Password to unlock the private key.",
      "propertyOrder" : 700,
      "required" : false,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "authenticatorOATHSkippableName" : {
```

```
      "title" : "ForgeRock Authenticator (OATH) Device Skippable Attribute Name",
      "description" : "The data store attribute that holds the user's decision to enable or disable
obtaining and providing a password obtained from the ForgeRock Authenticator app. This attribute must
be writeable.",
      "propertyOrder" : 800,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticatorOATHDeviceSettingsEncryptionScheme" : {
      "title" : "Device Profile Encryption Scheme",
      "description" : "Encryption scheme for securing device profiles stored on the server.<br><br>If
enabled, each device profile is encrypted using a unique random secret key using the given strength
of AES encryption in CBC mode with PKCS#5 padding. An HMAC-SHA of the given strength (truncated to
half-size) is used to ensure integrity protection and authenticated encryption. The unique random
key is encrypted with the given RSA key pair and stored with the device profile.<p><p><i>Note:</i>
AES-256 may require installation of the JCE Unlimited Strength policy files.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticatorOATHDeviceSettingsEncryptionKeystorePassword" : {
      "title" : "Key Store Password",
      "description" : "Password to unlock the key store. This password will be encrypted.",
      "propertyOrder" : 500,
      "required" : false,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    }
  }
}
```

1.27.1.2. delete

Usage:

```
am> delete AuthenticatorOath --realm Realm
```

1.27.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorOath --realm Realm --actionName getAllTypes
```

1.27.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorOath --realm Realm --actionName getCreatableTypes
```

1.27.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorOath --realm Realm --actionName nextdescendents
```

1.27.1.6. read

Usage:

```
am> read AuthenticatorOath --realm Realm
```

1.27.1.7. update

Usage:

```
am> update AuthenticatorOath --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticatorOATHDeviceSettingsEncryptionKeystore" : {
      "title" : "Encryption Key Store",
      "description" : "Path to the key store from which to load encryption keys.",
      "propertyOrder" : 300,

    }
  }
```

1.27.2. Global Operations

Resource path: `/global-config/services/authenticatorOathService`

Resource version: `1.0`

1.27.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorOath --global --actionName getAllTypes
```

1.27.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorOath --global --actionName getCreatableTypes
```

1.27.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorOath --global --actionName nextdescendents
```

1.27.2.4. read

Usage:

```
am> read AuthenticatorOath --global
```

1.27.2.5. update

Usage:

```
am> update AuthenticatorOath --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "authenticatorOATHSkippableName" : {

```

1.28. AuthenticatorOathModule

1.28.1. Realm Operations

Resource path: `/realm-config/authentication/modules/authenticatoroath`

Resource version: `1.0`

1.28.1.1. create

Usage:

```
am> create AuthenticatorOathModule --realm Realm --id id --body body
```

Parameters:

--id

>   The unique identifier for the resource.

--body

>   The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "minimumSecretKeyLength" : {
      "title" : "Minimum Secret Key Length",
      "description" : "Number of hexadecimal characters allowed for the Secret Key.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "totpMaximumClockDrift" : {
      "title" : "Maximum Allowed Clock Drift",
      "description" : "Number of time steps a client is allowed to get out of sync with the server
before manual resynchronisation is required. For example, with 3 allowed drifts and a time step
interval of 30 seconds the server will allow codes from up to 90 seconds from the current time to be
treated as the current time step. The drift for a user's device is calculated each time they enter a
new code. If the drift exceeds this value, the user's authentication code will be rejected.",
      "propertyOrder" : 1000,
      "required" : true,

    }
  }
}
```

1.28.1.2. delete

Usage:

```
am> delete AuthenticatorOathModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.28.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorOathModule --realm Realm --actionName getAllTypes
```

1.28.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorOathModule --realm Realm --actionName getCreatableTypes
```

1.28.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorOathModule --realm Realm --actionName nextdescendents
```

1.28.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AuthenticatorOathModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.28.1.7. read

Usage:

```
am> read AuthenticatorOathModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.28.1.8. update

Usage:

```
am> update AuthenticatorOathModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",
  "properties" : {
    "minimumSecretKeyLength" : {
      "title" : "Minimum Secret Key Length",

1.28.2. Global Operations

Resource path: `/global-config/authentication/modules/authenticatoroath`

Resource version: `1.0`

1.28.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorOathModule --global --actionName getAllTypes
```

1.28.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorOathModule --global --actionName getCreatableTypes
```

1.28.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorOathModule --global --actionName nextdescendents
```

1.28.2.4. read

Usage:

```
am> read AuthenticatorOathModule --global
```

1.28.2.5. update

Usage:

```
am> update AuthenticatorOathModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {

    }
  }
}
```

1.29.1.2. delete

Usage:

```
am> delete AuthenticatorPush --realm Realm
```

1.29.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorPush --realm Realm --actionName getAllTypes
```

1.29.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorPush --realm Realm --actionName getCreatableTypes
```

1.29.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorPush --realm Realm --actionName nextdescendents
```

1.29.1.6. read

Usage:

```
am> read AuthenticatorPush --realm Realm
```

1.29.1.7. update

Usage:

```
am> update AuthenticatorPush --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticatorPushDeviceSettingsEncryptionKeystore" : {
      "title" : "Encryption Key Store",

  }
}
```

1.29.2. Global Operations

Resource path: `/global-config/services/authenticatorPushService`

Resource version: `1.0`

1.29.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorPush --global --actionName getAllTypes
```

1.29.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorPush --global --actionName getCreatableTypes
```

1.29.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorPush --global --actionName nextdescendents
```

1.29.2.4. read

Usage:

```
am> read AuthenticatorPush --global
```

1.29.2.5. update

Usage:

```
am> update AuthenticatorPush --global --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
```

```
    "properties" : {
      "authenticatorPushDeviceSettingsEncryptionKeystore" : {

      "title" : "Realm Defaults"
    }
  }
}
```

1.30. AuthenticatorPushModule

1.30.1. Realm Operations

Resource path: `/realm-config/authentication/modules/authPush`

Resource version: `1.0`

1.30.1.1. create

Usage:

```
am> create AuthenticatorPushModule --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "pushMessage" : {
      "title" : "Login Message",
      "description" : "Message transmitted over Push. Use the label {{user}} to replace with the
registered login's username, and {{issuer}} to replace with the name of the issuer stored at
registration.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "timeoutInMilliSecconds" : {
      "title" : "Return Message Timeout (ms)",
      "description" : "The period of time (in milliseconds) within which a push notification should be
replied to.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.30.1.2. delete

Usage:

```
am> delete AuthenticatorPushModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.30.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorPushModule --realm Realm --actionName getAllTypes
```

1.30.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorPushModule --realm Realm --actionName getCreatableTypes
```

1.30.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorPushModule --realm Realm --actionName nextdescendents
```

1.30.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AuthenticatorPushModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.30.1.7. read

Usage:

```
am> read AuthenticatorPushModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.30.1.8. update

Usage:

```
am> update AuthenticatorPushModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "pushMessage" : {
      "title" : "Login Message",
      "description" : "Message transmitted over Push. Use the label {{user}} to replace with the
 registered login's username, and {{issuer}} to replace with the name of the issuer stored at
 registration.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "timeoutInMilliSecconds" : {
      "title" : "Return Message Timeout (ms)",
      "description" : "The period of time (in milliseconds) within which a push notification should be
 replied to.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.30.2. Global Operations

Resource path: `/global-config/authentication/modules/authPush`

Resource version: `1.0`

1.30.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorPushModule --global --actionName getAllTypes
```

1.30.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorPushModule --global --actionName getCreatableTypes
```

1.30.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorPushModule --global --actionName nextdescendents
```

1.30.2.4. read

Usage:

```
am> read AuthenticatorPushModule --global
```

1.30.2.5. update

Usage:

```
am> update AuthenticatorPushModule --global --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "pushMessage" : {
          "title" : "Login Message",
          "description" : "Message transmitted over Push. Use the label {{user}} to replace with
the registered login's username, and {{issuer}} to replace with the name of the issuer stored at
registration.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "timeoutInMilliSecconds" : {
          "title" : "Return Message Timeout (ms)",
          "description" : "The period of time (in milliseconds) within which a push notification
should be replied to.",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with this module.<br><br>Each

associated with the module; 0 is the lowest (and the default).",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.31. AuthenticatorPushRegistrationModule

1.31.1. Realm Operations

Resource path: `/realm-config/authentication/modules/authPushReg`

Resource version: `1.0`

1.31.1.1. create

Usage:

```
am> create AuthenticatorPushRegistrationModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "bgcolour" : {
      "title" : "Background Colour",
      "description" : "The background colour of the image to display behind your identity issuer's
logo within the mobile app.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "issuer" : {
      "title" : "Issuer Name",
      "description" : "The Name of the service as it will appear on the registered device.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "imgUrl" : {
      "title" : "Image URL",
      "description" : "The location of the image to download and display as your identity issuer's
logo within the mobile app.",
      "propertyOrder" : 500,

      "type" : "string",
      "exampleValue" : "http://example.com/image.png"
    },
    "googleLink" : {
      "title" : "Google Play URL",
      "description" : "URL of the app to download on Google Play.",
      "propertyOrder" : 700,
```

```
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      },
      "timeoutInMilliSecconds" : {
        "title" : "Registration Response Timeout (ms)",
        "description" : "The period of time (in milliseconds) within which the registration QR code
 should be replied to.",
        "propertyOrder" : 300,
        "required" : true,
        "type" : "integer",
        "exampleValue" : ""
      },
      "appleLink" : {
        "title" : "App Store App URL",
        "description" : "URL of the app to download on the App Store.",
        "propertyOrder" : 600,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      }
    }
}
```

1.31.1.2. delete

Usage:

```
am> delete AuthenticatorPushRegistrationModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.31.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorPushRegistrationModule --realm Realm --actionName getAllTypes
```

1.31.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorPushRegistrationModule --realm Realm --actionName getCreatableTypes
```

1.31.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorPushRegistrationModule --realm Realm --actionName nextdescendents
```

1.31.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query AuthenticatorPushRegistrationModule --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.31.1.7. read

Usage:

```
am> read AuthenticatorPushRegistrationModule --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.31.1.8. update

Usage:

```
am> update AuthenticatorPushRegistrationModule --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "bgcolour" : {
      "title" : "Background Colour",
      "description" : "The background colour of the image to display behind your identity issuer's
logo within the mobile app.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "issuer" : {
      "title" : "Issuer Name",
      "description" : "The Name of the service as it will appear on the registered device.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "imgUrl" : {
      "title" : "Image URL",
      "description" : "The location of the image to download and display as your identity issuer's
logo within the mobile app.",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "string",
      "exampleValue" : "http://example.com/image.png"
    },
    "googleLink" : {
      "title" : "Google Play URL",
      "description" : "URL of the app to download on Google Play.",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "timeoutInMilliSecconds" : {
      "title" : "Registration Response Timeout (ms)",
      "description" : "The period of time (in milliseconds) within which the registration QR code
should be replied to.",
```

```
        "propertyOrder" : 300,
        "required" : true,
        "type" : "integer",
        "exampleValue" : ""
      },
      "appleLink" : {
        "title" : "App Store App URL",
        "description" : "URL of the app to download on the App Store.",
        "propertyOrder" : 600,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      }
    }
  }
}
```

1.31.2. Global Operations

Resource path: `/global-config/authentication/modules/authPushReg`

Resource version: `1.0`

1.31.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorPushRegistrationModule --global --actionName getAllTypes
```

1.31.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorPushRegistrationModule --global --actionName getCreatableTypes
```

1.31.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorPushRegistrationModule --global --actionName nextdescendents
```

1.31.2.4. read

Usage:

```
am> read AuthenticatorPushRegistrationModule --global
```

1.31.2.5. update

Usage:

```
am> update AuthenticatorPushRegistrationModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "imgUrl" : {
          "title" : "Image URL",
          "description" : "The location of the image to download and display as your identity issuer's
logo within the mobile app.",
          "propertyOrder" : 500,
          "required" : true,
          "type" : "string",
          "exampleValue" : "http://example.com/image.png"
        },
        "appleLink" : {
          "title" : "App Store App URL",
          "description" : "URL of the app to download on the App Store.",
          "propertyOrder" : 600,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with this module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default).",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "issuer" : {
          "title" : "Issuer Name",
          "description" : "The Name of the service as it will appear on the registered device.",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
```

```
        },
        "bgcolour" : {
          "title" : "Background Colour",
          "description" : "The background colour of the image to display behind your identity issuer's
logo within the mobile app.",
          "propertyOrder" : 400,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "googleLink" : {
          "title" : "Google Play URL",
          "description" : "URL of the app to download on Google Play.",
          "propertyOrder" : 700,
          "required" : true,

          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.32. AuthenticatorWebAuthn

1.32.1. Realm Operations

Resource path: `/realm-config/services/authenticatorWebAuthnService`

Resource version: `1.0`

1.32.1.1. create

Usage:

```
am> create AuthenticatorWebAuthn --realm Realm --body body
```

Parameters:

FORGEROCK

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticatorWebAuthnDeviceSettingsEncryptionKeystoreKeyPairAlias" : {
      "title" : "Key-Pair Alias",
      "description" : "Alias of the certificate and private key in the key store. The private key is
 used to encrypt and decrypt device profiles.",
      "propertyOrder" : 600,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticatorWebAuthnDeviceSettingsEncryptionKeystore" : {
      "title" : "Encryption Key Store",
      "description" : "Path to the key store from which to load encryption keys.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticatorWebAuthnDeviceSettingsEncryptionKeystorePrivateKeyPassword" : {
      "title" : "Private Key Password",
      "description" : "Password to unlock the private key.",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "authenticatorWebAuthnDeviceSettingsEncryptionKeystorePassword" : {
      "title" : "Key Store Password",
      "description" : "Password to unlock the key store. This password is encrypted when it is saved
 in the OpenAM configuration. You should modify the default value.",
      "propertyOrder" : 500,

      },
      "authenticatorWebAuthnDeviceSettingsEncryptionScheme" : {
        "title" : "Device Profile Encryption Scheme",
        "description" : "Encryption scheme to use to secure device profiles stored on the
    server.<br><br>If enabled, each device profile is encrypted using a unique random secret key
    using the given strength of AES encryption in CBC mode with PKCS#5 padding. An HMAC-SHA of the
    given strength (truncated to half-size) is used to ensure integrity protection and authenticated
    encryption. The unique random key is encrypted with the given RSA key pair and stored with the device
    profile.<p><p><i>Note:</i> AES-256 may require installation of the JCE Unlimited Strength policy
    files.",
        "propertyOrder" : 200,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      }
    }
}
```

1.32.1.2. delete

Usage:

```
am> delete AuthenticatorWebAuthn --realm Realm
```

1.32.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorWebAuthn --realm Realm --actionName getAllTypes
```

1.32.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorWebAuthn --realm Realm --actionName getCreatableTypes
```

1.32.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorWebAuthn --realm Realm --actionName nextdescendents
```

1.32.1.6. read

Usage:

```
am> read AuthenticatorWebAuthn --realm Realm
```

1.32.1.7. update

Usage:

```
am> update AuthenticatorWebAuthn --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticatorWebAuthnDeviceSettingsEncryptionKeystoreKeyPairAlias" : {
      "title" : "Key-Pair Alias",
      "description" : "Alias of the certificate and private key in the key store. The private key is
 used to encrypt and decrypt device profiles.",

    }
  }
}
```

1.32.2. Global Operations

Resource path: `/global-config/services/authenticatorWebAuthnService`

Resource version: `1.0`

1.32.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action AuthenticatorWebAuthn --global --actionName getAllTypes
```

1.32.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action AuthenticatorWebAuthn --global --actionName getCreatableTypes
```

1.32.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action AuthenticatorWebAuthn --global --actionName nextdescendents
```

1.32.2.4. read

Usage:

```
am> read AuthenticatorWebAuthn --global
```

1.32.2.5. update

Usage:

```
am> update AuthenticatorWebAuthn --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "authenticatorWebAuthnDeviceSettingsEncryptionKeystoreType" : {
          "title" : "Key Store Type",

```

1.33. BaseUrlSource

1.33.1. Realm Operations

Resource path: `/realm-config/services/baseurl`

Resource version: `1.0`

1.33.1.1. create

Usage:

```
am> create BaseUrlSource --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "source" : {
      "title" : "Base URL Source",
      "description" : "Specifies the source of the base URL. Choose from the
following:<ul> <li>Extension class. Specifies that the extension class returns a
base URL from a provided HttpServletRequest. In the Extension class name field, enter
<code>org.forgerock.openam.services.baseurl.BaseURLProvider</code>.</li><li>Fixed value. Specifies
that the base URL is retrieved from a specific base URL value. In the Fixed value base URL field,
enter the base URL value.</li><li>Forwarded header. Specifies that the base URL is retrieved from
a forwarded header field in the HTTP request. The Forwarded HTTP header field is standardized and
specified in <a href=\"https://tools.ietf.org/html/rfc7239\">RFC7239</a>.</li><li>Host/protocol
from incoming request. Specifies that the hostname, server name, and port are retrieved from the
incoming HTTP request.</li><li>X-Forwarded-* headers. Specifies that the base URL is retrieved from
non-standard header fields, such as <code>X-Forwarded-For</code>, <code>X-Forwarded-By</code>, and
<code>X-Forwarded-Proto</code>.</li></ul>",
      "propertyOrder" : 100,
      "required" : true,
```

```
        "type" : "string",
        "exampleValue" : ""
      },
      "fixedValue" : {
        "title" : "Fixed value base URL",
        "description" : "If Fixed value is selected as the Base URL source, enter the base URL in the
 Fixed value base URL field.",

        "type" : "string",
        "exampleValue" : ""
    }
  }
}
```

1.33.1.2. delete

Usage:

```
am> delete BaseUrlSource --realm Realm
```

1.33.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action BaseUrlSource --realm Realm --actionName getAllTypes
```

1.33.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action BaseUrlSource --realm Realm --actionName getCreatableTypes
```

1.33.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action BaseUrlSource --realm Realm --actionName nextdescendents
```

1.33.1.6. read

Usage:

```
am> read BaseUrlSource --realm Realm
```

1.33.1.7. update

Usage:

```
am> update BaseUrlSource --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "source" : {
      "title" : "Base URL Source",
      "description" : "Specifies the source of the base URL. Choose from the
following:<ul> <li>Extension class. Specifies that the extension class returns a
base URL from a provided HttpServletRequest. In the Extension class name field, enter
<code>org.forgerock.openam.services.baseurl.BaseURLProvider</code>.</li><li>Fixed value. Specifies
that the base URL is retrieved from a specific base URL value. In the Fixed value base URL field,
enter the base URL value.</li><li>Forwarded header. Specifies that the base URL is retrieved from
a forwarded header field in the HTTP request. The Forwarded HTTP header field is standardized and
specified in <a href=\"https://tools.ietf.org/html/rfc7239\">RFC7239</a>.</li><li>Host/protocol
from incoming request. Specifies that the hostname, server name, and port are retrieved from the
incoming HTTP request.</li><li>X-Forwarded-* headers. Specifies that the base URL is retrieved from
non-standard header fields, such as <code>X-Forwarded-For</code>, <code>X-Forwarded-By</code>, and
<code>X-Forwarded-Proto</code>.</li></ul>",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
```

```
    },
    "fixedValue" : {
      "title" : "Fixed value base URL",
      "description" : "If Fixed value is selected as the Base URL source, enter the base URL in the
 Fixed value base URL field.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "contextPath" : {
      "title" : "Context path",
      "description" : "Specifies the context path for the base URL.<p><p>If provided, the base URL
 includes the deployment context path appended to the calculated URL.<p>For example, <code>/openam</
code>.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "extensionClassName" : {
      "title" : "Extension class name",
      "description" : "If Extension class is selected as the Base URL source, enter
 <code>org.forgerock.openam.services.baseurl.BaseURLProvider</code> in the Extension class name
 field.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.33.2. Global Operations

Resource path: `/global-config/services/baseurl`

Resource version: `1.0`

1.33.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action BaseUrlSource --global --actionName getAllTypes
```

1.33.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action BaseUrlSource --global --actionName getCreatableTypes
```

1.33.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action BaseUrlSource --global --actionName nextdescendents
```

1.33.2.4. read

Usage:

```
am> read BaseUrlSource --global
```

1.33.2.5. update

Usage:

```
am> update BaseUrlSource --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "extensionClassName" : {
          "title" : "Extension class name",
          "description" : "If Extension class is selected as the Base URL source, enter
<code>org.forgerock.openam.services.baseurl.BaseURLProvider</code> in the Extension class name
field.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "fixedValue" : {
          "title" : "Fixed value base URL",
          "description" : "If Fixed value is selected as the Base URL source, enter the base URL in
the Fixed value base URL field.",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
```

```
        },
        "source" : {
          "title" : "Base URL Source",
          "description" : "Specifies the source of the base URL. Choose from the

          "propertyOrder" : 400,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.34. CRESTReporter

1.34.1. Global Operations

Resource path: `/global-config/services/monitoring/crest`

Resource version: `1.0`

1.34.1.1. create

Usage:

```
am> create CRESTReporter --global --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "enabled" : {
      "title" : "Enabled",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    }
  }
}
```

1.34.1.2. delete

Usage:

```
am> delete CRESTReporter --global --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.34.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action CRESTReporter --global --actionName getAllTypes
```

1.34.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action CRESTReporter --global --actionName getCreatableTypes
```

1.34.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action CRESTReporter --global --actionName nextdescendents
```

1.34.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query CRESTReporter --global --filter filter
```

Parameters:

--filter

   A CREST formatted query filter, where "true" will query all.

1.34.1.7. read

Usage:

```
am> read CRESTReporter --global --id id
```

Parameters:

--id

   The unique identifier for the resource.

1.34.1.8. update

Usage:

```
am> update CRESTReporter --global --id id --body body
```

Parameters:

--id

   The unique identifier for the resource.

--body

   The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "enabled" : {
      "title" : "Enabled",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    }
  }
}
```

1.35. CertificateModule

1.35.1. Realm Operations

Resource path: `/realm-config/authentication/modules/certificate`

Resource version: `1.0`

1.35.1.1. create

Usage:

```
am> create CertificateModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "certificateAttributeProfileMappingExtension" : {
      "title" : "SubjectAltNameExt Value Type to Access User Profile",
      "description" : "Use the Subject Alternative Name Field in preference to one of the standard
 certificate fields.<br><br>Selecting RFC822Name or UPN will cause this field to have have precedence
 over the <i>Certificate Field Used to Access User Profile</i> or <i>Other Certificate Field Used
 to Access User Profile</i> attribute.<br/><br/><i>NB </i>The client certificate must contain the
 <i>Subject Alternate Name Extension</i> for this function to operate.",

  }
}
```

1.35.1.2. delete

Usage:

```
am> delete CertificateModule --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.35.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action CertificateModule --realm Realm --actionName getAllTypes
```

1.35.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action CertificateModule --realm Realm --actionName getCreatableTypes
```

1.35.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action CertificateModule --realm Realm --actionName nextdescendents
```

1.35.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query CertificateModule --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.35.1.7. read

Usage:

```
am> read CertificateModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.35.1.8. update

Usage:

```
am> update CertificateModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "certificateAttributeProfileMappingExtension" : {
      "title" : "SubjectAltNameExt Value Type to Access User Profile",
      "description" : "Use the Subject Alternative Name Field in preference to one of the standard
 certificate fields.<br><br>Selecting RFC822Name or UPN will cause this field to have have precedence
 over the <i>Certificate Field Used to Access User Profile</i> or <i>Other Certificate Field Used

1.35.2. Global Operations

Resource path: `/global-config/authentication/modules/certificate`

Resource version: `1.0`

1.35.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action CertificateModule --global --actionName getAllTypes
```

1.35.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action CertificateModule --global --actionName getCreatableTypes
```

1.35.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action CertificateModule --global --actionName nextdescendents
```

1.35.2.4. read

Usage:

```
am> read CertificateModule --global
```

1.35.2.5. update

Usage:

```
am> update CertificateModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```

1.36. ChoiceCollector

1.36.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/ChoiceCollectorNode`

Resource version: `1.0`

1.36.1.1. create

Usage:

```
am> create ChoiceCollector --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "prompt" : {
      "title" : "Prompt",
      "description" : "Prompt displayed on the choice page",
      "propertyOrder" : 300,
      "type" : "string",
      "exampleValue" : ""
    },
    "choices" : {
      "title" : "Choices",
      "description" : "List of values that represents the choices for the user",
      "propertyOrder" : 100,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "defaultChoice" : {
      "title" : "Default Choice",
      "description" : "The default selected choice value",
      "propertyOrder" : 200,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "prompt", "choices", "defaultChoice" ]
}
```

1.36.1.2. delete

Usage:

```
am> delete ChoiceCollector --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.36.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ChoiceCollector --realm Realm --actionName getAllTypes
```

1.36.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ChoiceCollector --realm Realm --actionName getCreatableTypes
```

1.36.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action ChoiceCollector --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.36.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ChoiceCollector --realm Realm --actionName nextdescendents
```

1.36.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ChoiceCollector --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.36.1.8. read

Usage:

```
am> read ChoiceCollector --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.36.1.9. update

Usage:

```
am> update ChoiceCollector --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "prompt" : {
      "title" : "Prompt",
      "description" : "Prompt displayed on the choice page",
      "propertyOrder" : 300,
      "type" : "string",
      "exampleValue" : ""
    },
    "choices" : {
      "title" : "Choices",
      "description" : "List of values that represents the choices for the user",
      "propertyOrder" : 100,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "defaultChoice" : {
      "title" : "Default Choice",
      "description" : "The default selected choice value",
      "propertyOrder" : 200,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "prompt", "choices", "defaultChoice" ]
}
```

1.37. CircleOfTrust

1.37.1. Realm Operations

Resource path: `/realm-config/federation/circlesoftrust`

Resource version: `1.0`

1.37.1.1. create

Usage:

```
am> create CircleOfTrust --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",
  "properties" : {
    "status" : {
      "title" : "Status",
      "description" : "",
      "propertyOrder" : 200,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "saml2WriterServiceUrl" : {
      "title" : "SAML2 Writer Service URL",
      "description" : "Location of the SAML2 Writer service that writes the cookie to the Common
Domain.",
      "propertyOrder" : 400,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "description" : {
      "title" : "Description",
      "description" : "",
      "propertyOrder" : 100,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "trustedProviders" : {
      "title" : "Entity Providers",
      "description" : "Minimum requirements for a circle of trust are one identity provider and one
service provider.",
      "propertyOrder" : 300,
      "required" : false,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "saml2ReaderServiceUrl" : {
      "title" : "SAML2 Reader Service URL",
      "description" : "Location of the SAML2 Reader service that reads the cookie from the Common
Domain.",
      "propertyOrder" : 500,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.37.1.2. delete

Usage:

```
am> delete CircleOfTrust --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.37.1.3. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query CircleOfTrust --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.37.1.4. read

Usage:

```
am> read CircleOfTrust --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.37.1.5. update

Usage:

```
am> update CircleOfTrust --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "status" : {
      "title" : "Status",
      "description" : "",
      "propertyOrder" : 200,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "saml2WriterServiceUrl" : {
      "title" : "SAML2 Writer Service URL",
      "description" : "Location of the SAML2 Writer service that writes the cookie to the Common
Domain.",
      "propertyOrder" : 400,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "description" : {
      "title" : "Description",
      "description" : "",
      "propertyOrder" : 100,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "trustedProviders" : {
      "title" : "Entity Providers",
      "description" : "Minimum requirements for a circle of trust are one identity provider and one
service provider.",
      "propertyOrder" : 300,
      "required" : false,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "saml2ReaderServiceUrl" : {
      "title" : "SAML2 Reader Service URL",
      "description" : "Location of the SAML2 Reader service that reads the cookie from the Common
Domain.",
      "propertyOrder" : 500,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    }
  }
```

```
}
```

1.38. CommonFederationConfiguration

1.38.1. Global Operations

Resource path: `/global-config/services/federation/common`

Resource version: `1.0`

1.38.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:
```
am> action CommonFederationConfiguration --global --actionName getAllTypes
```

1.38.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:
```
am> action CommonFederationConfiguration --global --actionName getCreatableTypes
```

1.38.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:
```
am> action CommonFederationConfiguration --global --actionName nextdescendents
```

1.38.1.4. read

Usage:
```
am> read CommonFederationConfiguration --global
```

1.38.1.5. update

Usage:
```
am> update CommonFederationConfiguration --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

```

1.39. ConditionTypes

1.39.1. Realm Operations

Service for querying and reading the environment condition types stored in OpenAM. Environment condition types describe the JSON representation of environment conditions that you can use in policy definitions

Resource path: `/conditiontypes`

Resource version: `1.0`

1.39.1.1. query

Query the list of environment condition types

Usage:

```
am> query ConditionTypes --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

1.39.1.2. read

Read an individual environment condition type by providing the unique identifier title

Usage:

```
am> read ConditionTypes --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.40. CookiePresenceDecisionNode

1.40.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/CookiePresenceDecisionNode`

Resource version: 1.0

1.40.1.1. create

Usage:
```
am> create CookiePresenceDecisionNode --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:
> ```
> {
>   "type" : "object",
>   "properties" : {
>     "cookieName" : {
>       "title" : "Name of Cookie",
>       "description" : "",
>       "propertyOrder" : 100,
>       "type" : "string",
>       "exampleValue" : ""
>     }
>   },
>   "required" : [ "cookieName" ]
> }
> ```

1.40.1.2. delete

Usage:
```
am> delete CookiePresenceDecisionNode --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.40.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:
```
am> action CookiePresenceDecisionNode --realm Realm --actionName getAllTypes
```

1.40.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action CookiePresenceDecisionNode --realm Realm --actionName getCreatableTypes
```

1.40.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action CookiePresenceDecisionNode --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "title" : "Some configuration of the node. This does not need to be complete against the
>  configuration schema."
> }
> ```

1.40.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action CookiePresenceDecisionNode --realm Realm --actionName nextdescendents
```

1.40.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query CookiePresenceDecisionNode --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.40.1.8. read

Usage:

```
am> read CookiePresenceDecisionNode --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.40.1.9. update

Usage:

```
am> update CookiePresenceDecisionNode --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "cookieName" : {
      "title" : "Name of Cookie",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "cookieName" ]
}
```

1.41. CreatePassword

1.41.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/CreatePasswordNode`

Resource version: `1.0`

1.41.1.1. create

Usage:

```
am> create CreatePassword --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "minPasswordLength" : {
      "title" : "minPasswordLength",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "minPasswordLength" ]
}
```

1.41.1.2. delete

Usage:

```
am> delete CreatePassword --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.41.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action CreatePassword --realm Realm --actionName getAllTypes
```

1.41.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action CreatePassword --realm Realm --actionName getCreatableTypes
```

1.41.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action CreatePassword --realm Realm --body body --actionName listOutcomes
```

Parameters:

`--body`

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "title" : "Some configuration of the node. This does not need to be complete against the
>  configuration schema."
> }
> ```

1.41.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action CreatePassword --realm Realm --actionName nextdescendents
```

1.41.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query CreatePassword --realm Realm --filter filter
```

Parameters:

`--filter`

> A CREST formatted query filter, where "true" will query all.

1.41.1.8. read

Usage:

```
am> read CreatePassword --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.41.1.9. update

Usage:
```
am> update CreatePassword --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:
> ```
> {
>   "type" : "object",
>   "properties" : {
>     "minPasswordLength" : {
>       "title" : "minPasswordLength",
>       "description" : "",
>       "propertyOrder" : 100,
>       "type" : "integer",
>       "exampleValue" : ""
>     }
>   },
>   "required" : [ "minPasswordLength" ]
> }
> ```

1.42. Csv

1.42.1. Realm Operations

Resource path: `/realm-config/services/audit/CSV`

Resource version: `1.0`

1.42.1.1. create

Usage:
```
am> create Csv --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonHandlerPlugin" : {
      "type" : "object",

        }
      }
    }
  }
}
```

1.42.1.2. delete

Usage:

```
am> delete Csv --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.42.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Csv --realm Realm --actionName getAllTypes
```

1.42.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Csv --realm Realm --actionName getCreatableTypes
```

1.42.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Csv --realm Realm --actionName nextdescendents
```

1.42.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Csv --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.42.1.7. read

Usage:

```
am> read Csv --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.42.1.8. update

Usage:

```
am> update Csv --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonHandlerPlugin" : {
      "type" : "object",

1.42.2. Global Operations

Resource path: `/global-config/services/audit/CSV`

Resource version: `1.0`

1.42.2.1. create

Usage:

```
am> create Csv --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "csvBuffering" : {
      "type" : "object",
      "title" : "Buffering",
      "propertyOrder" : 5,
      "properties" : {
        "bufferingEnabled" : {
          "title" : "Buffering Enabled",
          "description" : "Enables or disables buffering.",
          "propertyOrder" : 1500,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        },
```

```
            "bufferingAutoFlush" : {
              "title" : "Flush Each Event Immediately",
              "description" : "Performance may be improved by writing all buffered events before
flushing.",
              "propertyOrder" : 1600,
              "required" : true,

    }
  }
}
```

1.42.2.2. delete

Usage:

```
am> delete Csv --global --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.42.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Csv --global --actionName getAllTypes
```

1.42.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Csv --global --actionName getCreatableTypes
```

1.42.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Csv --global --actionName nextdescendents
```

1.42.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Csv --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.42.2.7. read

Usage:

```
am> read Csv --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.42.2.8. update

Usage:

```
am> update Csv --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",
  "properties" : {

1.43. CtsDataStoreProperties

1.43.1. Global Operations

An object of property key-value pairs

Resource path: `/global-config/servers/{serverName}/properties/cts`

Resource version: `1.0`

1.43.1.1. read

Usage:

```
am> read CtsDataStoreProperties --global --serverName serverName
```

Parameters:

`--serverName`

An object of property key-value pairs

1.43.1.2. update

Usage:

```
am> update CtsDataStoreProperties --global --serverName serverName --body body
```

Parameters:

`--serverName`

An object of property key-value pairs

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "amconfig.org.forgerock.services.cts.store.common.section" : {
      "title" : "CTS Token Store",

```

1.44. Dashboard

1.44.1. Realm Operations

Resource path: `/realm-config/services/dashboard`

Resource version: `1.0`

1.44.1.1. create

Usage:

```
am> create Dashboard --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "assignedDashboard" : {
      "title" : "Available Dashboard Apps",
      "description" : "List of application dashboard names available by default for realms with the
 Dashboard service configured.",
      "propertyOrder" : 700,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.44.1.2. delete

Usage:

```
am> delete Dashboard --realm Realm
```

1.44.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Dashboard --realm Realm --actionName getAllTypes
```

1.44.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Dashboard --realm Realm --actionName getCreatableTypes
```

1.44.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Dashboard --realm Realm --actionName nextdescendents
```

1.44.1.6. read

Usage:

```
am> read Dashboard --realm Realm
```

1.44.1.7. update

Usage:

```
am> update Dashboard --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "assignedDashboard" : {
      "title" : "Available Dashboard Apps",
      "description" : "List of application dashboard names available by default for realms with the
 Dashboard service configured.",
      "propertyOrder" : 700,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.44.2. Global Operations

Resource path: `/global-config/services/dashboard`

Resource version: `1.0`

1.44.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Dashboard --global --actionName getAllTypes
```

1.44.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Dashboard --global --actionName getCreatableTypes
```

1.44.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Dashboard --global --actionName nextdescendents
```

1.44.2.4. read

Usage:

```
am> read Dashboard --global
```

1.44.2.5. update

Usage:

```
am> update Dashboard --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "assignedDashboard" : {
          "title" : "Available Dashboard Apps",
          "description" : "List of application dashboard names available by default for realms with
 the Dashboard service configured.",
          "propertyOrder" : 700,
          "required" : true,
          "items" : {
            "type" : "string"
          },
          "type" : "array",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.45. DashboardInstance

1.45.1. Global Operations

Resource path: `/global-config/services/dashboard/instances`

Resource version: `1.0`

1.45.1.1. create

Usage:

```
am> create DashboardInstance --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
```

```
  "properties" : {
    "icfIdentifier" : {
      "title" : "ICF Identifier",
      "description" : "",
      "propertyOrder" : 600,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "displayName" : {
      "title" : "Dashboard Display Name",
      "description" : "The application name that displays on the dashboard client.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "name" : {
      "title" : "Dashboard Name",
      "description" : "The application name as it will appear to the administrator for configuring the
dashboard.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "icon" : {
      "title" : "Dashboard Icon",
      "description" : "The icon name that will be displayed on the dashboard client identifying the
application.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "login" : {
      "title" : "Dashboard Login",
      "description" : "The URL that takes the user to the application.",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "className" : {
      "title" : "Dashboard Class Name",
      "description" : "Identifies how to access the application, for example
<code>SAML2ApplicationClass</code> for a SAML v2.0 application.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.45.1.2. delete

Usage:

```
am> delete DashboardInstance --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.45.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DashboardInstance --global --actionName getAllTypes
```

1.45.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DashboardInstance --global --actionName getCreatableTypes
```

1.45.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DashboardInstance --global --actionName nextdescendents
```

1.45.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query DashboardInstance --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.45.1.7. read

Usage:

```
am> read DashboardInstance --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.45.1.8. update

Usage:

```
am> update DashboardInstance --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "icfIdentifier" : {
      "title" : "ICF Identifier",
      "description" : "",
      "propertyOrder" : 600,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "displayName" : {
      "title" : "Dashboard Display Name",
      "description" : "The application name that displays on the dashboard client.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "name" : {
      "title" : "Dashboard Name",
      "description" : "The application name as it will appear to the administrator for configuring the
  dashboard.",
```

```
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "icon" : {
      "title" : "Dashboard Icon",
      "description" : "The icon name that will be displayed on the dashboard client identifying the
application.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "login" : {
      "title" : "Dashboard Login",
      "description" : "The URL that takes the user to the application.",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "className" : {
      "title" : "Dashboard Class Name",
      "description" : "Identifies how to access the application, for example
<code>SAML2ApplicationClass</code> for a SAML v2.0 application.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.46. DashboardUserService

1.46.1. Realm Operations

Resource path: `/users/{user}/services/dashboard`

Resource version: `1.0`

1.46.1.1. create

Usage:

```
am> create DashboardUserService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "assignedDashboard" : {
      "title" : "Assigned Dashboard",
      "description" : "",
      "propertyOrder" : 800,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.46.1.2. delete

Usage:

```
am> delete DashboardUserService --realm Realm
```

1.46.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DashboardUserService --realm Realm --user user --actionName getAllTypes
```

Parameters:

--user

1.46.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DashboardUserService --realm Realm --user user --actionName getCreatableTypes
```

Parameters:

--user

1.46.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DashboardUserService --realm Realm --user user --actionName nextdescendents
```

Parameters:

--user

1.46.1.6. read

Usage:

```
am> read DashboardUserService --realm Realm
```

1.46.1.7. unassignServices

action.unassignServices.description

Usage:

```
am> action DashboardUserService --realm Realm --body body --user user --actionName unassignServices
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "i18n:api-descriptor/UserServicesResource#schema.description",
  "type" : "object",
  "title" : "i18n:api-descriptor/UserServicesResource#schema.title",
  "properties" : {
    "serviceNames" : {
      "type" : "array",
      "title" : "i18n:api-descriptor/UserServicesResource#schema.servicename.title",
      "description" : "i18n:api-descriptor/UserServicesResource#schema.servicename.description",
      "items" : {
        "type" : "string"
      }
    }
  }
}
```

--user

1.46.1.8. update

Usage:

```
am> update DashboardUserService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "assignedDashboard" : {
      "title" : "Assigned Dashboard",
      "description" : "",
      "propertyOrder" : 800,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.47. Dashboards

1.47.1. Realm Operations

The dashboard service is responsible for returning information from the Dashboard. The only supported operation is read.

Resource path: `/dashboard`

Resource version: `1.0`

1.47.1.1. read

Read dashboard information

Usage:

```
am> read Dashboards --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.48. DataStoreDecision

1.48.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/DataStoreDecisionNode`

Resource version: `1.0`

1.48.1.1. create

Usage:

```
am> create DataStoreDecision --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "required" : [ ]
> }
> ```

1.48.1.2. delete

Usage:

```
am> delete DataStoreDecision --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.48.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DataStoreDecision --realm Realm --actionName getAllTypes
```

1.48.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DataStoreDecision --realm Realm --actionName getCreatableTypes
```

1.48.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action DataStoreDecision --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.48.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DataStoreDecision --realm Realm --actionName nextdescendents
```

1.48.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query DataStoreDecision --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.48.1.8. read

Usage:

```
am> read DataStoreDecision --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.48.1.9. update

Usage:

```
am> update DataStoreDecision --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "required" : [ ]
> }
> ```

1.49. DataStoreInstance

1.49.1. Global Operations

Resource path: /global-config/services/DataStoreService/config

Resource version: 1.0

1.49.1.1. create

Usage:

```
am> create DataStoreInstance --global --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "affinityEnabled" : {
      "title" : "Affinity Enabled",
      "description" : "",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "bindDN" : {
      "title" : "Bind DN",
      "description" : "",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "serverUrls" : {
      "title" : "Host Urls",
      "description" : "An ordered list of connection strings for LDAP directories.Each connection
 string is composed as follows: HOST:PORT. serverHostname = Host Name",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "useStartTLS" : {
      "title" : "Start TLS",
      "description" : "",
      "propertyOrder" : 900,
      "required" : true,
      "type" : "boolean",
```

```
      "exampleValue" : ""
    },
    "useSsl" : {
      "title" : "Use SSL",
      "description" : "",
      "propertyOrder" : 800,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "bindPassword" : {
      "title" : "Bind Password",
      "description" : "",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "minimumConnectionPool" : {
      "title" : "Minimum Connection Pool Size",
      "description" : "",
      "propertyOrder" : 600,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "maximumConnectionPool" : {
      "title" : "Maximum Connection Pool Size",
      "description" : "",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.49.1.2. delete

Usage:

```
am> delete DataStoreInstance --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.49.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DataStoreInstance --global --actionName getAllTypes
```

1.49.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DataStoreInstance --global --actionName getCreatableTypes
```

1.49.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DataStoreInstance --global --actionName nextdescendents
```

1.49.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query DataStoreInstance --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.49.1.7. read

Usage:

```
am> read DataStoreInstance --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.49.1.8. update

Usage:

```
am> update DataStoreInstance --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "affinityEnabled" : {
      "title" : "Affinity Enabled",
      "description" : "",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "bindDN" : {
      "title" : "Bind DN",
      "description" : "",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "serverUrls" : {
      "title" : "Host Urls",
      "description" : "An ordered list of connection strings for LDAP directories.Each connection
string is composed as follows: HOST:PORT. serverHostname = Host Name",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "useStartTLS" : {
      "title" : "Start TLS",
      "description" : "",
      "propertyOrder" : 900,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "useSsl" : {
      "title" : "Use SSL",
      "description" : "",
      "propertyOrder" : 800,
      "required" : true,
```

```
      "type" : "boolean",
      "exampleValue" : ""
    },
    "bindPassword" : {
      "title" : "Bind Password",
      "description" : "",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "minimumConnectionPool" : {
      "title" : "Minimum Connection Pool Size",
      "description" : "",
      "propertyOrder" : 600,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "maximumConnectionPool" : {
      "title" : "Maximum Connection Pool Size",
      "description" : "",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.50. DataStoreModule

1.50.1. Realm Operations

Resource path: `/realm-config/authentication/modules/datastore`

Resource version: `1.0`

1.50.1.1. create

Usage:

```
am> create DataStoreModule --realm Realm --id id --body body
```

Parameters:

--id

    The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.50.1.2. delete

Usage:

```
am> delete DataStoreModule --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.50.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DataStoreModule --realm Realm --actionName getAllTypes
```

1.50.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DataStoreModule --realm Realm --actionName getCreatableTypes
```

1.50.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DataStoreModule --realm Realm --actionName nextdescendents
```

1.50.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query DataStoreModule --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.50.1.7. read

Usage:

```
am> read DataStoreModule --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.50.1.8. update

Usage:

```
am> update DataStoreModule --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.50.2. Global Operations

Resource path: `/global-config/authentication/modules/datastore`

Resource version: `1.0`

1.50.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DataStoreModule --global --actionName getAllTypes
```

1.50.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DataStoreModule --global --actionName getCreatableTypes
```

1.50.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DataStoreModule --global --actionName nextdescendents
```

1.50.2.4. read

Usage:

```
am> read DataStoreModule --global
```

1.50.2.5. update

Usage:

```
am> update DataStoreModule --global --body body
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.51. DataStoreService

1.51.1. Realm Operations

Resource path: `/realm-config/services/DataStoreService`

Resource version: `1.0`

1.51.1.1. create

Usage:

```
am> create DataStoreService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "applicationDataStoreId" : {
      "title" : "Application Data Store",
      "description" : "Select a data store configuration to be used for application storage",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "policyDataStoreId" : {
      "title" : "Policy Data Store",
      "description" : "Select a data store configuration to be used for policy storage",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.51.1.2. delete

Usage:

```
am> delete DataStoreService --realm Realm
```

1.51.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DataStoreService --realm Realm --actionName getAllTypes
```

1.51.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DataStoreService --realm Realm --actionName getCreatableTypes
```

1.51.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DataStoreService --realm Realm --actionName nextdescendents
```

1.51.1.6. read

Usage:

```
am> read DataStoreService --realm Realm
```

1.51.1.7. update

Usage:

```
am> update DataStoreService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "applicationDataStoreId" : {
      "title" : "Application Data Store",
      "description" : "Select a data store configuration to be used for application storage",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "policyDataStoreId" : {
      "title" : "Policy Data Store",
      "description" : "Select a data store configuration to be used for policy storage",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.51.2. Global Operations

Resource path: `/global-config/services/DataStoreService`

Resource version: `1.0`

1.51.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DataStoreService --global --actionName getAllTypes
```

1.51.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DataStoreService --global --actionName getCreatableTypes
```

1.51.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DataStoreService --global --actionName nextdescendents
```

1.51.2.4. read

Usage:

```
am> read DataStoreService --global
```

1.51.2.5. update

Usage:

```
am> update DataStoreService --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "applicationDataStoreId" : {
          "title" : "Application Data Store",
          "description" : "Select a data store configuration to be used for application storage",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "policyDataStoreId" : {
          "title" : "Policy Data Store",
          "description" : "Select a data store configuration to be used for policy storage",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.52. DecisionCombiners

1.52.1. Realm Operations

Service for querying and reading decision combiners information. Decision combiners describe how to resolve policy decisions when multiple policies apply

Resource path: `/decisioncombiners`

Resource version: `1.0`

1.52.1.1. query

Lists all decision combiners

Usage:

```
am> query DecisionCombiners --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [title]

1.52.1.2. read

Reads an individual decision combiner specified by its name

Usage:

```
am> read DecisionCombiners --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.53. DefaultAdvancedProperties

1.53.1. Global Operations

An object of property key-value pairs

Resource path: `/global-config/servers/server-default/properties/advanced`

Resource version: `1.0`

1.53.1.1. read

Usage:

```
am> read DefaultAdvancedProperties --global
```

1.53.1.2. update

Usage:

```
am> update DefaultAdvancedProperties --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "patternProperties" : {
    ".+" : {
      "type" : "string",
      "title" : "Value",
      "description" : "Any string value"
    }
  },
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "An object of property key-value pairs",
  "type" : "object",
  "title" : "Advanced Properties"
}
```

1.54. DefaultCtsDataStoreProperties

1.54.1. Global Operations

An object of property key-value pairs

Resource path: `/global-config/servers/server-default/properties/cts`

Resource version: `1.0`

1.54.1.1. read

Usage:

```
am> read DefaultCtsDataStoreProperties --global
```

1.54.1.2. update

Usage:

```
am> update DefaultCtsDataStoreProperties --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "amconfig.org.forgerock.services.cts.store.common.section" : {
      "title" : "CTS Token Store",
      "type" : "object",
      "propertyOrder" : 0,
```

```
      "properties" : {
        "org.forgerock.services.cts.store.location" : {
          "enum" : [ "default", "external" ],
          "options" : {
            "enum_titles" : [ "Default Token Store", "External Token Store" ]
          },
          "type" : "string",
          "title" : "Store Mode",
          "propertyOrder" : 0,
          "required" : true,
          "description" : ""
        },
        "org.forgerock.services.cts.store.root.suffix" : {
          "type" : "string",
          "title" : "Root Suffix",
          "propertyOrder" : 1,
          "required" : true,
          "description" : ""
        },
        "org.forgerock.services.cts.store.max.connections" : {
          "type" : "string",

        "description" : "Enables affinity based request load balancing when accessing the CTS
 servers. It is imperative that the connection string setting is set to the same value for all OpenAM
 servers in the deployment when this feature is enabled."
      }
    }
  }
 }
}
```

1.55. DefaultDirectoryConfiguration

1.55.1. Global Operations

Connection details for directory server(s).

Resource path: `/global-config/servers/server-default/properties/directoryConfiguration`

Resource version: `1.0`

1.55.1.1. read

Usage:

```
am> read DefaultDirectoryConfiguration --global
```

1.55.1.2. update

Usage:

```
am> update DefaultDirectoryConfiguration --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "directoryConfiguration" : {
      "type" : "object",
      "title" : "Directory Configuration",
      "propertyOrder" : 0,
      "properties" : {

```

1.57. DefaultSdkProperties

1.57.1. Global Operations

An object of property key-value pairs

Resource path: `/global-config/servers/server-default/properties/sdk`

Resource version: `1.0`

1.57.1.1. read

Usage:

```
am> read DefaultSdkProperties --global
```

1.57.1.2. update

Usage:

```
am> update DefaultSdkProperties --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "amconfig.header.datastore" : {
      "title" : "Data Store",
      "type" : "object",
      "propertyOrder" : 0,
      "properties" : {
        "com.sun.identity.sm.enableDataStoreNotification" : {
          "type" : "boolean",
          "title" : "Enable Datastore Notification",
```

```
          "propertyOrder" : 0,
          "required" : true,
          "description" : "Specifies if backend datastore notification is enabled. If
this value is set to 'false', then in-memory notification is enabled. (property name:
com.sun.identity.sm.enableDataStoreNotification)"
        },
        "com.sun.identity.sm.notification.threadpool.size" : {
          "type" : "integer",
          "title" : "Notification Pool Size",
          "propertyOrder" : 1,
          "required" : true,
          "description" : "Specifies the size of the sm notification thread pool (total number of
threads). (property name: com.sun.identity.sm.notification.threadpool.size)"
        }

1.60. DefaultUmaDataStoreProperties

1.60.1. Global Operations

An object of property key-value pairs

Resource path: `/global-config/servers/server-default/properties/uma`

Resource version: `1.0`

1.60.1.1. read

Usage:

```
am> read DefaultUmaDataStoreProperties --global
```

1.60.1.2. update

Usage:

```
am> update DefaultUmaDataStoreProperties --global --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "amconfig.org.forgerock.services.resourcesets.store.common.section" : {

1.61. DeviceIDService

1.61.1. Realm Operations

Resource path: `/realm-config/services/deviceIdService`

Resource version: `1.0`

1.61.1.1. create

Usage:

```
am> create DeviceIDService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "deviceIdSettingsEncryptionKeystorePassword" : {
      "title" : "Key Store Password",
      "description" : "Password to unlock the key store. This password is encrypted when it is saved
 in the OpenAM configuration. You should modify the default value.",
      "propertyOrder" : 500,
```

```
      "required" : false,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "deviceIdSettingsEncryptionKeystore" : {
      "title" : "Encryption Key Store",
      "description" : "Path to the key store from which to load encryption keys.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "deviceIdAttrName" : {
      "title" : "Profile Storage Attribute",
      "description" : "The user's attribute in which to store Device ID profiles.<br><br>The default
attribute is added to the schema when you prepare a user store for use with OpenAM. If you want to
use a different attribute, you must make sure to add it to your user store schema prior to enabling
the Device ID authentication module. OpenAM must be able to write to the attribute.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },

      }
    }
  }
}
```

1.61.1.2. delete

Usage:

```
am> delete DeviceIDService --realm Realm
```

1.61.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DeviceIDService --realm Realm --actionName getAllTypes
```

1.61.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DeviceIDService --realm Realm --actionName getCreatableTypes
```

1.61.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DeviceIDService --realm Realm --actionName nextdescendents
```

1.61.1.6. read

Usage:

```
am> read DeviceIDService --realm Realm
```

1.61.1.7. update

Usage:

```
am> update DeviceIDService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "deviceIdSettingsEncryptionKeystorePassword" : {
      "title" : "Key Store Password",
      "description" : "Password to unlock the key store. This password is encrypted when it is saved
 in the OpenAM configuration. You should modify the default value.",

}
```

1.61.2. Global Operations

Resource path: `/global-config/services/deviceIdService`

Resource version: `1.0`

1.61.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DeviceIDService --global --actionName getAllTypes
```

1.61.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DeviceIDService --global --actionName getCreatableTypes
```

1.61.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DeviceIDService --global --actionName nextdescendents
```

1.61.2.4. read

Usage:

```
am> read DeviceIDService --global
```

1.61.2.5. update

Usage:

```
am> update DeviceIDService --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "deviceIdSettingsEncryptionKeystoreKeyPairAlias" : {

```

1.62. DeviceIdMatchModule

1.62.1. Realm Operations

Resource path: `/realm-config/authentication/modules/deviceidmatch`

Resource version: `1.0`

1.62.1.1. create

Usage:

```
am> create DeviceIdMatchModule --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "clientScriptEnabled" : {
      "title" : "Client-side Script Enabled",
      "description" : "Enable this setting if the client-side script should be executed.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with the authentication module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "clientScript" : {
      "title" : "Client-side Script",
      "description" : "The client-side script.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
```

```
      "exampleValue" : ""
    },
    "serverScript" : {
      "title" : "Server-side Script",
      "description" : "The server-side script to execute.<br><br>This script will be run on
 the server, subsequent to any client script having returned. It can be written in the selected
 language.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.62.1.2. delete

Usage:

```
am> delete DeviceIdMatchModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.62.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DeviceIdMatchModule --realm Realm --actionName getAllTypes
```

1.62.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DeviceIdMatchModule --realm Realm --actionName getCreatableTypes
```

1.62.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DeviceIdMatchModule --realm Realm --actionName nextdescendents
```

1.62.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query DeviceIdMatchModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.62.1.7. read

Usage:

```
am> read DeviceIdMatchModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.62.1.8. update

Usage:

```
am> update DeviceIdMatchModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "clientScriptEnabled" : {
      "title" : "Client-side Script Enabled",
      "description" : "Enable this setting if the client-side script should be executed.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
```

```
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with the authentication module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "clientScript" : {
      "title" : "Client-side Script",
      "description" : "The client-side script.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "serverScript" : {
      "title" : "Server-side Script",
      "description" : "The server-side script to execute.<br><br>This script will be run on
 the server, subsequent to any client script having returned. It can be written in the selected
language.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.62.2. Global Operations

Resource path: `/global-config/authentication/modules/deviceidmatch`

Resource version: `1.0`

1.62.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DeviceIdMatchModule --global --actionName getAllTypes
```

1.62.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DeviceIdMatchModule --global --actionName getCreatableTypes
```

1.62.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DeviceIdMatchModule --global --actionName nextdescendents
```

1.62.2.4. read

Usage:

```
am> read DeviceIdMatchModule --global
```

1.62.2.5. update

Usage:

```
am> update DeviceIdMatchModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "clientScript" : {
          "title" : "Client-side Script",
          "description" : "The client-side script.",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "serverScript" : {
          "title" : "Server-side Script",
          "description" : "The server-side script to execute.<br><br>This script will be run on
 the server, subsequent to any client script having returned. It can be written in the selected
language.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
```

```
        },
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with the authentication
 module.<br><br>Each authentication module has an authentication level that can be used to indicate
 the level of security associated with the module; 0 is the lowest (and the default).",
          "propertyOrder" : 400,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "clientScriptEnabled" : {
          "title" : "Client-side Script Enabled",
          "description" : "Enable this setting if the client-side script should be executed.",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.63. DeviceIdSaveModule

1.63.1. Realm Operations

Resource path: `/realm-config/authentication/modules/deviceidsave`

Resource version: `1.0`

1.63.1.1. create

Usage:

```
am> create DeviceIdSaveModule --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "autoStoreProfiles" : {
      "title" : "Automatically store new profiles",
      "description" : "Select this checkbox to assume user consent to store every new
profile<br><br>If this checkbox is selected user won't be prompted for storing new profiles. After
successful OTP confirmation profile will be stored automatically.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with the authentication module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "maxProfilesAllowed" : {
      "title" : "Maximum stored profile quantity",
      "description" : "No more than specified profiles quantity will be stored in user record",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.63.1.2. delete

Usage:

```
am> delete DeviceIdSaveModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.63.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DeviceIdSaveModule --realm Realm --actionName getAllTypes
```

1.63.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DeviceIdSaveModule --realm Realm --actionName getCreatableTypes
```

1.63.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DeviceIdSaveModule --realm Realm --actionName nextdescendents
```

1.63.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query DeviceIdSaveModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.63.1.7. read

Usage:

```
am> read DeviceIdSaveModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.63.1.8. update

Usage:

```
am> update DeviceIdSaveModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "autoStoreProfiles" : {
      "title" : "Automatically store new profiles",
      "description" : "Select this checkbox to assume user consent to store every new
 profile<br><br>If this checkbox is selected user won't be prompted for storing new profiles. After
 successful OTP confirmation profile will be stored automatically.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with the authentication module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "maxProfilesAllowed" : {
      "title" : "Maximum stored profile quantity",
      "description" : "No more than specified profiles quantity will be stored in user record",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.63.2. Global Operations

Resource path: `/global-config/authentication/modules/deviceidsave`

Resource version: `1.0`

1.63.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action DeviceIdSaveModule --global --actionName getAllTypes
```

1.63.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action DeviceIdSaveModule --global --actionName getCreatableTypes
```

1.63.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action DeviceIdSaveModule --global --actionName nextdescendents
```

1.63.2.4. read

Usage:

```
am> read DeviceIdSaveModule --global
```

1.63.2.5. update

Usage:

```
am> update DeviceIdSaveModule --global --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with the authentication
module.<br><br>Each authentication module has an authentication level that can be used to indicate
the level of security associated with the module; 0 is the lowest (and the default).",
          "propertyOrder" : 300,
```

```
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "maxProfilesAllowed" : {
          "title" : "Maximum stored profile quantity",
          "description" : "No more than specified profiles quantity will be stored in user record",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "autoStoreProfiles" : {
          "title" : "Automatically store new profiles",
          "description" : "Select this checkbox to assume user consent to store every new
profile<br><br>If this checkbox is selected user won't be prompted for storing new profiles. After
successful OTP confirmation profile will be stored automatically.",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.64. DirectoryConfiguration

1.64.1. Global Operations

Connection details for directory server(s).

Resource path: `/global-config/servers/{serverName}/properties/directoryConfiguration`

Resource version: `1.0`

1.64.1.1. read

Usage:

```
am> read DirectoryConfiguration --global --serverName serverName
```

Parameters:

--serverName

Connection details for directory server(s).

1.64.1.2. update

Usage:

```
am> update DirectoryConfiguration --global --serverName serverName --body body
```

Parameters:

--serverName

Connection details for directory server(s).

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "directoryConfiguration" : {
      "type" : "object",
      "title" : "Directory Configuration",
      "propertyOrder" : 0,
      "properties" : {
        "minConnectionPool" : {
          "title" : "Minimum Connection Pool",
          "propertyOrder" : 0,
          "type" : "number"
        },
        "maxConnectionPool" : {
          "title" : "Maximum Connection Pool",
          "propertyOrder" : 1,
          "type" : "number"
        },
        "bindDn" : {
          "title" : "Bind DN",
          "propertyOrder" : 2,
          "type" : "string"
        },
        "bindPassword" : {
          "title" : "Bind Password",
          "propertyOrder" : 3,
          "type" : "string",
          "format" : "password"
        }
      }
    },
    "directoryServers" : {
      "type" : "array",
      "title" : "Server",
      "propertyOrder" : 1,
      "items" : {
        "type" : "object",
        "required" : [ "serverName", "hostName", "portNumber", "connectionType" ],
        "properties" : {
```

```
      "serverName" : {
        "title" : "Name",
        "type" : "string",
        "propertyOrder" : 0
      },
      "hostName" : {
        "title" : "Host Name",
        "type" : "string",

      },
      "portNumber" : {
        "title" : "Port Number",
        "type" : "string",
        "propertyOrder" : 2
      },
      "connectionType" : {
        "type" : "string",
        "enum" : [ "SIMPLE", "SSL" ],
        "options" : {
          "enum_titles" : [ "SIMPLE", "SSL" ]
        },
        "title" : "Connection Type",
        "propertyOrder" : 3
      }
    }
  }
}
}
}
```

1.65. ElasticSearch

1.65.1. Realm Operations

Resource path: `/realm-config/services/audit/Elasticsearch`

Resource version: `1.0`

1.65.1.1. create

Usage:

```
am> create ElasticSearch --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonHandlerPlugin" : {
      "type" : "object",
      "title" : "Audit Event Handler Factory",

          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      }
    }
  }
}
```

1.65.1.2. delete

Usage:

```
am> delete ElasticSearch --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.65.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ElasticSearch --realm Realm --actionName getAllTypes
```

1.65.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ElasticSearch --realm Realm --actionName getCreatableTypes
```

1.65.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ElasticSearch --realm Realm --actionName nextdescendents
```

1.65.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ElasticSearch --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.65.1.7. read

Usage:

```
am> read ElasticSearch --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.65.1.8. update

Usage:

```
am> update ElasticSearch --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonHandlerPlugin" : {
      "type" : "object",
      "title" : "Audit Event Handler Factory",
      "propertyOrder" : 1,
      "properties" : {
        "handlerFactory" : {
          "title" : "Factory Class Name",
          "description" : "The fully qualified class name of the factory
 responsible for creating the Audit Event Handler. The class must implement
<code>org.forgerock.openam.audit.AuditEventHandlerFactory</code>.",

    }
   }
  }
}
```

1.65.2. Global Operations

Resource path: `/global-config/services/audit/Elasticsearch`

Resource version: `1.0`

1.65.2.1. create

Usage:

```
am> create ElasticSearch --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "elasticsearchConfig" : {
      "type" : "object",
      "title" : "Elasticsearch Configuration",
      "propertyOrder" : 2,
      "properties" : {
        "port" : {
          "title" : "Server Port",

      }
    }
  }
}
```

1.65.2.2. delete

Usage:

```
am> delete ElasticSearch --global --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.65.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ElasticSearch --global --actionName getAllTypes
```

1.65.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ElasticSearch --global --actionName getCreatableTypes
```

1.65.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ElasticSearch --global --actionName nextdescendents
```

1.65.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ElasticSearch --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.65.2.7. read

Usage:

```
am> read ElasticSearch --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.65.2.8. update

Usage:

```
am> update ElasticSearch --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "elasticsearchConfig" : {
      "type" : "object",
      "title" : "Elasticsearch Configuration",
      "propertyOrder" : 2,
      "properties" : {
        "port" : {
          "title" : "Server Port",
          "description" : "Specifies the port number used to access Elasticsearch's REST API.",
          "propertyOrder" : 5200,
```

376

1.66. EmailService

1.66.1. Realm Operations

Resource path: `/realm-config/services/email`

Resource version: `1.0`

1.66.1.1. create

Usage:

```
am> create EmailService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
```

```
  "properties" : {
    "hostname" : {
      "title" : "Mail Server Host Name",
      "description" : "Specifies the fully qualified domain name of the SMTP mail server through which
to send email notifications.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : "smtp.example.com"
    },
    "emailAddressAttribute" : {
      "title" : "Email Attribute Name",
      "description" : "Specifies the profile attribute from which to retrieve the end user's email
address.",
      "propertyOrder" : 800,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "password" : {
      "title" : "Mail Server Authentication Password",
      "description" : "Specifies the password for the SMTP user name.",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "from" : {
      "title" : "Email From Address",
      "description" : "Specifies the address from which to send email notifications.",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "string",
      "exampleValue" : "no-reply@example.com"
    },
    "port" : {
      "title" : "Mail Server Host Port",
      "description" : "Specifies the port number for the SMTP mail server.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "subject" : {
      "title" : "Email Subject",
      "description" : "Specifies a subject for notification messages. If you do not set this, OpenAM
does not set the subject for notification messages.",
      "propertyOrder" : 900,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "message" : {
      "title" : "Email Content",
      "description" : "Specifies content for notification messages. If you do not set this, OpenAM
includes only the confirmation URL in the mail body.",
      "propertyOrder" : 1000,
      "required" : false,
```

```
      "type" : "string",
      "exampleValue" : ""
    },
    "emailRateLimitSeconds" : {
      "title" : "Email Rate Limit",
      "description" : "Specifies the minimum number of seconds which must elapse between sending
  emails to an individual user.",
      "propertyOrder" : 1100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "username" : {
      "title" : "Mail Server Authentication Username",

      "title" : "Mail Server Secure Connection",
      "description" : "Specifies whether to connect to the SMTP mail server using SSL.",
      "propertyOrder" : 600,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "emailImplClassName" : {
      "title" : "Email Message Implementation Class",
      "description" : "Specifies the class that sends email notifications, such as those sent for user
  registration and forgotten passwords.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.66.1.2. delete

Usage:

```
am> delete EmailService --realm Realm
```

1.66.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action EmailService --realm Realm --actionName getAllTypes
```

1.66.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action EmailService --realm Realm --actionName getCreatableTypes
```

1.66.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action EmailService --realm Realm --actionName nextdescendents
```

1.66.1.6. read

Usage:

```
am> read EmailService --realm Realm
```

1.66.1.7. update

Usage:

```
am> update EmailService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "hostname" : {
      "title" : "Mail Server Host Name",
      "description" : "Specifies the fully qualified domain name of the SMTP mail server through which
 to send email notifications.",
      "propertyOrder" : 200,

      "exampleValue" : ""
    }
  }
}
```

1.66.2. Global Operations

Resource path: `/global-config/services/email`

Resource version: `1.0`

1.66.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action EmailService --global --actionName getAllTypes
```

1.66.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action EmailService --global --actionName getCreatableTypes
```

1.66.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action EmailService --global --actionName nextdescendents
```

1.66.2.4. read

Usage:

```
am> read EmailService --global
```

1.66.2.5. update

Usage:

```
am> update EmailService --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "port" : {
          "title" : "Mail Server Host Port",
          "description" : "Specifies the port number for the SMTP mail server.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "emailAddressAttribute" : {
          "title" : "Email Attribute Name",
          "description" : "Specifies the profile attribute from which to retrieve the end user's email
address.",
          "propertyOrder" : 800,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "hostname" : {
          "title" : "Mail Server Host Name",
          "description" : "Specifies the fully qualified domain name of the SMTP mail server through
which to send email notifications.",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "string",
          "exampleValue" : "smtp.example.com"
        },
        "sslState" : {
          "title" : "Mail Server Secure Connection",
          "description" : "Specifies whether to connect to the SMTP mail server using SSL.",
          "propertyOrder" : 600,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
```

```
      },
      "subject" : {
        "title" : "Email Subject",
        "description" : "Specifies a subject for notification messages. If you do not set this,
OpenAM does not set the subject for notification messages.",
        "propertyOrder" : 900,
        "required" : false,
        "type" : "string",
        "exampleValue" : ""
      },
      "username" : {
        "title" : "Mail Server Authentication Username",
        "description" : "Specifies the user name for the SMTP mail server.",
        "propertyOrder" : 400,
        "required" : true,
        "type" : "string",
        "exampleValue" : "username"
      },
      "message" : {
        "title" : "Email Content",
        "description" : "Specifies content for notification messages. If you do not set this, OpenAM
includes only the confirmation URL in the mail body.",

      },
      "password" : {
        "title" : "Mail Server Authentication Password",
        "description" : "Specifies the password for the SMTP user name.",
        "propertyOrder" : 500,
        "required" : true,
        "type" : "string",
        "format" : "password",
        "exampleValue" : ""
      },
      "emailRateLimitSeconds" : {
        "title" : "Email Rate Limit",
        "description" : "Specifies the minimum number of seconds which must elapse between sending
emails to an individual user.",
        "propertyOrder" : 1100,
        "required" : true,
        "type" : "integer",
        "exampleValue" : ""
      },
      "from" : {
        "title" : "Email From Address",
        "description" : "Specifies the address from which to send email notifications.",
        "propertyOrder" : 700,
        "required" : true,
```

```
            "type" : "string",
            "exampleValue" : "no-reply@example.com"
          }
        },
        "type" : "object",
        "title" : "Realm Defaults"
      }
    }
}
```

1.67. EnvironmentAndSystemPropertySecretsStore

1.67.1. Global Operations

Resource path: `/global-config/secrets/stores/EnvironmentAndSystemPropertySecretStore`

Resource version: `1.0`

1.67.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action EnvironmentAndSystemPropertySecretsStore --global --actionName getAllTypes
```

1.67.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action EnvironmentAndSystemPropertySecretsStore --global --actionName getCreatableTypes
```

1.67.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action EnvironmentAndSystemPropertySecretsStore --global --actionName nextdescendents
```

1.67.1.4. read

Usage:

```
am> read EnvironmentAndSystemPropertySecretsStore --global
```

1.67.1.5. update

Usage:

```
am> update EnvironmentAndSystemPropertySecretsStore --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "format" : {
      "title" : "Value format",
      "description" : "Indicates the format used to store the secrets. The available options are: <ul>
<li>Plain text: the secrets are stored as UTF-8 encoded text.</li> <li>Base64 encoded: the secrets
are stored as Base64 encoded binary values.</li> <li>Encrypted text: the plain text secrets are
encrypted using AM's encryption key.</li> <li>Encrypted Base64 encoded: the Base64 encoded binary
values are encrypted using AM's encryption key.</li>  <li>Encrypted HMAC key: the Base64 encoded
binary representation of the HMAC key is encrypted using AM's encryption key. Use this format when
working with non generic secrets.</li> </ul>",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.68. FailureURL

1.68.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/SetFailureUrlNode`

Resource version: `1.0`

1.68.1.1. create

Usage:

```
am> create FailureURL --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "failureUrl" : {
      "title" : "Failure URL",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "failureUrl" ]
}
```

1.68.1.2. delete

Usage:

```
am> delete FailureURL --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.68.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action FailureURL --realm Realm --actionName getAllTypes
```

1.68.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action FailureURL --realm Realm --actionName getCreatableTypes
```

1.68.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action FailureURL --realm Realm --body body --actionName listOutcomes
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.68.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action FailureURL --realm Realm --actionName nextdescendents
```

1.68.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query FailureURL --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.68.1.8. read

Usage:

```
am> read FailureURL --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.68.1.9. update

Usage:

```
am> update FailureURL --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "failureUrl" : {
      "title" : "Failure URL",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "failureUrl" ]
}
```

1.69. FederationModule

1.69.1. Realm Operations

Resource path: /realm-config/authentication/modules/federation

Resource version: 1.0

1.69.1.1. create

Usage:

```
am> create FederationModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.69.1.2. delete

Usage:

```
am> delete FederationModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.69.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action FederationModule --realm Realm --actionName getAllTypes
```

1.69.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action FederationModule --realm Realm --actionName getCreatableTypes
```

1.69.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action FederationModule --realm Realm --actionName nextdescendents
```

1.69.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query FederationModule --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.69.1.7. read

Usage:

```
am> read FederationModule --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.69.1.8. update

Usage:

```
am> update FederationModule --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.69.2. Global Operations

Resource path: `/global-config/authentication/modules/federation`

Resource version: `1.0`

1.69.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action FederationModule --global --actionName getAllTypes
```

1.69.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action FederationModule --global --actionName getCreatableTypes
```

1.69.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action FederationModule --global --actionName nextdescendents
```

1.69.2.4. read

Usage:

```
am> read FederationModule --global
```

1.69.2.5. update

Usage:

```
am> update FederationModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.70. FileSystemSecretStore

1.70.1. Realm Operations

Resource path: /realm-config/secrets/stores/FileSystemSecretStore

Resource version: 1.0

1.70.1.1. create

Usage:

```
am> create FileSystemSecretStore --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "suffix" : {
      "title" : "File suffix",
      "description" : "A suffix to add to the name of each secret to obtain the file name, such as
\".txt\" (defaults to no suffix).",
      "propertyOrder" : 200,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "format" : {
      "title" : "File format",
      "description" : "Indicates what format is used to store the secrets in the files. The available
options are: <ul> <li>Plain text: the secrets are stored as UTF-8 encoded text.</li> <li>Base64
encoded: the secrets are stored as Base64 encoded binary values.</li> <li>Encrypted text: the plain
text secrets are encrypted using AM's encryption key.</li> <li>Encrypted Base64 encoded: the Base64
encoded binary values are encrypted using AM's encryption key.</li>  <li>Encrypted HMAC key: the
Base64 encoded binary representation of the HMAC key is encrypted  using AM's encryption key. Use this
format when working with non generic secrets.</li> </ul>",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "directory" : {
      "title" : "Directory",
      "description" : "The directory containing secret files.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.70.1.2. delete

Usage:

```
am> delete FileSystemSecretStore --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.70.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action FileSystemSecretStore --realm Realm --actionName getAllTypes
```

1.70.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action FileSystemSecretStore --realm Realm --actionName getCreatableTypes
```

1.70.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action FileSystemSecretStore --realm Realm --actionName nextdescendents
```

1.70.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query FileSystemSecretStore --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.70.1.7. read

Usage:

```
am> read FileSystemSecretStore --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.70.1.8. update

Usage:

```
am> update FileSystemSecretStore --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "suffix" : {
      "title" : "File suffix",
      "description" : "A suffix to add to the name of each secret to obtain the file name, such as
\".txt\" (defaults to no suffix).",
      "propertyOrder" : 200,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "format" : {
      "title" : "File format",
      "description" : "Indicates what format is used to store the secrets in the files. The available
options are: <ul> <li>Plain text: the secrets are stored as UTF-8 encoded text.</li> <li>Base64
encoded: the secrets are stored as Base64 encoded binary values.</li> <li>Encrypted text: the plain
text secrets are encrypted using AM's encryption key.</li> <li>Encrypted Base64 encoded: the Base64
encoded binary values are encrypted using AM's encryption key.</li>  <li>Encrypted HMAC key: the
Base64 encoded binary representation of the HMAC key is encrypted using AM's encryption key. Use this
format when working with non generic secrets.</li> </ul>",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "directory" : {
      "title" : "Directory",
      "description" : "The directory containing secret files.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.70.2. Global Operations

Resource path: `/global-config/secrets/stores/FileSystemSecretStore`

Resource version: `1.0`

1.70.2.1. create

Usage:

```
am> create FileSystemSecretStore --global --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "format" : {
      "title" : "File format",
      "description" : "Indicates what format is used to store the secrets in the files. The available
options are: <ul> <li>Plain text: the secrets are stored as UTF-8 encoded text.</li> <li>Base64
encoded: the secrets are stored as Base64 encoded binary values.</li> <li>Encrypted text: the plain
text secrets are encrypted using AM's encryption key.</li> <li>Encrypted Base64 encoded: the Base64
encoded binary values are encrypted using AM's encryption key.</li>  <li>Encrypted HMAC key: the
Base64 encoded binary representation of the HMAC key is encrypted using AM's encryption key. Use this
format when working with non generic secrets.</li> </ul>",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "directory" : {
      "title" : "Directory",
      "description" : "The directory containing secret files.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "suffix" : {
      "title" : "File suffix",
      "description" : "A suffix to add to the name of each secret to obtain the file name, such as
\".txt\" (defaults to no suffix).",
      "propertyOrder" : 200,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.70.2.2. delete

Usage:

```
am> delete FileSystemSecretStore --global --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.70.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action FileSystemSecretStore --global --actionName getAllTypes
```

1.70.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action FileSystemSecretStore --global --actionName getCreatableTypes
```

1.70.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action FileSystemSecretStore --global --actionName nextdescendents
```

1.70.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query FileSystemSecretStore --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.70.2.7. read

Usage:

```
am> read FileSystemSecretStore --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.70.2.8. update

Usage:

```
am> update FileSystemSecretStore --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "format" : {
      "title" : "File format",
      "description" : "Indicates what format is used to store the secrets in the files. The available
options are: <ul> <li>Plain text: the secrets are stored as UTF-8 encoded text.</li> <li>Base64
encoded: the secrets are stored as Base64 encoded binary values.</li> <li>Encrypted text: the plain
text secrets are encrypted using AM's encryption key.</li> <li>Encrypted Base64 encoded: the Base64
encoded binary values are encrypted using AM's encryption key.</li>  <li>Encrypted HMAC key: the
Base64 encoded binary representation of the HMAC key is encrypted using AM's encryption key. Use this
format when working with non generic secrets.</li> </ul>",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "directory" : {
      "title" : "Directory",
      "description" : "The directory containing secret files.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "suffix" : {
      "title" : "File suffix",
      "description" : "A suffix to add to the name of each secret to obtain the file name, such as
\".txt\" (defaults to no suffix).",
      "propertyOrder" : 200,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.71. ForgottenPassword

1.71.1. Realm Operations

Self Service endpoint for retrieving a forgotten password

Resource path: `/selfservice/forgottenPassword`

Resource version: `1.0`

1.71.1.1. read

Initialise the forgotten password reclamation process.A set of requirements will be returned that will need to be fulfilled and sent to the submitRequirements action.

Usage:

```
am> read ForgottenPassword --realm Realm
```

1.71.1.2. submitRequirements

Submit some fulfilled requirements. Returns either a completion status, or a token along with some more requirements. If requirements are returned, they should be submitted with the token as a fresh request to this action.

Usage:

```
am> action ForgottenPassword --realm Realm --body body --actionName submitRequirements
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "The structure of a request to the submitRequirements action.",
  "type" : "object",
  "title" : "Submit requirements structure",
  "properties" : {
    "token" : {
      "type" : "string",
      "title" : "Token",
      "description" : "The token returned from the previous submitRequirements request."
    },
    "input" : {
      "type" : "object",
      "title" : "Input",
      "description" : "The input as collected from the user that has forgotten their password. This
 object must conform to the JSON Schema of the requirements property from the last response.",
      "patternProperties" : {
        ".*" : {
          "type" : "any",
          "title" : "Input Property",
          "description" : "Valid content according to the received JSON Schema."
        }
      }
    }
  },
  "required" : [ "input" ]
}
```

1.72. ForgottenUsername

1.72.1. Realm Operations

Self Service endpoint for retrieving a forgotten username

Resource path: `/selfservice/forgottenUsername`

Resource version: `1.0`

1.72.1.1. read

Initialise the forgotten username reclamation process.A set of requirements will be returned that will need to be fulfilled and sent to the submitRequirements action.

Usage:

```
am> read ForgottenUsername --realm Realm
```

1.72.1.2. submitRequirements

Submit some fulfilled requirements. Returns either a completion status, or a token along with some more requirements. If requirements are returned, they should be submitted with the token as a fresh request to this action.

Usage:

```
am> action ForgottenUsername --realm Realm --body body --actionName submitRequirements
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "The structure of a request to the submitRequirements action.",
  "type" : "object",
  "title" : "Submit requirements structure",
  "properties" : {
    "token" : {
      "type" : "string",
      "title" : "Token",
      "description" : "The token returned from the previous submitRequirements request."
    },
    "input" : {
      "type" : "object",
      "title" : "Input",
      "description" : "The input as collected from the user that has forgotten their username. This
 object must conform to the JSON Schema of the requirements property from the last response.",
      "patternProperties" : {
        ".*" : {
          "type" : "any",
          "title" : "Input Property",
          "description" : "Valid content according to the received JSON Schema."
        }
      }
    }
  },
  "required" : [ "input" ]
}
```

1.73. GeneralProperties

1.73.1. Global Operations

An object of property key-value pairs

Resource path: `/global-config/servers/{serverName}/properties/general`

Resource version: `1.0`

1.73.1.1. read

Usage:

```
am> read GeneralProperties --global --serverName serverName
```

Parameters:

--serverName

An object of property key-value pairs

1.73.1.2. update

Usage:

```
am> update GeneralProperties --global --serverName serverName --body body
```

Parameters:

--serverName

An object of property key-value pairs

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "amconfig.header.site" : {
      "title" : "Site",
      "type" : "object",

1.74. GenericLDAPv3

1.74.1. Realm Operations

Resource path: `/realm-config/services/id-repositories/LDAPv3`

Resource version: `1.0`

1.74.1.1. create

Usage:

```
am> create GenericLDAPv3 --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "groupconfig" : {
      "type" : "object",
      "title" : "Group Configuration",
      "propertyOrder" : 5,

```

1.74.1.2. delete

Usage:

```
am> delete GenericLDAPv3 --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.74.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action GenericLDAPv3 --realm Realm --actionName getAllTypes
```

1.74.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action GenericLDAPv3 --realm Realm --actionName getCreatableTypes
```

1.74.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action GenericLDAPv3 --realm Realm --actionName nextdescendents
```

1.74.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query GenericLDAPv3 --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.74.1.7. read

Usage:

```
am> read GenericLDAPv3 --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.74.1.8. update

Usage:

```
am> update GenericLDAPv3 --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```

1.75. GetSessionData

1.75.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/SessionDataNode`

Resource version: `1.0`

1.75.1.1. create

Usage:

```
am> create GetSessionData --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "sharedStateKey" : {
      "title" : "Shared State Key",
      "description" : "",
      "propertyOrder" : 200,
      "type" : "string",
      "exampleValue" : ""
    },
    "sessionDataKey" : {
      "title" : "Session Data Key",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "sessionDataKey", "sharedStateKey" ]
}
```

1.75.1.2. delete

Usage:

```
am> delete GetSessionData --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.75.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action GetSessionData --realm Realm --actionName getAllTypes
```

1.75.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action GetSessionData --realm Realm --actionName getCreatableTypes
```

1.75.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action GetSessionData --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "title" : "Some configuration of the node. This does not need to be complete against the
>  configuration schema."
> }
> ```

1.75.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action GetSessionData --realm Realm --actionName nextdescendents
```

1.75.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query GetSessionData --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.75.1.8. read

Usage:

```
am> read GetSessionData --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.75.1.9. update

Usage:

```
am> update GetSessionData --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "sharedStateKey" : {
      "title" : "Shared State Key",

      "type" : "string",
      "exampleValue" : ""
    },
    "sessionDataKey" : {
      "title" : "Session Data Key",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "sessionDataKey", "sharedStateKey" ]
}
```

1.76. GlobalScripts

1.76.1. Global Operations

Resource path: `/global-config/services/scripting/globalScript`

Resource version: `1.0`

1.76.1.1. create

Usage:

```
am> create GlobalScripts --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "description" : {
      "title" : "Script description",
      "description" : "An optional text string to help identify the script",
```

```
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "context" : {
      "title" : "Script type",
      "description" : "The script type. Supported values are: POLICY_CONDITION : Policy Condition
AUTHENTICATION_SERVER_SIDE : Server-side Authentication  AUTHENTICATION_CLIENT_SIDE : Client-side
Authentication - Note Client-side scripts must be written in JavaScript OIDC_CLAIMS : OIDC Claims",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "script" : {
      "title" : "Script",
      "description" : "The source code of the script. The source code is in UTF-8 format and encoded
into Base64",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "name" : {
      "title" : "Script name",
      "description" : "The name provided for the script",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "lastModifiedDate" : {
      "title" : "Last modification date",
      "description" : "A string containing the last modified date and time, in ISO 8601 format. If
the script has not been modified since it was created, this property will have the same value as
creationDate",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "lastModifiedBy" : {
      "title" : "Last modifier",
      "description" : "A string containing the universal identifier DN of the subject that most
recently updated the script. If the script has not been modified since it was created, this property
will have the same value as createdBy",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "language" : {
      "title" : "Script language",
      "description" : "The language the script is written in - JAVASCRIPT or GROOVY",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
```

```
    },
    "creationDate" : {
      "title" : "Creation date",
      "description" : "An integer containing the creation date and time, in ISO 8601 format",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "createdBy" : {
      "title" : "Created by",
      "description" : "A string containing the universal identifier DN of the subject that created the
 script",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.76.1.2. delete

Usage:

```
am> delete GlobalScripts --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.76.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action GlobalScripts --global --actionName getAllTypes
```

1.76.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action GlobalScripts --global --actionName getCreatableTypes
```

1.76.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action GlobalScripts --global --actionName nextdescendents
```

1.76.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query GlobalScripts --global --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.76.1.7. read

Usage:

```
am> read GlobalScripts --global --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.76.1.8. update

Usage:

```
am> update GlobalScripts --global --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "description" : {
      "title" : "Script description",
      "description" : "An optional text string to help identify the script",
      "propertyOrder" : null,
```

```
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "context" : {
        "title" : "Script type",
        "description" : "The script type. Supported values are: POLICY_CONDITION : Policy Condition
AUTHENTICATION_SERVER_SIDE : Server-side Authentication  AUTHENTICATION_CLIENT_SIDE : Client-side
Authentication - Note Client-side scripts must be written in JavaScript OIDC_CLAIMS : OIDC Claims",
        "propertyOrder" : null,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "script" : {
        "title" : "Script",
        "description" : "The source code of the script. The source code is in UTF-8 format and encoded
into Base64",
        "propertyOrder" : null,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "name" : {
        "title" : "Script name",
        "description" : "The name provided for the script",
        "propertyOrder" : null,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "lastModifiedDate" : {
        "title" : "Last modification date",
        "description" : "A string containing the last modified date and time, in ISO 8601 format. If
the script has not been modified since it was created, this property will have the same value as
creationDate",
        "propertyOrder" : null,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "lastModifiedBy" : {
        "title" : "Last modifier",
        "description" : "A string containing the universal identifier DN of the subject that most
recently updated the script. If the script has not been modified since it was created, this property
will have the same value as createdBy",
        "propertyOrder" : null,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "language" : {
        "title" : "Script language",
        "description" : "The language the script is written in - JAVASCRIPT or GROOVY",
        "propertyOrder" : null,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
```

```
      "creationDate" : {
        "title" : "Creation date",
        "description" : "An integer containing the creation date and time, in ISO 8601 format",
        "propertyOrder" : null,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      },
      "createdBy" : {
        "title" : "Created by",
        "description" : "A string containing the universal identifier DN of the subject that created the
 script",
        "propertyOrder" : null,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      }
    }
}
```

1.77. GlobalSecretsSettings

1.77.1. Global Operations

Resource path: `/global-config/secrets/GlobalSecrets`

Resource version: `1.0`

1.77.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action GlobalSecretsSettings --global --actionName getAllTypes
```

1.77.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action GlobalSecretsSettings --global --actionName getCreatableTypes
```

1.77.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action GlobalSecretsSettings --global --actionName nextdescendents
```

1.77.1.4. read

Usage:

```
am> read GlobalSecretsSettings --global
```

1.77.1.5. update

Usage:

```
am> update GlobalSecretsSettings --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "storeTypes" : {
      "title" : "Store types",
      "description" : "This setting contains the currently installed secrets store types.",
      "propertyOrder" : 100,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.78. Globalization

1.78.1. Realm Operations

Resource path: /realm-config/services/globalization

Resource version: 1.0

1.78.1.1. create

Usage:

```
am> create Globalization --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonNameFormats" : {
      "title" : "Auto Generated Common Name Format",
      "description" : "Use this list to configure how OpenAM formats names shown in the console
 banner.<br><br>This setting allows the name of the authenticated user shown in the OpenAM console
 banner to be customised based on the locale of the user.",
      "propertyOrder" : 300,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.78.1.2. delete

Usage:

```
am> delete Globalization --realm Realm
```

1.78.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Globalization --realm Realm --actionName getAllTypes
```

1.78.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Globalization --realm Realm --actionName getCreatableTypes
```

1.78.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Globalization --realm Realm --actionName nextdescendents
```

1.78.1.6. read

Usage:

```
am> read Globalization --realm Realm
```

1.78.1.7. update

Usage:

```
am> update Globalization --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonNameFormats" : {
      "title" : "Auto Generated Common Name Format",
      "description" : "Use this list to configure how OpenAM formats names shown in the console
 banner.<br><br>This setting allows the name of the authenticated user shown in the OpenAM console
 banner to be customised based on the locale of the user.",
      "propertyOrder" : 300,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.78.2. Global Operations

Resource path: /global-config/services/globalization

Resource version: 1.0

1.78.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Globalization --global --actionName getAllTypes
```

1.78.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Globalization --global --actionName getCreatableTypes
```

1.78.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Globalization --global --actionName nextdescendents
```

1.78.2.4. read

Usage:

```
am> read Globalization --global
```

1.78.2.5. update

Usage:

```
am> update Globalization --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "sun-identity-g11n-settings-charset-alias-mapping" : {
      "title" : "Charset Aliases",
      "description" : "Use this list to map between different character set names used in Java and in
  MIME.",
      "propertyOrder" : 200,
```

```
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "charsetMappings" : {
      "title" : "Charsets Supported by Each Locale",
      "description" : "This table lets you configure the order of supported character sets used for
each supported locale. Change the settings only if the defaults are not appropriate.",
      "propertyOrder" : 100,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "defaults" : {
      "properties" : {
        "commonNameFormats" : {
          "title" : "Auto Generated Common Name Format",
          "description" : "Use this list to configure how OpenAM formats names shown in the console
banner.<br><br>This setting allows the name of the authenticated user shown in the OpenAM console
banner to be customised based on the locale of the user.",
          "propertyOrder" : 300,
          "required" : true,
          "items" : {
            "type" : "string"
          },
          "type" : "array",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.79. GraphiteReporter

1.79.1. Global Operations

Resource path: `/global-config/services/monitoring/graphite`

Resource version: `1.0`

1.79.1.1. create

Usage:

```
am> create GraphiteReporter --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "host" : {
      "title" : "Hostname",
      "description" : "The hostname of the Graphite server to which metrics should be published.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "port" : {
      "title" : "Port",
      "description" : "The port of the Graphite server to which metrics should be published.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "frequency" : {
      "title" : "Frequency",
      "description" : "The frequency (in seconds) at which metrics should be published.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.79.1.2. delete

Usage:

```
am> delete GraphiteReporter --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.79.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action GraphiteReporter --global --actionName getAllTypes
```

1.79.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action GraphiteReporter --global --actionName getCreatableTypes
```

1.79.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action GraphiteReporter --global --actionName nextdescendents
```

1.79.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query GraphiteReporter --global --filter filter
```

Parameters:

--filter

    A CREST formatted query filter, where "true" will query all.

1.79.1.7. read

Usage:

```
am> read GraphiteReporter --global --id id
```

Parameters:

--id

    The unique identifier for the resource.

1.79.1.8. update

Usage:

```
am> update GraphiteReporter --global --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "host" : {
      "title" : "Hostname",
      "description" : "The hostname of the Graphite server to which metrics should be published.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "port" : {
      "title" : "Port",
      "description" : "The port of the Graphite server to which metrics should be published.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "frequency" : {
      "title" : "Frequency",
      "description" : "The frequency (in seconds) at which metrics should be published.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.80. HOTPGenerator

1.80.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/OneTimePasswordGeneratorNode`

Resource version: 1.0

1.80.1.1. create

Usage:

```
am> create HOTPGenerator --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "length" : {
      "title" : "One Time Password Length",
      "description" : "The length in characters of the one time password.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "length" ]
}
```

1.80.1.2. delete

Usage:

```
am> delete HOTPGenerator --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.80.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action HOTPGenerator --realm Realm --actionName getAllTypes
```

1.80.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action HOTPGenerator --realm Realm --actionName getCreatableTypes
```

1.80.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action HOTPGenerator --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.80.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action HOTPGenerator --realm Realm --actionName nextdescendents
```

1.80.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query HOTPGenerator --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.80.1.8. read

Usage:

```
am> read HOTPGenerator --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.80.1.9. update

Usage:

```
am> update HOTPGenerator --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "length" : {
      "title" : "One Time Password Length",
      "description" : "The length in characters of the one time password.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "length" ]
}
```

1.81. HotpModule

1.81.1. Realm Operations

Resource path: `/realm-config/authentication/modules/hotp`

Resource version: `1.0`

1.81.1.1. create

Usage:

```
am> create HotpModule --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "smtpSslEnabled" : {
      "title" : "Mail Server Secure Connection ",
      "description" : "This setting controls whether the authentication module communicates with the
mail server using SSL/TLS",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "userProfileEmailAttribute" : {
      "title" : "Email Attribute Name",
      "description" : "This is the attribute name used by the OTP to email the user",
      "propertyOrder" : 1400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",

}
```

1.81.1.2. delete

Usage:

```
am> delete HotpModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.81.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action HotpModule --realm Realm --actionName getAllTypes
```

1.81.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action HotpModule --realm Realm --actionName getCreatableTypes
```

1.81.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action HotpModule --realm Realm --actionName nextdescendents
```

1.81.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query HotpModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.81.1.7. read

Usage:

```
am> read HotpModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.81.1.8. update

Usage:

```
am> update HotpModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "smtpSslEnabled" : {
      "title" : "Mail Server Secure Connection ",

}
```

1.81.2. Global Operations

Resource path: `/global-config/authentication/modules/hotp`

Resource version: `1.0`

1.81.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action HotpModule --global --actionName getAllTypes
```

1.81.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action HotpModule --global --actionName getCreatableTypes
```

1.81.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action HotpModule --global --actionName nextdescendents
```

1.81.2.4. read

Usage:

```
am> read HotpModule --global
```

1.81.2.5. update

Usage:

```
am> update HotpModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "autoSendOTP" : {
          "title" : "Auto Send OTP Code",

```

1.82. HsmMappings

1.82.1. Realm Operations

Resource path: `/realm-config/secrets/stores/HsmSecretStore/{HsmSecretStore}/mappings`

Resource version: `1.0`

1.82.1.1. create

Usage:

```
am> create HsmMappings --realm Realm --HsmSecretStore HsmSecretStore --id id --body body
```

Parameters:

--HsmSecretStore

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "secretId" : {
      "title" : "Secret ID",
      "description" : "The secret ID that is to be associated with an alias.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "aliases" : {
      "title" : "Aliases",
      "description" : "The list of keystore aliases that can resolve the secret. The first element of
the alias list determines which alias is the \"active\" one. Active secrets are used for signature
generation and encryption, while the non-active secrets are mainly used for signature verification
and decryption.",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string",
        "minLength" : 1
      },
      "minItems" : 1,
      "uniqueItems" : true,
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.82.1.2. delete

Usage:

```
am> delete HsmMappings --realm Realm --HsmSecretStore HsmSecretStore --id id
```

Parameters:

--HsmSecretStore

--id

The unique identifier for the resource.

1.82.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action HsmMappings --realm Realm --HsmSecretStore HsmSecretStore --actionName getAllTypes
```

Parameters:

--HsmSecretStore

1.82.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action HsmMappings --realm Realm --HsmSecretStore HsmSecretStore --actionName getCreatableTypes
```

Parameters:

--HsmSecretStore

1.82.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action HsmMappings --realm Realm --HsmSecretStore HsmSecretStore --actionName nextdescendents
```

Parameters:

--HsmSecretStore

1.82.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query HsmMappings --realm Realm --filter filter --HsmSecretStore HsmSecretStore
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

```
--HsmSecretStore
```

1.82.1.7. read

Usage:

```
am> read HsmMappings --realm Realm --HsmSecretStore HsmSecretStore --id id
```

Parameters:

```
--HsmSecretStore
```

```
--id
```

> The unique identifier for the resource.

1.82.1.8. update

Usage:

```
am> update HsmMappings --realm Realm --HsmSecretStore HsmSecretStore --id id --body body
```

Parameters:

```
--HsmSecretStore
```

```
--id
```

> The unique identifier for the resource.

```
--body
```

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "secretId" : {
      "title" : "Secret ID",
      "description" : "The secret ID that is to be associated with an alias.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "aliases" : {
      "title" : "Aliases",
      "description" : "The list of keystore aliases that can resolve the secret. The first element of
the alias list determines which alias is the \"active\" one. Active secrets are used for signature
generation and encryption, while the non-active secrets are mainly used for signature verification
and decryption.",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string",
        "minLength" : 1
      },
      "minItems" : 1,
      "uniqueItems" : true,
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.82.2. Global Operations

Resource path: `/global-config/secrets/stores/HsmSecretStore/{HsmSecretStore}/mappings`

Resource version: `1.0`

1.82.2.1. create

Usage:

```
am> create HsmMappings --global --HsmSecretStore HsmSecretStore --id id --body body
```

Parameters:

--HsmSecretStore

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "secretId" : {
      "title" : "Secret ID",
      "description" : "The secret ID that is to be associated with an alias.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "aliases" : {
      "title" : "Aliases",
      "description" : "The list of keystore aliases that can resolve the secret. The first element of
the alias list determines which alias is the \"active\" one. Active secrets are used for signature
generation and encryption, while the non-active secrets are mainly used for signature verification
and decryption.",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string",
        "minLength" : 1
      },
      "minItems" : 1,
      "uniqueItems" : true,
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.82.2.2. delete

Usage:

```
am> delete HsmMappings --global --HsmSecretStore HsmSecretStore --id id
```

Parameters:

--HsmSecretStore

--id

The unique identifier for the resource.

1.82.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action HsmMappings --global --HsmSecretStore HsmSecretStore --actionName getAllTypes
```

Parameters:

`--HsmSecretStore`

1.82.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action HsmMappings --global --HsmSecretStore HsmSecretStore --actionName getCreatableTypes
```

Parameters:

`--HsmSecretStore`

1.82.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action HsmMappings --global --HsmSecretStore HsmSecretStore --actionName nextdescendents
```

Parameters:

`--HsmSecretStore`

1.82.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query HsmMappings --global --filter filter --HsmSecretStore HsmSecretStore
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

--HsmSecretStore

1.82.2.7. read

Usage:

```
am> read HsmMappings --global --HsmSecretStore HsmSecretStore --id id
```

Parameters:

--HsmSecretStore

--id

> The unique identifier for the resource.

1.82.2.8. update

Usage:

```
am> update HsmMappings --global --HsmSecretStore HsmSecretStore --id id --body body
```

Parameters:

--HsmSecretStore

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "secretId" : {
      "title" : "Secret ID",
      "description" : "The secret ID that is to be associated with an alias.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "aliases" : {
      "title" : "Aliases",
      "description" : "The list of keystore aliases that can resolve the secret. The first element of
the alias list determines which alias is the \"active\" one. Active secrets are used for signature
generation and encryption, while the non-active secrets are mainly used for signature verification
and decryption.",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string",
        "minLength" : 1
      },
      "minItems" : 1,
      "uniqueItems" : true,
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.83. HsmSecretStore

1.83.1. Realm Operations

Resource path: `/realm-config/secrets/stores/HsmSecretStore`

Resource version: `1.0`

1.83.1.1. create

Usage:

```
am> create HsmSecretStore --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "file" : {
      "title" : "Configuration File",
      "description" : "The file containing initialisation configuration for the HSM.",
      "propertyOrder" : 100,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "storePassword" : {
      "title" : "HSM PIN/password secret ID",
      "description" : "The secret ID using which the HSM's PIN/password can be obtained. This secret
ID will be resolved using one of the other secret stores configured.<br> It must not start or end
with the <code>.</code> character. <br>The <code>.</code> character must not be followed by another
<code>.</code> character.<br>Must contain <code>a-z</code>, <code>A-Z</code>, <code>0-9</code> and
<code>.</code> characters only.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "providerGuiceKey" : {
      "title" : "Provider Guice Key Name",
      "description" : "The name of a Guice key that can be used to obtain an initialised provider from
which the HSM keystore can be obtained.",
      "propertyOrder" : 200,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "leaseExpiryDuration" : {
      "title" : "Key lease expiry",
      "description" : "The amount of minutes a key can be cached from the keystore before it needs to
be reloaded.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.83.1.2. delete

Usage:

```
am> delete HsmSecretStore --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.83.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action HsmSecretStore --realm Realm --actionName getAllTypes
```

1.83.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action HsmSecretStore --realm Realm --actionName getCreatableTypes
```

1.83.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action HsmSecretStore --realm Realm --actionName nextdescendents
```

1.83.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query HsmSecretStore --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.83.1.7. read

Usage:

```
am> read HsmSecretStore --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.83.1.8. update

Usage:

```
am> update HsmSecretStore --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "file" : {
      "title" : "Configuration File",
      "description" : "The file containing initialisation configuration for the HSM.",
      "propertyOrder" : 100,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "storePassword" : {
      "title" : "HSM PIN/password secret ID",
      "description" : "The secret ID using which the HSM's PIN/password can be obtained. This secret
ID will be resolved using one of the other secret stores configured.<br> It must not start or end
with the <code>.</code> character. <br>The <code>.</code> character must not be followed by another
<code>.</code> character.<br>Must contain <code>a-z</code>, <code>A-Z</code>, <code>0-9</code> and
<code>.</code> characters only.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "providerGuiceKey" : {
      "title" : "Provider Guice Key Name",
      "description" : "The name of a Guice key that can be used to obtain an initialised provider from
which the HSM keystore can be obtained.",
      "propertyOrder" : 200,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
```

```
      "leaseExpiryDuration" : {
        "title" : "Key lease expiry",
        "description" : "The amount of minutes a key can be cached from the keystore before it needs to
 be reloaded.",
        "propertyOrder" : 400,
        "required" : true,
        "type" : "integer",
        "exampleValue" : ""
    }
  }
}
```

1.83.2. Global Operations

Resource path: `/global-config/secrets/stores/HsmSecretStore`

Resource version: `1.0`

1.83.2.1. create

Usage:

```
am> create HsmSecretStore --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "providerGuiceKey" : {
      "title" : "Provider Guice Key Name",
      "description" : "The name of a Guice key that can be used to obtain an initialised provider from
 which the HSM keystore can be obtained.",
      "propertyOrder" : 200,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "file" : {
      "title" : "Configuration File",
      "description" : "The file containing initialisation configuration for the HSM.",
      "propertyOrder" : 100,
      "required" : false,
      "type" : "string",
```

```
      "exampleValue" : ""
    },
    "leaseExpiryDuration" : {
      "title" : "Key lease expiry",
      "description" : "The amount of minutes a key can be cached from the keystore before it needs to
be reloaded.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "storePassword" : {
      "title" : "HSM PIN/password secret ID",
      "description" : "The secret ID using which the HSM's PIN/password can be obtained. This secret
ID will be resolved using one of the other secret stores configured.<br> It must not start or end
with the <code>.</code> character. <br>The <code>.</code> character must not be followed by another
<code>.</code> character.<br>Must contain <code>a-z</code>, <code>A-Z</code>, <code>0-9</code> and
<code>.</code> characters only.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.83.2.2. delete

Usage:

```
am> delete HsmSecretStore --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.83.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action HsmSecretStore --global --actionName getAllTypes
```

1.83.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action HsmSecretStore --global --actionName getCreatableTypes
```

1.83.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action HsmSecretStore --global --actionName nextdescendents
```

1.83.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query HsmSecretStore --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.83.2.7. read

Usage:

```
am> read HsmSecretStore --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.83.2.8. update

Usage:

```
am> update HsmSecretStore --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",
  "properties" : {
    "providerGuiceKey" : {
      "title" : "Provider Guice Key Name",
      "description" : "The name of a Guice key that can be used to obtain an initialised provider from
which the HSM keystore can be obtained.",
      "propertyOrder" : 200,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "file" : {
      "title" : "Configuration File",
      "description" : "The file containing initialisation configuration for the HSM.",
      "propertyOrder" : 100,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "leaseExpiryDuration" : {
      "title" : "Key lease expiry",
      "description" : "The amount of minutes a key can be cached from the keystore before it needs to
be reloaded.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "storePassword" : {
      "title" : "HSM PIN/password secret ID",
      "description" : "The secret ID using which the HSM's PIN/password can be obtained. This secret
ID will be resolved using one of the other secret stores configured.<br> It must not start or end
with the <code>.</code> character. <br>The <code>.</code> character must not be followed by another
<code>.</code> character.<br>Must contain <code>a-z</code>, <code>A-Z</code>, <code>0-9</code> and
<code>.</code> characters only.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.84. HttpBasicModule

1.84.1. Realm Operations

Resource path: `/realm-config/authentication/modules/httpbasic`

Resource version: 1.0

1.84.1.1. create

Usage:

```
am> create HttpBasicModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "backendModuleName" : {
      "title" : "Backend Module Name",
      "description" : "The name of the module that will be used to perform the
 authentication<br><br>The HTTP Basic authentication module collect the credentials from the user and
 will then supply said credentials to the backend authentication module using the shared state. ",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default). ",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.84.1.2. delete

Usage:

```
am> delete HttpBasicModule --realm Realm --id id
```

Parameters:

`--id`

> The unique identifier for the resource.

1.84.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action HttpBasicModule --realm Realm --actionName getAllTypes
```

1.84.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action HttpBasicModule --realm Realm --actionName getCreatableTypes
```

1.84.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action HttpBasicModule --realm Realm --actionName nextdescendents
```

1.84.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query HttpBasicModule --realm Realm --filter filter
```

Parameters:

`--filter`

> A CREST formatted query filter, where "true" will query all.

1.84.1.7. read

Usage:

```
am> read HttpBasicModule --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.84.1.8. update

Usage:

```
am> update HttpBasicModule --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "backendModuleName" : {
      "title" : "Backend Module Name",
      "description" : "The name of the module that will be used to perform the
 authentication<br><br>The HTTP Basic authentication module collect the credentials from the user and
 will then supply said credentials to the backend authentication module using the shared state. ",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default). ",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.84.2. Global Operations

Resource path: `/global-config/authentication/modules/httpbasic`

Resource version: `1.0`

1.84.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action HttpBasicModule --global --actionName getAllTypes
```

1.84.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action HttpBasicModule --global --actionName getCreatableTypes
```

1.84.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action HttpBasicModule --global --actionName nextdescendents
```

1.84.2.4. read

Usage:

```
am> read HttpBasicModule --global
```

1.84.2.5. update

Usage:

```
am> update HttpBasicModule --global --body body
```

Parameters:

`--body`

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with this module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default). ",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "backendModuleName" : {
          "title" : "Backend Module Name",
          "description" : "The name of the module that will be used to perform the
authentication<br><br>The HTTP Basic authentication module collect the credentials from the user and
will then supply said credentials to the backend authentication module using the shared state. ",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.85. IDMProvisioning

1.85.1. Realm Operations

Resource path: `/realm-config/services/idm-integration`

Resource version: `1.0`

1.85.1.1. create

Usage:

```
am> create IDMProvisioning --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "provisioningEncryptionAlgorithm" : {
      "title" : "Encryption Algorithm",
      "description" : "JWT encryption algorithm.",

```

1.85.1.2. delete

Usage:

```
am> delete IDMProvisioning --realm Realm
```

1.85.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action IDMProvisioning --realm Realm --actionName getAllTypes
```

1.85.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action IDMProvisioning --realm Realm --actionName getCreatableTypes
```

1.85.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action IDMProvisioning --realm Realm --actionName nextdescendents
```

1.85.1.6. read

Usage:

```
am> read IDMProvisioning --realm Realm
```

1.85.1.7. update

Usage:

```
am> update IDMProvisioning --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "provisioningEncryptionAlgorithm" : {
      "title" : "Encryption Algorithm",
      "description" : "JWT encryption algorithm.",

  }
}
```

1.85.2. Global Operations

Resource path: `/global-config/services/idm-integration`

Resource version: `1.0`

1.85.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action IDMProvisioning --global --actionName getAllTypes
```

1.85.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action IDMProvisioning --global --actionName getCreatableTypes
```

1.85.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action IDMProvisioning --global --actionName nextdescendents
```

1.85.2.4. read

Usage:

```
am> read IDMProvisioning --global
```

1.85.2.5. update

Usage:

```
am> update IDMProvisioning --global --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "provisioningEncryptionMethod" : {
          "title" : "Encryption Method",
          "description" : "JWT encryption method.",
          "propertyOrder" : 2280,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "provisioningEncryptionAlgorithm" : {
          "title" : "Encryption Algorithm",
          "description" : "JWT encryption algorithm.",

            "propertyOrder" : 2260,
            "required" : true,
            "type" : "string",
            "exampleValue" : ""
        }
    },
    "type" : "object",
    "title" : "Realm Defaults"
}
```

```
    }
}
```

1.86. IdRepository

1.86.1. Realm Operations

Resource path: `/realm-config/services/id-repositories`

Resource version: `1.0`

1.86.1.1. create

Usage:
```
am> create IdRepository --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:
```
{
  "type" : "object",
  "properties" : {
    "sunIdRepoAttributeValidator" : {
      "title" : "Attribute Validator Plug-in",
      "description" : "",
      "propertyOrder" : 300,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "sunIdRepoAttributeCombiner" : {
      "title" : "Attribute Combiner plug-in",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.86.1.2. delete

Usage:

```
am> delete IdRepository --realm Realm
```

1.86.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action IdRepository --realm Realm --actionName getAllTypes
```

1.86.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action IdRepository --realm Realm --actionName getCreatableTypes
```

1.86.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action IdRepository --realm Realm --actionName nextdescendents
```

1.86.1.6. read

Usage:

```
am> read IdRepository --realm Realm
```

1.86.1.7. update

Usage:

```
am> update IdRepository --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "sunIdRepoAttributeValidator" : {
      "title" : "Attribute Validator Plug-in",
      "description" : "",
      "propertyOrder" : 300,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "sunIdRepoAttributeCombiner" : {
      "title" : "Attribute Combiner plug-in",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.86.2. Global Operations

Resource path: `/global-config/services/id-repositories`

Resource version: `1.0`

1.86.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action IdRepository --global --actionName getAllTypes
```

1.86.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action IdRepository --global --actionName getCreatableTypes
```

1.86.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action IdRepository --global --actionName nextdescendents
```

1.86.2.4. read

Usage:

```
am> read IdRepository --global
```

1.86.2.5. update

Usage:

```
am> update IdRepository --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "sunIdRepoAttributeCombiner" : {
          "title" : "Attribute Combiner plug-in",
          "description" : "",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "sunIdRepoAttributeValidator" : {
          "title" : "Attribute Validator Plug-in",
          "description" : "",
          "propertyOrder" : 300,
          "required" : true,
          "items" : {
            "type" : "string"
          },
          "type" : "array",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.87. IdRepositoryUser

1.87.1. Global Operations

Resource path: `/global-config/services/id-repositories/user`

Resource version: `1.0`

1.87.1.1. create

Usage:

```
am> create IdRepositoryUser --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "postalAddress" : {
      "title" : "Home Address",

          "required" : true,
          "type" : "string",
          "format" : "password",
          "exampleValue" : ""
        },
        "mail" : {
          "title" : "Email Address",
```

```
            "description" : "",
            "propertyOrder" : 9500,
            "required" : false,
            "type" : "string",
            "exampleValue" : ""
        }
    }
}
```

1.87.1.2. delete

Usage:

```
am> delete IdRepositoryUser --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.87.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action IdRepositoryUser --global --actionName getAllTypes
```

1.87.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action IdRepositoryUser --global --actionName getCreatableTypes
```

1.87.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action IdRepositoryUser --global --actionName nextdescendents
```

1.87.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query IdRepositoryUser --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.87.1.7. read

Usage:

```
am> read IdRepositoryUser --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.87.1.8. update

Usage:

```
am> update IdRepositoryUser --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "postalAddress" : {
      "title" : "Home Address",
      "description" : "",
      "propertyOrder" : 9800,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "telephoneNumber" : {
      "title" : "Telephone Number",
      "description" : "",
      "propertyOrder" : 9700,

```

1.88. IdentityGatewayAgentGroups

1.88.1. Realm Operations

Agent Groups handler that is responsible for managing agent groups

Resource path: `/realm-config/agents/groups/IdentityGatewayAgent`

Resource version: `1.0`

1.88.1.1. create

Usage:

```
am> create IdentityGatewayAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "igTokenIntrospection" : {
```

```
        "title" : "Token Introspection",
        "description" : "Allows using this IG agent to introspect OAuth 2.0 tokens issued to any client.
<br>Select <code>None</code> to disable. Select <code>Realm Only</code> to allow introspection of
tokens in the same realm.",
        "propertyOrder" : 160,
        "required" : false,
        "type" : "string",
        "exampleValue" : ""
      },
      "status" : {
        "title" : "Status",
        "description" : "Status of the agent configuration.",
        "propertyOrder" : 200,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      },
      "igCdssoRedirectUrls" : {
        "title" : "Redirect URLs for CDSSO",
        "description" : "The list of redirect URLs for CDSSO. The valid value is in the following
format: <br>protocol://hostname:port/path<br> The protocol represents the protocol used, such as
http or https. The hostname represents the host name of the machine on which IG resides. The port
represents the port number on which IG is listening. The path represents the remainder of the
redirect URL. <br>Example:<br> http://openig.ext.com:8080/home/cdsso/redirect",
        "propertyOrder" : 150,
        "required" : false,
        "items" : {
          "type" : "string"
        },
        "type" : "array",
        "exampleValue" : ""
      }
    }
  }
}
```

1.88.1.2. delete

Usage:

```
am> delete IdentityGatewayAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.88.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action IdentityGatewayAgentGroups --realm Realm --actionName getAllTypes
```

1.88.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action IdentityGatewayAgentGroups --realm Realm --actionName getCreatableTypes
```

1.88.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action IdentityGatewayAgentGroups --realm Realm --actionName nextdescendents
```

1.88.1.6. query

Querying the agent groups of a specific type

Usage:

```
am> query IdentityGatewayAgentGroups --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.88.1.7. read

Usage:

```
am> read IdentityGatewayAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.88.1.8. update

Usage:

```
am> update IdentityGatewayAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "igTokenIntrospection" : {
      "title" : "Token Introspection",
      "description" : "Allows using this IG agent to introspect OAuth 2.0 tokens issued to any client.

      "exampleValue" : "",
      "properties" : {
        "inherited" : {
          "type" : "boolean",
          "required" : true
        },
        "value" : {
          "type" : "string",
          "required" : true
        }
      }
    },
    "userpassword" : {
      "title" : "Password",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    }
  }
}
```

1.89.1.2. delete

Usage:

```
am> delete IdentityGatewayAgents --realm Realm --id id
```

Parameters:

`--id`

> The unique identifier for the resource.

1.89.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action IdentityGatewayAgents --realm Realm --actionName getAllTypes
```

1.89.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action IdentityGatewayAgents --realm Realm --actionName getCreatableTypes
```

1.89.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action IdentityGatewayAgents --realm Realm --actionName nextdescendents
```

1.89.1.6. query

Querying the agents of a specific type

Usage:

```
am> query IdentityGatewayAgents --realm Realm --filter filter
```

Parameters:

`--filter`

> A CREST formatted query filter, where "true" will query all.

1.89.1.7. read

Usage:

```
am> read IdentityGatewayAgents --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.89.1.8. update

Usage:

```
am> update IdentityGatewayAgents --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "agentgroup" : {
      "title" : "Group",

1.90. IdffEntity

1.90.1. Realm Operations

Resource path: `/realm-config/federation/entityproviders/idff`

Resource version: `1.0`

1.90.1.1. create

Usage:

```
am> create IdffEntity --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "metadata" : {
      "title" : "Metadata",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "entityConfig" : {
      "title" : "Entity Configuration",
      "description" : "",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.90.1.2. delete

Usage:

```
am> delete IdffEntity --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.90.1.3. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query IdffEntity --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.90.1.4. read

Usage:

```
am> read IdffEntity --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.90.1.5. update

Usage:

```
am> update IdffEntity --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "metadata" : {
      "title" : "Metadata",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "entityConfig" : {
      "title" : "Entity Configuration",
      "description" : "",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.91. InnerTreeEvaluator

1.91.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/InnerTreeEvaluatorNode`

Resource version: `1.0`

1.91.1.1. create

Usage:

```
am> create InnerTreeEvaluator --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "tree" : {
      "title" : "Tree Name",
      "description" : "The name of the tree that will be evaluated.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "tree" ]
}
```

1.91.1.2. delete

Usage:

```
am> delete InnerTreeEvaluator --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.91.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action InnerTreeEvaluator --realm Realm --actionName getAllTypes
```

1.91.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action InnerTreeEvaluator --realm Realm --actionName getCreatableTypes
```

1.91.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action InnerTreeEvaluator --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.91.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action InnerTreeEvaluator --realm Realm --actionName nextdescendents
```

1.91.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query InnerTreeEvaluator --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.91.1.8. read

Usage:

```
am> read InnerTreeEvaluator --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.91.1.9. update

Usage:

```
am> update InnerTreeEvaluator --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "tree" : {
      "title" : "Tree Name",
      "description" : "The name of the tree that will be evaluated.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "tree" ]
}
```

1.92. J2EEAgentGroups

1.92.1. Realm Operations

Agent Groups handler that is responsible for managing agent groups

Resource path: `/realm-config/agents/groups/J2EEAgent`

Resource version: `1.0`

1.92.1.1. create

Usage:

```
am> create J2EEAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "amServicesJ2EEAgent" : {
      "type" : "object",

```

1.92.1.2. delete

Usage:

```
am> delete J2EEAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.92.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action J2EEAgentGroups --realm Realm --actionName getAllTypes
```

1.92.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action J2EEAgentGroups --realm Realm --actionName getCreatableTypes
```

1.92.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action J2EEAgentGroups --realm Realm --actionName nextdescendents
```

1.92.1.6. query

Querying the agent groups of a specific type

Usage:

```
am> query J2EEAgentGroups --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.92.1.7. read

Usage:

```
am> read J2EEAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.92.1.8. update

Usage:

```
am> update J2EEAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "amServicesJ2EEAgent" : {
      "type" : "object",
      "title" : "AM Services",
      "propertyOrder" : 3,
```

```

1.93. J2eeAgents

1.93.1. Realm Operations

Agents handler that is responsible for managing agents

Resource path: `/realm-config/agents/J2EEAgent`

Resource version: `1.0`

1.93.1.1. create

Usage:

```
am> create J2eeAgents --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "advancedJ2EEAgentConfig" : {
      "type" : "object",

              }
            }
          }
        }
      }
    }
  }
}
```

1.93.1.2. delete

Usage:

```
am> delete J2eeAgents --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.93.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action J2eeAgents --realm Realm --actionName getAllTypes
```

1.93.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action J2eeAgents --realm Realm --actionName getCreatableTypes
```

1.93.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action J2eeAgents --realm Realm --actionName nextdescendents
```

1.93.1.6. query

Querying the agents of a specific type

Usage:

```
am> query J2eeAgents --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.93.1.7. read

Usage:

```
am> read J2eeAgents --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.93.1.8. update

Usage:

```
am> update J2eeAgents --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```

1.94. JSONStdout

1.94.1. Realm Operations

Resource path: `/realm-config/services/audit/JSONStdout`

Resource version: `1.0`

1.94.1.1. create

Usage:

```
am> create JSONStdout --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonHandler" : {
      "type" : "object",
      "title" : "General Handler Configuration",
      "propertyOrder" : 0,
      "properties" : {
        "topics" : {
          "title" : "Topics",
          "description" : "List of topics handled by an audit event handler.",
          "propertyOrder" : 400,
          "required" : true,
          "items" : {
```

```
          "type" : "string"
        },
        "type" : "array",
        "exampleValue" : ""
      },
      "enabled" : {
        "title" : "Enabled",
        "description" : "Enables or disables an audit event handler.",
        "propertyOrder" : 300,
        "required" : true,
        "type" : "boolean",
        "exampleValue" : ""
      }
    }
  },
  "commonHandlerPlugin" : {
    "type" : "object",
    "title" : "Audit Event Handler Factory",
    "propertyOrder" : 1,
    "properties" : {
      "handlerFactory" : {
        "title" : "Factory Class Name",
        "description" : "The fully qualified class name of the factory
responsible for creating the Audit Event Handler. The class must implement
<code>org.forgerock.openam.audit.AuditEventHandlerFactory</code>.",
        "propertyOrder" : 1900,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      }
    }
  },
  "jsonConfig" : {
    "type" : "object",
    "title" : "JSON Configuration",
    "propertyOrder" : 2,
    "properties" : {
      "elasticsearchCompatible" : {
        "title" : "ElasticSearch JSON Format Compatible",
        "description" : "JSON format should be transformed to be compatible with  ElasticSearch
format restrictions.",
        "propertyOrder" : 1700,
        "required" : true,
        "type" : "boolean",
        "exampleValue" : ""
      }
    }
  }
 }
}
```

1.94.1.2. delete

Usage:

```
am> delete JSONStdout --realm Realm --id id
```

Parameters:

`--id`

> The unique identifier for the resource.

1.94.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action JSONStdout --realm Realm --actionName getAllTypes
```

1.94.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action JSONStdout --realm Realm --actionName getCreatableTypes
```

1.94.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action JSONStdout --realm Realm --actionName nextdescendents
```

1.94.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query JSONStdout --realm Realm --filter filter
```

Parameters:

`--filter`

> A CREST formatted query filter, where "true" will query all.

1.94.1.7. read

Usage:

```
am> read JSONStdout --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.94.1.8. update

Usage:

```
am> update JSONStdout --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonHandler" : {
      "type" : "object",

1.94.2. Global Operations

Resource path: `/global-config/services/audit/JSONStdout`

Resource version: `1.0`

1.94.2.1. create

Usage:

```
am> create JSONStdout --global --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",
  "properties" : {
    "commonHandler" : {
      "type" : "object",
      "title" : "General Handler Configuration",
      "propertyOrder" : 0,
      "properties" : {
        "topics" : {
          "title" : "Topics",
          "description" : "List of topics handled by an audit event handler.",
          "propertyOrder" : 400,
          "required" : true,
          "items" : {
            "type" : "string"
          },
          "type" : "array",
          "exampleValue" : ""
        },
        "enabled" : {
          "title" : "Enabled",
          "description" : "Enables or disables an audit event handler.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        }
      }
    },
    "jsonConfig" : {
      "type" : "object",
      "title" : "JSON Configuration",
      "propertyOrder" : 2,
      "properties" : {
        "elasticsearchCompatible" : {
          "title" : "ElasticSearch JSON Format Compatible",
          "description" : "JSON format should be transformed to be compatible with  ElasticSearch
format restrictions.",
          "propertyOrder" : 1700,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        }
      }
    },
    "commonHandlerPlugin" : {
      "type" : "object",
      "title" : "Audit Event Handler Factory",
      "propertyOrder" : 1,
      "properties" : {
        "handlerFactory" : {
          "title" : "Factory Class Name",
          "description" : "The fully qualified class name of the factory
responsible for creating the Audit Event Handler. The class must implement
<code>org.forgerock.openam.audit.AuditEventHandlerFactory</code>.",
```

```
            "propertyOrder" : 1900,
            "required" : true,
            "type" : "string",
            "exampleValue" : ""
        }
      }
    }
  }
}
```

1.94.2.2. delete

Usage:

```
am> delete JSONStdout --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.94.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action JSONStdout --global --actionName getAllTypes
```

1.94.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action JSONStdout --global --actionName getCreatableTypes
```

1.94.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action JSONStdout --global --actionName nextdescendents
```

1.94.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query JSONStdout --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.94.2.7. read

Usage:

```
am> read JSONStdout --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.94.2.8. update

Usage:

```
am> update JSONStdout --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonHandler" : {
      "type" : "object",
      "title" : "General Handler Configuration",
      "propertyOrder" : 0,
      "properties" : {
        "topics" : {
          "title" : "Topics",
          "description" : "List of topics handled by an audit event handler.",
          "propertyOrder" : 400,
          "required" : true,
          "items" : {
            "type" : "string"
```

```
          },
          "type" : "array",
          "exampleValue" : ""
        },
        "enabled" : {
          "title" : "Enabled",
          "description" : "Enables or disables an audit event handler.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        }
      }
    },
    "jsonConfig" : {
      "type" : "object",
      "title" : "JSON Configuration",
      "propertyOrder" : 2,
      "properties" : {
        "elasticsearchCompatible" : {
          "title" : "ElasticSearch JSON Format Compatible",
          "description" : "JSON format should be transformed to be compatible with  ElasticSearch
format restrictions.",
          "propertyOrder" : 1700,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        }
      }
    },
    "commonHandlerPlugin" : {
      "type" : "object",
      "title" : "Audit Event Handler Factory",
      "propertyOrder" : 1,

    }
  }
}
```

1.95. Jdbc

1.95.1. Realm Operations

Resource path: `/realm-config/services/audit/JDBC`

Resource version: `1.0`

1.95.1.1. create

Usage:

```
am> create Jdbc --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jdbcDatabaseConfig" : {
      "type" : "object",

}
```

1.95.1.2. delete

Usage:

```
am> delete Jdbc --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.95.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Jdbc --realm Realm --actionName getAllTypes
```

1.95.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Jdbc --realm Realm --actionName getCreatableTypes
```

1.95.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Jdbc --realm Realm --actionName nextdescendents
```

1.95.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Jdbc --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.95.1.7. read

Usage:

```
am> read Jdbc --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.95.1.8. update

Usage:

```
am> update Jdbc --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jdbcDatabaseConfig" : {
      "type" : "object",

1.95.2. Global Operations

Resource path: `/global-config/services/audit/JDBC`

Resource version: `1.0`

1.95.2.1. create

Usage:

```
am> create Jdbc --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jdbcDatabaseConfig" : {
```

```
      "type" : "object",
      "title" : "Database Configuration",
      "propertyOrder" : 2,
      "properties" : {
        "password" : {
          "title" : "Database Password",
          "description" : "Specifies the password to access the database server.",
          "propertyOrder" : 3700,
          "required" : true,
          "type" : "string",
          "format" : "password",
          "exampleValue" : ""
        },
        "connectionTimeout" : {
          "title" : "Connection Timeout (seconds)",
          "description" : "Specifies the maximum wait time before failing the connection, in
seconds.",
          "propertyOrder" : 3800,
          "required" : true,

   }
}
```

1.95.2.2. delete

Usage:

```
am> delete Jdbc --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.95.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Jdbc --global --actionName getAllTypes
```

1.95.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Jdbc --global --actionName getCreatableTypes
```

1.95.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Jdbc --global --actionName nextdescendents
```

1.95.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Jdbc --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.95.2.7. read

Usage:

```
am> read Jdbc --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.95.2.8. update

Usage:

```
am> update Jdbc --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jdbcDatabaseConfig" : {
      "type" : "object",

1.96. JdbcModule

1.96.1. Realm Operations

Resource path: `/realm-config/authentication/modules/jdbc`

Resource version: `1.0`

1.96.1.1. create

Usage:

```
am> create JdbcModule --realm Realm --id id --body body
```

Parameters:

--id

   The unique identifier for the resource.

--body

   The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "passwordColumn" : {
      "title" : "Password Column Name",
      "description" : "The name of the column in the database containing the user
 passwords<br><br>This property will be used to retrieve the correct column containing the password
 from the results table returned by the database",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "password" : {
      "title" : "Database Password",
      "description" : "The password used to authenticate to the database<br><br><i>NB </i>Only used
 when connection type is JDBC",
      "propertyOrder" : 600,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "passwordTransformClass" : {
```

```
      "title" : "Class to Transform Password Syntax",
      "description" : "This class is used to transform the supplied credentials from the
 database.<br><br>The default implementation for this property is <code>ClearTextTransform</
code> that performs no transformation. If the supplied credentials need to be transformed
 before comparing with the password field retrieved from the database, a custom implementation
 should be provided. Any custom implementation must implement the following interface
 <code>com.sun.identity.authentication.modules.jdbc.JDBCPasswordSyntaxTransform</code>",

      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.96.1.2. delete

Usage:

```
am> delete JdbcModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.96.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action JdbcModule --realm Realm --actionName getAllTypes
```

1.96.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action JdbcModule --realm Realm --actionName getCreatableTypes
```

1.96.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action JdbcModule --realm Realm --actionName nextdescendents
```

1.96.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query JdbcModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.96.1.7. read

Usage:

```
am> read JdbcModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.96.1.8. update

Usage:

```
am> update JdbcModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "passwordColumn" : {
      "title" : "Password Column Name",
      "description" : "The name of the column in the database containing the user

```

1.96.2. Global Operations

Resource path: `/global-config/authentication/modules/jdbc`

Resource version: `1.0`

1.96.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action JdbcModule --global --actionName getAllTypes
```

1.96.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action JdbcModule --global --actionName getCreatableTypes
```

1.96.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action JdbcModule --global --actionName nextdescendents
```

1.96.2.4. read

Usage:

```
am> read JdbcModule --global
```

1.96.2.5. update

Usage:

```
am> update JdbcModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "passwordColumn" : {

```

1.97.1.2. delete

Usage:

```
am> delete Jms --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.97.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Jms --realm Realm --actionName getAllTypes
```

1.97.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Jms --realm Realm --actionName getCreatableTypes
```

1.97.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Jms --realm Realm --actionName nextdescendents
```

1.97.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Jms --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.97.1.7. read

Usage:

```
am> read Jms --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.97.1.8. update

Usage:

```
am> update Jms --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```

      }
    }
  }
}
```

1.97.2.2. delete

Usage:

```
am> delete Jms --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.97.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Jms --global --actionName getAllTypes
```

1.97.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Jms --global --actionName getCreatableTypes
```

1.97.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Jms --global --actionName nextdescendents
```

1.97.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Jms --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.97.2.7. read

Usage:

```
am> read Jms --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.97.2.8. update

Usage:

```
am> update Jms --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jmsConfiguration" : {
      "type" : "object",
      "title" : "JMS Configuration",
      "propertyOrder" : 2,
      "properties" : {
        "deliveryMode" : {
          "title" : "Delivery Mode",
          "description" : "Specifies whether JMS messages used to transmit audit events use persistent
or non-persistent delivery.<p><p>With persistent delivery, the JMS provider ensures that messages
are not lost in transit in case of a provider failure by logging messages to storage when they are
sent.<p>Specify the delivery mode as persistent if it is unacceptable for delivery of audit events
to be lost in JMS transit. If the possible loss of audit events is acceptable, choose non-persistent
delivery, which provides better performance.",

1.98. Json

1.98.1. Realm Operations

Resource path: `/realm-config/services/audit/JSON`

Resource version: `1.0`

1.98.1.1. create

Usage:

```
am> create Json --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jsonFileRotation" : {
      "type" : "object",
      "title" : "File Rotation",
      "propertyOrder" : 3,
      "properties" : {
        "rotationFilePrefix" : {
          "title" : "File Rotation Prefix",
          "description" : "Prefix to prepend to audit files when rotating audit files.",

        },
        "elasticsearchCompatible" : {
          "title" : "ElasticSearch JSON Format Compatible",
          "description" : "JSON format should be transformed to be compatible with  ElasticSearch
 format restrictions.",
          "propertyOrder" : 1700,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        }
      }
    }
  }
}
```

1.98.1.2. delete

Usage:

```
am> delete Json --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.98.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Json --realm Realm --actionName getAllTypes
```

1.98.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Json --realm Realm --actionName getCreatableTypes
```

1.98.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Json --realm Realm --actionName nextdescendents
```

1.98.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Json --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.98.1.7. read

Usage:

```
am> read Json --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.98.1.8. update

Usage:

```
am> update Json --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jsonFileRotation" : {
      "type" : "object",
      "title" : "File Rotation",
      "propertyOrder" : 3,
      "properties" : {
        "rotationFilePrefix" : {
          "title" : "File Rotation Prefix",
          "description" : "Prefix to prepend to audit files when rotating audit files.",
          "propertyOrder" : 800,

1.98.2. Global Operations

Resource path: `/global-config/services/audit/JSON`

Resource version: `1.0`

1.98.2.1. create

Usage:
```
am> create Json --global --id id --body body
```

Parameters:

`--id`

    The unique identifier for the resource.

`--body`

    The resource in JSON format, described by the following JSON schema:
```
{
  "type" : "object",
```

```
 "properties" : {
   "commonHandlerPlugin" : {
     "type" : "object",
     "title" : "Audit Event Handler Factory",
     "propertyOrder" : 1,
     "properties" : {
       "handlerFactory" : {
         "title" : "Factory Class Name",
         "description" : "The fully qualified class name of the factory
responsible for creating the Audit Event Handler. The class must implement
<code>org.forgerock.openam.audit.AuditEventHandlerFactory</code>.",

 }
}
```

1.98.2.2. delete

Usage:

```
am> delete Json --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.98.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Json --global --actionName getAllTypes
```

1.98.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Json --global --actionName getCreatableTypes
```

1.98.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Json --global --actionName nextdescendents
```

1.98.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Json --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.98.2.7. read

Usage:

```
am> read Json --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.98.2.8. update

Usage:

```
am> update Json --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonHandlerPlugin" : {
      "type" : "object",
      "title" : "Audit Event Handler Factory",
      "propertyOrder" : 1,
```

```
      "properties" : {
        "handlerFactory" : {
          "title" : "Factory Class Name",
          "description" : "The fully qualified class name of the factory
responsible for creating the Audit Event Handler. The class must implement
<code>org.forgerock.openam.audit.AuditEventHandlerFactory</code>.",
          "propertyOrder" : 1900,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      }
    },
    "commonHandler" : {
      "type" : "object",
      "title" : "General Handler Configuration",
      "propertyOrder" : 0,
      "properties" : {
        "enabled" : {

1.99. JwtProofOfPossessionModule

1.99.1. Realm Operations

Resource path: `/realm-config/authentication/modules/authJwtPoP`

Resource version: `1.0`

1.99.1.1. create

Usage:

```
am> create JwtProofOfPossessionModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.",
      "propertyOrder" : 10000,
      "required" : true,
```

```
        "type" : "integer",
        "exampleValue" : ""
    },
    "responseEncryptionCipher" : {
        "title" : "Response Encryption Cipher",
        "description" : "The authenticated encryption (AEAD) scheme to use for the response.",
        "propertyOrder" : 350,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "challengeSigningKey" : {
        "title" : "Challenge Signing Key",
        "description" : "Name of the key (in the AM keystore) to use to sign challenges.",
        "propertyOrder" : 200,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "subjectJwkSetAttr" : {
        "title" : "Subject JWK Set Attribute",
        "description" : "Subject profile attribute that contains a JWK Set of confirmation and
 encryption keys.",
        "propertyOrder" : 100,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "responseEncryptionMethod" : {
        "title" : "Response Encryption Scheme",
        "description" : "Key exchange method to use for responses: ephemeral elliptic curve Diffie-
Hellman (ECDHE)key agreement or using a pre-shared key (PSK) from the subject's JWK Set.",
        "propertyOrder" : 300,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "enableTlsSessionBinding" : {
        "title" : "Use TLS Session Binding",
        "description" : "If enabled the response must arrive in the same TLS (HTTPS) session as the
 challenge was issued.",
        "propertyOrder" : 400,
        "required" : true,
        "type" : "boolean",
        "exampleValue" : ""
    }
  }
}
```

1.99.1.2. delete

Usage:

```
am> delete JwtProofOfPossessionModule --realm Realm --id id
```

Parameters:

`--id`

> The unique identifier for the resource.

1.99.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action JwtProofOfPossessionModule --realm Realm --actionName getAllTypes
```

1.99.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action JwtProofOfPossessionModule --realm Realm --actionName getCreatableTypes
```

1.99.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action JwtProofOfPossessionModule --realm Realm --actionName nextdescendents
```

1.99.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query JwtProofOfPossessionModule --realm Realm --filter filter
```

Parameters:

`--filter`

> A CREST formatted query filter, where "true" will query all.

1.99.1.7. read

Usage:

```
am> read JwtProofOfPossessionModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.99.1.8. update

Usage:

```
am> update JwtProofOfPossessionModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.",
      "propertyOrder" : 10000,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "responseEncryptionCipher" : {
      "title" : "Response Encryption Cipher",
      "description" : "The authenticated encryption (AEAD) scheme to use for the response.",
      "propertyOrder" : 350,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "challengeSigningKey" : {
      "title" : "Challenge Signing Key",
      "description" : "Name of the key (in the AM keystore) to use to sign challenges.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "subjectJwkSetAttr" : {
      "title" : "Subject JWK Set Attribute",
      "description" : "Subject profile attribute that contains a JWK Set of confirmation and
encryption keys.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
```

```
    },
    "responseEncryptionMethod" : {
      "title" : "Response Encryption Scheme",
      "description" : "Key exchange method to use for responses: ephemeral elliptic curve Diffie-
Hellman (ECDHE)key agreement or using a pre-shared key (PSK) from the subject's JWK Set.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "enableTlsSessionBinding" : {
      "title" : "Use TLS Session Binding",
      "description" : "If enabled the response must arrive in the same TLS (HTTPS) session as the
 challenge was issued.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    }
  }
}
```

1.99.2. Global Operations

Resource path: `/global-config/authentication/modules/authJwtPoP`

Resource version: `1.0`

1.99.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action JwtProofOfPossessionModule --global --actionName getAllTypes
```

1.99.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action JwtProofOfPossessionModule --global --actionName getCreatableTypes
```

1.99.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action JwtProofOfPossessionModule --global --actionName nextdescendents
```

1.99.2.4. read

Usage:

```
am> read JwtProofOfPossessionModule --global
```

1.99.2.5. update

Usage:

```
am> update JwtProofOfPossessionModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with this module.",
          "propertyOrder" : 10000,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "responseEncryptionCipher" : {
          "title" : "Response Encryption Cipher",
          "description" : "The authenticated encryption (AEAD) scheme to use for the response.",
          "propertyOrder" : 350,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "enableTlsSessionBinding" : {
          "title" : "Use TLS Session Binding",
          "description" : "If enabled the response must arrive in the same TLS (HTTPS) session as the
challenge was issued.",
          "propertyOrder" : 400,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        },
        "challengeSigningKey" : {
          "title" : "Challenge Signing Key",
          "description" : "Name of the key (in the AM keystore) to use to sign challenges.",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
```

```
        },
        "responseEncryptionMethod" : {
          "title" : "Response Encryption Scheme",
          "description" : "Key exchange method to use for responses: ephemeral elliptic curve Diffie-
Hellman (ECDHE)key agreement or using a pre-shared key (PSK) from the subject's JWK Set.",
          "propertyOrder" : 300,
          "required" : true,

          "exampleValue" : ""
        },
        "subjectJwkSetAttr" : {
          "title" : "Subject JWK Set Attribute",
          "description" : "Subject profile attribute that contains a JWK Set of confirmation and
 encryption keys.",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.100. KbaQuestions

1.100.1. Realm Operations

KBA resource is responsible for delivering up configured security questions.

Resource path: `/selfservice/kba`

Resource version: `1.0`

1.100.1.1. read

Read the configured security questions.

Usage:

```
am> read KbaQuestions --realm Realm
```

1.101. KeyStoreMappings

1.101.1. Realm Operations

Resource path: `/realm-config/secrets/stores/KeyStoreSecretStore/{KeyStoreSecretStore}/mappings`

Resource version: `1.0`

1.101.1.1. create

Usage:

```
am> create KeyStoreMappings --realm Realm --KeyStoreSecretStore KeyStoreSecretStore --id id --body body
```

Parameters:

--KeyStoreSecretStore

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "aliases" : {
      "title" : "Aliases",
      "description" : "The list of keystore aliases that can resolve the secret. The first element of
the alias list determines which alias is the \"active\" one. Active secrets are used for signature
generation and encryption, while the non-active secrets are mainly used for signature verification
and decryption.",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string",
        "minLength" : 1
      },
      "minItems" : 1,
      "uniqueItems" : true,
      "type" : "array",
      "exampleValue" : ""
    },
    "secretId" : {
      "title" : "Secret ID",
      "description" : "The secret ID that is to be associated with an alias.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.101.1.2. delete

Usage:

```
am> delete KeyStoreMappings --realm Realm --KeyStoreSecretStore KeyStoreSecretStore --id id
```

Parameters:

--KeyStoreSecretStore

--id

The unique identifier for the resource.

1.101.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action KeyStoreMappings --realm Realm --KeyStoreSecretStore KeyStoreSecretStore --actionName
  getAllTypes
```

Parameters:

--KeyStoreSecretStore

1.101.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action KeyStoreMappings --realm Realm --KeyStoreSecretStore KeyStoreSecretStore --actionName
  getCreatableTypes
```

Parameters:

--KeyStoreSecretStore

1.101.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action KeyStoreMappings --realm Realm --KeyStoreSecretStore KeyStoreSecretStore --actionName
   nextdescendents
```

Parameters:

--KeyStoreSecretStore

1.101.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query KeyStoreMappings --realm Realm --KeyStoreSecretStore KeyStoreSecretStore --filter filter
```

Parameters:

--KeyStoreSecretStore

--filter

    A CREST formatted query filter, where "true" will query all.

1.101.1.7. read

Usage:

```
am> read KeyStoreMappings --realm Realm --KeyStoreSecretStore KeyStoreSecretStore --id id
```

Parameters:

--KeyStoreSecretStore

--id

    The unique identifier for the resource.

1.101.1.8. update

Usage:

```
am> update KeyStoreMappings --realm Realm --KeyStoreSecretStore KeyStoreSecretStore --id id --body body
```

Parameters:

--KeyStoreSecretStore

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "aliases" : {
      "title" : "Aliases",
      "description" : "The list of keystore aliases that can resolve the secret. The first element of
 the alias list determines which alias is the \"active\" one. Active secrets are used for signature
 generation and encryption, while the non-active secrets are mainly used for signature verification
 and decryption.",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string",
        "minLength" : 1
      },
      "minItems" : 1,
      "uniqueItems" : true,
      "type" : "array",
      "exampleValue" : ""
    },
    "secretId" : {
      "title" : "Secret ID",
      "description" : "The secret ID that is to be associated with an alias.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.101.2. Global Operations

Resource path: `/global-config/secrets/stores/KeyStoreSecretStore/{KeyStoreSecretStore}/mappings`

Resource version: `1.0`

1.101.2.1. create

Usage:

```
am> create KeyStoreMappings --global --KeyStoreSecretStore KeyStoreSecretStore --id id --body body
```

Parameters:

--KeyStoreSecretStore

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "secretId" : {
      "title" : "Secret ID",
      "description" : "The secret ID that is to be associated with an alias.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "aliases" : {
      "title" : "Aliases",
      "description" : "The list of keystore aliases that can resolve the secret. The first element of
 the alias list determines which alias is the \"active\" one. Active secrets are used for signature
generation and encryption, while the non-active secrets are mainly used for signature verification
and decryption.",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string",
        "minLength" : 1
      },
      "minItems" : 1,
      "uniqueItems" : true,
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.101.2.2. delete

Usage:

```
am> delete KeyStoreMappings --global --KeyStoreSecretStore KeyStoreSecretStore --id id
```

Parameters:

--KeyStoreSecretStore

--id

> The unique identifier for the resource.

1.101.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action KeyStoreMappings --global --KeyStoreSecretStore KeyStoreSecretStore --actionName getAllTypes
```

Parameters:

--KeyStoreSecretStore

1.101.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action KeyStoreMappings --global --KeyStoreSecretStore KeyStoreSecretStore --actionName
  getCreatableTypes
```

Parameters:

--KeyStoreSecretStore

1.101.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action KeyStoreMappings --global --KeyStoreSecretStore KeyStoreSecretStore --actionName
  nextdescendents
```

Parameters:

--KeyStoreSecretStore

1.101.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query KeyStoreMappings --global --KeyStoreSecretStore KeyStoreSecretStore --filter filter
```

Parameters:

--KeyStoreSecretStore

--filter

> A CREST formatted query filter, where "true" will query all.

1.101.2.7. read

Usage:

```
am> read KeyStoreMappings --global --KeyStoreSecretStore KeyStoreSecretStore --id id
```

Parameters:

--KeyStoreSecretStore

--id

> The unique identifier for the resource.

1.101.2.8. update

Usage:

```
am> update KeyStoreMappings --global --KeyStoreSecretStore KeyStoreSecretStore --id id --body body
```

Parameters:

--KeyStoreSecretStore

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "secretId" : {
      "title" : "Secret ID",
      "description" : "The secret ID that is to be associated with an alias.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "aliases" : {
      "title" : "Aliases",
      "description" : "The list of keystore aliases that can resolve the secret. The first element of
the alias list determines which alias is the \"active\" one. Active secrets are used for signature
generation and encryption, while the non-active secrets are mainly used for signature verification
and decryption.",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string",
        "minLength" : 1
      },
      "minItems" : 1,
      "uniqueItems" : true,
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.102. KeyStoreSecretStore

1.102.1. Realm Operations

Resource path: `/realm-config/secrets/stores/KeyStoreSecretStore`

Resource version: `1.0`

1.102.1.1. create

Usage:

```
am> create KeyStoreSecretStore --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "providerName" : {
      "title" : "Provider name",
      "description" : "The classname of a provider to use to load the keystore. If blank, the JRE
 default will be used.",
      "propertyOrder" : 300,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "storetype" : {
      "title" : "Keystore type",
      "description" : "The type of the keystore (JKS, JCEKS, PKCS11, PKCS12, others). This must be a
 keystore type known or configured on the JRE.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "leaseExpiryDuration" : {
      "title" : "Key lease expiry",
      "description" : "The amount of minutes a key can be cached from the keystore before it needs to
 be reloaded.",
      "propertyOrder" : 600,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "file" : {
      "title" : "File",
      "description" : "The keystore file to use",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "keyEntryPassword" : {
      "title" : "Entry password secret ID",
      "description" : "The secret value from which the entry password can be obtained, or none
 if the password is blank. This secret ID will be resolved using one of the other secret stores
 configured.<br> It must not start or end with the <code>.</code> character. <br>The <code>.</code>
 character must not be followed by another <code>.</code> character.<br>Must contain <code>a-z</code>,
 <code>A-Z</code>, <code>0-9</code> and <code>.</code> characters only.",
      "propertyOrder" : 500,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "storePassword" : {
      "title" : "Store password secret ID",
      "description" : "The secret ID from which the store password can be obtained, or none if
 the password is blank. This secret ID will be resolved using one of the other secret stores
 configured.<br> It must not start or end with the <code>.</code> character <br>The <code>.</code>
```

```
character must not be followed by another <code>.</code> character.<br>Must contain <code>a-z</code>,
    <code>A-Z</code>, <code>0-9</code> and <code>.</code> characters only.",
        "propertyOrder" : 400,
        "required" : false,
        "type" : "string",
        "exampleValue" : ""
    }
  }
}
```

1.102.1.2. delete

Usage:

```
am> delete KeyStoreSecretStore --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.102.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action KeyStoreSecretStore --realm Realm --actionName getAllTypes
```

1.102.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action KeyStoreSecretStore --realm Realm --actionName getCreatableTypes
```

1.102.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action KeyStoreSecretStore --realm Realm --actionName nextdescendents
```

1.102.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query KeyStoreSecretStore --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.102.1.7. read

Usage:

```
am> read KeyStoreSecretStore --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.102.1.8. update

Usage:

```
am> update KeyStoreSecretStore --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "providerName" : {
      "title" : "Provider name",
      "description" : "The classname of a provider to use to load the keystore. If blank, the JRE
 default will be used.",
      "propertyOrder" : 300,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
```

```
    "storetype" : {
      "title" : "Keystore type",
      "description" : "The type of the keystore (JKS, JCEKS, PKCS11, PKCS12, others). This must be a
  keystore type known or configured on the JRE.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "leaseExpiryDuration" : {
      "title" : "Key lease expiry",
      "description" : "The amount of minutes a key can be cached from the keystore before it needs to
  be reloaded.",
      "propertyOrder" : 600,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "file" : {
      "title" : "File",
      "description" : "The keystore file to use",

      "exampleValue" : ""
    }
  }
}
```

1.102.2.2. delete

Usage:

```
am> delete KeyStoreSecretStore --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.102.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action KeyStoreSecretStore --global --actionName getAllTypes
```

1.102.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action KeyStoreSecretStore --global --actionName getCreatableTypes
```

1.102.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action KeyStoreSecretStore --global --actionName nextdescendents
```

1.102.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query KeyStoreSecretStore --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.102.2.7. read

Usage:

```
am> read KeyStoreSecretStore --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.102.2.8. update

Usage:

```
am> update KeyStoreSecretStore --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "storePassword" : {
      "title" : "Store password secret ID",
      "description" : "The secret ID from which the store password can be obtained, or none if
 the password is blank. This secret ID will be resolved using one of the other secret stores
 configured.<br> It must not start or end with the <code>.</code> character <br>The <code>.</code>
 character must not be followed by another <code>.</code> character.<br>Must contain <code>a-z</code>,
 <code>A-Z</code>, <code>0-9</code> and <code>.</code> characters only.",
      "propertyOrder" : 400,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "keyEntryPassword" : {
      "title" : "Entry password secret ID",

```

1.103.1.2. delete

Usage:

```
am> delete LDAPDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.103.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action LDAPDecision --realm Realm --actionName getAllTypes
```

1.103.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action LDAPDecision --realm Realm --actionName getCreatableTypes
```

1.103.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action LDAPDecision --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.103.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action LDAPDecision --realm Realm --actionName nextdescendents
```

1.103.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query LDAPDecision --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.103.1.8. read

Usage:

```
am> read LDAPDecision --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.103.1.9. update

Usage:

```
am> update LDAPDecision --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

```

1.104.1.2. delete

Usage:

```
am> delete LdapModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.104.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action LdapModule --realm Realm --actionName getAllTypes
```

1.104.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action LdapModule --realm Realm --actionName getCreatableTypes
```

1.104.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action LdapModule --realm Realm --actionName nextdescendents
```

1.104.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query LdapModule --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.104.1.7. read

Usage:

```
am> read LdapModule --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.104.1.8. update

Usage:

```
am> update LdapModule --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

1.104.2. Global Operations

Resource path: `/global-config/authentication/modules/ldap`

Resource version: 1.0

1.104.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action LdapModule --global --actionName getAllTypes
```

1.104.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action LdapModule --global --actionName getCreatableTypes
```

1.104.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action LdapModule --global --actionName nextdescendents
```

1.104.2.4. read

Usage:

```
am> read LdapModule --global
```

1.104.2.5. update

Usage:

```
am> update LdapModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {

```

1.105.1.2. delete

Usage:

```
am> delete LegacyUserSelfService --realm Realm
```

1.105.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action LegacyUserSelfService --realm Realm --actionName getAllTypes
```

1.105.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action LegacyUserSelfService --realm Realm --actionName getCreatableTypes
```

1.105.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action LegacyUserSelfService --realm Realm --actionName nextdescendents
```

1.105.1.6. read

Usage:

```
am> read LegacyUserSelfService --realm Realm
```

1.105.1.7. update

Usage:

```
am> update LegacyUserSelfService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "forgotPasswordConfirmationUrl" : {
      "title" : "Forgot Password Confirmation Email URL",

```

1.106.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Logging --global --actionName getCreatableTypes
```

1.106.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Logging --global --actionName nextdescendents
```

1.106.1.4. read

Usage:

```
am> read Logging --global
```

1.106.1.5. update

Usage:

```
am> update Logging --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "database" : {
      "type" : "object",

1.107. MembershipModule

1.107.1. Realm Operations

Resource path: /realm-config/authentication/modules/membership

Resource version: 1.0

1.107.1.1. create

Usage:

```
am> create MembershipModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaultUserRoles" : {
      "title" : "Default User Roles",
      "description" : "The role DN's that will be assigned to the user.<br><br><i>NB </i>Roles are
 only supported in Sun Directory Server Enterprise Edition",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "minimumPasswordLength" : {
      "title" : "Minimum Password Length",
      "description" : "The minimum length of the user password.<br><br>Setting this value to 0
disables this functionality.<br/><br/><i>NB </i>This feature is separate from any password policy in
the underlying data store",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "defaultUserStatus" : {
      "title" : "User Status After Registration",
      "description" : "Determines if the user account should be automatically active after
registration completes.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.107.1.2. delete

Usage:

```
am> delete MembershipModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.107.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action MembershipModule --realm Realm --actionName getAllTypes
```

1.107.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action MembershipModule --realm Realm --actionName getCreatableTypes
```

1.107.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action MembershipModule --realm Realm --actionName nextdescendents
```

1.107.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query MembershipModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.107.1.7. read

Usage:

```
am> read MembershipModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.107.1.8. update

Usage:

```
am> update MembershipModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaultUserRoles" : {
      "title" : "Default User Roles",

1.107.2. Global Operations

Resource path: `/global-config/authentication/modules/membership`

Resource version: `1.0`

1.107.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action MembershipModule --global --actionName getAllTypes
```

1.107.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action MembershipModule --global --actionName getCreatableTypes
```

1.107.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action MembershipModule --global --actionName nextdescendents
```

1.107.2.4. read

Usage:

```
am> read MembershipModule --global
```

1.107.2.5. update

Usage:

```
am> update MembershipModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "minimumPasswordLength" : {
          "title" : "Minimum Password Length",
          "description" : "The minimum length of the user password.<br><br>Setting this value to 0
 disables this functionality.<br/><br/><i>NB </i>This feature is separate from any password policy in
the underlying data store",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "defaultUserRoles" : {
          "title" : "Default User Roles",
          "description" : "The role DN's that will be assigned to the user.<br><br><i>NB </i>Roles are
only supported in Sun Directory Server Enterprise Edition",
          "propertyOrder" : 200,
          "required" : true,
          "items" : {
            "type" : "string"
          },
          "type" : "array",
          "exampleValue" : ""
        },
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with this module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default).",
```

```
          "propertyOrder" : 400,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "defaultUserStatus" : {
          "title" : "User Status After Registration",
          "description" : "Determines if the user account should be automatically active after
 registration completes.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.108. MessageNode

1.108.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/MessageNode`

Resource version: `1.0`

1.108.1.1. create

Usage:

```
am> create MessageNode --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
```

```
      "stateField" : {
        "title" : "Shared State Property Name",
        "description" : "",
        "propertyOrder" : 400,
        "type" : "string",
        "exampleValue" : ""
      },
      "messageNo" : {
        "title" : "Negative answer",
        "description" : "Localisation overrides - as key fill shortcut for language (first will be used
as default if not empty or \"No\" if empty), value is negative answer for language defined by key",
        "propertyOrder" : 300,
        "patternProperties" : {
          ".*" : {
            "type" : "string"
          }
        },
        "type" : "object",
        "exampleValue" : ""
      },
      "messageYes" : {
        "title" : "Positive answer",
        "description" : "Localisation overrides - as key fill shortcut for language (first will be used
as default if not empty or \"Yes\" if empty), value is positive answer for language defined by key",
        "propertyOrder" : 200,
        "patternProperties" : {
          ".*" : {
            "type" : "string"
          }
        },
        "type" : "object",
        "exampleValue" : ""
      },
      "message" : {
        "title" : "Message",
        "description" : "Localisation overrides - as key fill shortcut for language (first will be used
as default if not empty or \"Default message\" if empty), value is message for language defined by
key",
        "propertyOrder" : 100,
        "patternProperties" : {
          ".*" : {
            "type" : "string"
          }
        },
        "type" : "object",
        "exampleValue" : ""
      }
  },
  "required" : [ "message", "messageYes", "messageNo" ]
}
```

1.108.1.2. delete

Usage:

```
am> delete MessageNode --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.108.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action MessageNode --realm Realm --actionName getAllTypes
```

1.108.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action MessageNode --realm Realm --actionName getCreatableTypes
```

1.108.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action MessageNode --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.108.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action MessageNode --realm Realm --actionName nextdescendents
```

1.108.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query MessageNode --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.108.1.8. read

Usage:

```
am> read MessageNode --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.108.1.9. update

Usage:

```
am> update MessageNode --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "stateField" : {
      "title" : "Shared State Property Name",
      "description" : "",
      "propertyOrder" : 400,
      "type" : "string",
```

```
          "exampleValue" : ""
      },
      "messageNo" : {
        "title" : "Negative answer",
        "description" : "Localisation overrides - as key fill shortcut for language (first will be used
as default if not empty or \"No\" if empty), value is negative answer for language defined by key",
        "propertyOrder" : 300,
        "patternProperties" : {
          ".*" : {
            "type" : "string"
          }
        },
        "type" : "object",
        "exampleValue" : ""
      },
      "messageYes" : {
        "title" : "Positive answer",
        "description" : "Localisation overrides - as key fill shortcut for language (first will be used
as default if not empty or \"Yes\" if empty), value is positive answer for language defined by key",
        "propertyOrder" : 200,
        "patternProperties" : {
          ".*" : {
            "type" : "string"
          }
        },
        "type" : "object",
        "exampleValue" : ""
      },
      "message" : {
        "title" : "Message",
        "description" : "Localisation overrides - as key fill shortcut for language (first will be used
as default if not empty or \"Default message\" if empty), value is message for language defined by
key",
        "propertyOrder" : 100,
        "patternProperties" : {
          ".*" : {
            "type" : "string"
          }
        },
        "type" : "object",
        "exampleValue" : ""
      }
  },
  "required" : [ "message", "messageYes", "messageNo" ]
}
```

1.109. Meter

1.109.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/MeterNode`

Resource version: `1.0`

1.109.1.1. create

Usage:

```
am> create Meter --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "metricKey" : {
      "title" : "Metric Key",
      "description" : "Identifier of metric to update when this node is processed.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "metricKey" ]
}
```

1.109.1.2. delete

Usage:

```
am> delete Meter --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.109.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Meter --realm Realm --actionName getAllTypes
```

1.109.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Meter --realm Realm --actionName getCreatableTypes
```

1.109.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action Meter --realm Realm --body body --actionName listOutcomes
```

Parameters:

`--body`

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "title" : "Some configuration of the node. This does not need to be complete against the
>  configuration schema."
> }
> ```

1.109.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Meter --realm Realm --actionName nextdescendents
```

1.109.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Meter --realm Realm --filter filter
```

Parameters:

`--filter`

> A CREST formatted query filter, where "true" will query all.

1.109.1.8. read

Usage:

```
am> read Meter --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.109.1.9. update

Usage:

```
am> update Meter --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "metricKey" : {
      "title" : "Metric Key",
      "description" : "Identifier of metric to update when this node is processed.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "metricKey" ]
}
```

1.110. ModifyAuthLevel

1.110.1. Realm Operations

Resource path: /realm-config/authentication/authenticationtrees/nodes/ModifyAuthLevelNode

Resource version: 1.0

1.110.1.1. create

Usage:

```
am> create ModifyAuthLevel --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authLevelIncrement" : {
      "title" : "Value To Add",
      "description" : "Value which is added to the authentication level.Value may be negative to
 decrease the authentication level.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "authLevelIncrement" ]
}
```

1.110.1.2. delete

Usage:

```
am> delete ModifyAuthLevel --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.110.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ModifyAuthLevel --realm Realm --actionName getAllTypes
```

1.110.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ModifyAuthLevel --realm Realm --actionName getCreatableTypes
```

1.110.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action ModifyAuthLevel --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.110.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ModifyAuthLevel --realm Realm --actionName nextdescendents
```

1.110.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ModifyAuthLevel --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.110.1.8. read

Usage:

```
am> read ModifyAuthLevel --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.110.1.9. update

Usage:

```
am> update ModifyAuthLevel --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authLevelIncrement" : {
      "title" : "Value To Add",
      "description" : "Value which is added to the authentication level.Value may be negative to
 decrease the authentication level.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "authLevelIncrement" ]
}
```

1.111. Monitoring

1.111.1. Global Operations

Resource path: `/global-config/services/monitoring`

Resource version: `1.0`

1.111.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Monitoring --global --actionName getAllTypes
```

1.111.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Monitoring --global --actionName getCreatableTypes
```

1.111.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Monitoring --global --actionName nextdescendents
```

1.111.1.4. read

Usage:

```
am> read Monitoring --global
```

1.111.1.5. update

Usage:

```
am> update Monitoring --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "snmpEnabled" : {
      "title" : "Monitoring SNMP interface status",
      "description" : "Enable / Disable the SNMP access to the monitoring system",
      "propertyOrder" : 800,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "rmiPort" : {
      "title" : "Monitoring RMI Port",
      "description" : "Port number for the JMX monitoring interface",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "enabled" : {
      "title" : "Monitoring Status",
      "description" : "Enable / Disable the monitoring system",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "authfilePath" : {
      "title" : "Monitoring HTTP interface authentication file path",
      "description" : "Path to the monitoring system authentication file<br><br>The
<code>openam_mon_auth</code> file contains the username and password of the account used to
protect the monitoring interfaces. The default username is <code>demo</code> with a password of
<code>changeit</code>. Use the <code>ampassword</code> command to encrypt a new password.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "sessionHistoryWindowSize" : {
      "title" : "Session monitoring history size",
      "description" : "Size of the window of most recent session operations to record to expose via
monitoring system. Valid range is 100 - 1000000.",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "snmpPort" : {
      "title" : "Monitoring SNMP Port",
      "description" : "Port number for the SNMP monitoring interface",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
```

```
    "httpEnabled" : {
      "title" : "Monitoring HTTP interface status",

    }
  }
}
```

1.112. MsisdnModule

1.112.1. Realm Operations

Resource path: `/realm-config/authentication/modules/msisdn`

Resource version: `1.0`

1.112.1.1. create

Usage:

```
am> create MsisdnModule --realm Realm --id id --body body
```

Parameters:

`--id`

> The unique identifier for the resource.

`--body`

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "userProfileMsisdnAttribute" : {
      "title" : "Attribute To Use To Search LDAP",
      "description" : "The name of the attribute searched in the user profiles for the MSISDN number",
      "propertyOrder" : 500,

}
```

1.112.1.2. delete

Usage:

```
am> delete MsisdnModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.112.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action MsisdnModule --realm Realm --actionName getAllTypes
```

1.112.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action MsisdnModule --realm Realm --actionName getCreatableTypes
```

1.112.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action MsisdnModule --realm Realm --actionName nextdescendents
```

1.112.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query MsisdnModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.112.1.7. read

Usage:

```
am> read MsisdnModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.112.1.8. update

Usage:

```
am> update MsisdnModule --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "userProfileMsisdnAttribute" : {
      "title" : "Attribute To Use To Search LDAP",

```

1.112.2. Global Operations

Resource path: `/global-config/authentication/modules/msisdn`

Resource version: `1.0`

1.112.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action MsisdnModule --global --actionName getAllTypes
```

1.112.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action MsisdnModule --global --actionName getCreatableTypes
```

1.112.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action MsisdnModule --global --actionName nextdescendents
```

1.112.2.4. read

Usage:

```
am> read MsisdnModule --global
```

1.112.2.5. update

Usage:

```
am> update MsisdnModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {

1.113. MultiFederationProtocol

1.113.1. Global Operations

Resource path: `/global-config/services/federation/multi`

Resource version: `1.0`

1.113.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action MultiFederationProtocol --global --actionName getAllTypes
```

1.113.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action MultiFederationProtocol --global --actionName getCreatableTypes
```

1.113.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action MultiFederationProtocol --global --actionName nextdescendents
```

1.113.1.4. read

Usage:

```
am> read MultiFederationProtocol --global
```

1.113.1.5. update

Usage:

```
am> update MultiFederationProtocol --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "singleLogoutHandlerList" : {
      "title" : "Single Logout Handler List",
      "description" : "List of Logout handlers for each supported federation protocol<br><br>The
 multi-federation protocol engine supports Single Logout. Each federation protocol
 requires a different single logout handler. Logout handler must implement the
 <code>com.sun.identity.multiprotocol.SingleLogoutHandler</code> interface.",
      "propertyOrder" : 100,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.114. Naming

1.114.1. Global Operations

Resource path: `/global-config/services/naming`

Resource version: `1.0`

1.114.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Naming --global --actionName getAllTypes
```

1.114.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Naming --global --actionName getCreatableTypes
```

1.114.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Naming --global --actionName nextdescendents
```

1.114.1.4. read

Usage:

```
am> read Naming --global
```

1.114.1.5. update

Usage:

```
am> update Naming --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "endpointConfig" : {
      "type" : "object",

1.115. OAuth20

1.115.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/SocialNode`

Resource version: `1.0`

1.115.1.1. create

Usage:

```
am> create OAuth20 --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "clientId" : {
      "title" : "Client ID",
      "description" : "OAuth client_id parameter<p> For more information on the OAuth client_id
 parameter refer to the RFC 6749 (http://tools.ietf.org/html/rfc6749#section-2.3.1), section 2.3.1",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    },
    "authorizeEndpoint" : {
      "title" : "Authentication Endpoint URL",
```

```
      "description" : "OAuth authentication endpoint URL <p> This is the URL endpoint for OAuth
authentication provided by the OAuth Identity Provider",

```

1.115.1.2. delete

Usage:

```
am> delete OAuth20 --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.115.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OAuth20 --realm Realm --actionName getAllTypes
```

1.115.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OAuth20 --realm Realm --actionName getCreatableTypes
```

1.115.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action OAuth20 --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.115.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OAuth20 --realm Realm --actionName nextdescendents
```

1.115.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query OAuth20 --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.115.1.8. read

Usage:

```
am> read OAuth20 --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.115.1.9. update

Usage:

```
am> update OAuth20 --realm Realm --id id --body body
```

Parameters:

`--id`

> The unique identifier for the resource.

`--body`

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "clientId" : {
      "title" : "Client ID",

1.116. OAuth2ClientAgentGroups

1.116.1. Realm Operations

Agent Groups handler that is responsible for managing agent groups

Resource path: `/realm-config/agents/groups/OAuth2Client`

Resource version: `1.0`

1.116.1.1. create

Usage:

```
am> create OAuth2ClientAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "advancedOAuth2ClientConfig" : {

```

1.116.1.2. delete

Usage:

```
am> delete OAuth2ClientAgentGroups --realm Realm --id id
```

Parameters:

--id

 The unique identifier for the resource.

1.116.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OAuth2ClientAgentGroups --realm Realm --actionName getAllTypes
```

1.116.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OAuth2ClientAgentGroups --realm Realm --actionName getCreatableTypes
```

1.116.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OAuth2ClientAgentGroups --realm Realm --actionName nextdescendents
```

1.116.1.6. query

Querying the agent groups of a specific type

Usage:

```
am> query OAuth2ClientAgentGroups --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.116.1.7. read

Usage:

```
am> read OAuth2ClientAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.116.1.8. update

Usage:

```
am> update OAuth2ClientAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{

1.117. OAuth2Clients

1.117.1. Realm Operations

Agents handler that is responsible for managing agents

Resource path: `/realm-config/agents/OAuth2Client`

Resource version: `1.0`

1.117.1.1. create

Usage:

```
am> create OAuth2Clients --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{

```

1.117.1.2. delete

Usage:

```
am> delete OAuth2Clients --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.117.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OAuth2Clients --realm Realm --actionName getAllTypes
```

1.117.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OAuth2Clients --realm Realm --actionName getCreatableTypes
```

1.117.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OAuth2Clients --realm Realm --actionName nextdescendents
```

1.117.1.6. query

Querying the agents of a specific type

Usage:

```
am> query OAuth2Clients --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.117.1.7. read

Usage:

```
am> read OAuth2Clients --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.117.1.8. update

Usage:

```
am> update OAuth2Clients --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

1.118. OAuth2Module

1.118.1. Realm Operations

Resource path: `/realm-config/authentication/modules/oauth2`

Resource version: `1.0`

1.118.1.1. create

Usage:

```
am> create OAuth2Module --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

}
```

1.118.1.2. delete

Usage:

```
am> delete OAuth2Module --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.118.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OAuth2Module --realm Realm --actionName getAllTypes
```

1.118.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OAuth2Module --realm Realm --actionName getCreatableTypes
```

1.118.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OAuth2Module --realm Realm --actionName nextdescendents
```

1.118.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query OAuth2Module --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.118.1.7. read

Usage:

```
am> read OAuth2Module --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.118.1.8. update

Usage:

```
am> update OAuth2Module --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

1.118.2. Global Operations

Resource path: `/global-config/authentication/modules/oauth2`

Resource version: `1.0`

1.118.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OAuth2Module --global --actionName getAllTypes
```

1.118.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OAuth2Module --global --actionName getCreatableTypes
```

1.118.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OAuth2Module --global --actionName nextdescendents
```

1.118.2.4. read

Usage:

```
am> read OAuth2Module --global
```

1.118.2.5. update

Usage:

```
am> update OAuth2Module --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "mapToAnonymousUser" : {
          "title" : "Map to anonymous user",

1.119. OAuth2Provider

1.119.1. Realm Operations

Resource path: `/realm-config/services/oauth-oidc`

Resource version: `1.0`

1.119.1.1. create

Usage:

```
am> create OAuth2Provider --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{

```

1.119.1.2. delete

Usage:

```
am> delete OAuth2Provider --realm Realm
```

1.119.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OAuth2Provider --realm Realm --actionName getAllTypes
```

1.119.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OAuth2Provider --realm Realm --actionName getCreatableTypes
```

1.119.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OAuth2Provider --realm Realm --actionName nextdescendents
```

1.119.1.6. read

Usage:

```
am> read OAuth2Provider --realm Realm
```

1.119.1.7. update

Usage:

```
am> update OAuth2Provider --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "consent" : {

1.119.2. Global Operations

Resource path: `/global-config/services/oauth-oidc`

Resource version: `1.0`

1.119.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OAuth2Provider --global --actionName getAllTypes
```

1.119.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OAuth2Provider --global --actionName getCreatableTypes
```

1.119.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OAuth2Provider --global --actionName nextdescendents
```

1.119.2.4. read

Usage:

```
am> read OAuth2Provider --global
```

1.119.2.5. update

Usage:

```
am> update OAuth2Provider --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "blacklistPurgeDelay" : {

1.120. OAuth2RemoteConsentAgentGroups

1.120.1. Realm Operations

Agent Groups handler that is responsible for managing agent groups

Resource path: `/realm-config/agents/groups/RemoteConsentAgent`

Resource version: `1.0`

1.120.1.1. create

Usage:

```
am> create OAuth2RemoteConsentAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "remoteConsentRequestEncryptionMethod" : {
      "title" : "Consent request Encryption Method",
      "description" : "Encryption method to be used when encrypting the consent request JWT.",
      "propertyOrder" : 34300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "requestTimeLimit" : {
      "title" : "Consent Request Time Limit",
      "description" : "The amount of seconds for which the consent request JWT sent to the Remote
 Consent Service should be considered valid.",
      "propertyOrder" : 35200,
      "required" : false,
      "type" : "integer",
      "exampleValue" : ""
```

```
    },
    "remoteConsentRedirectUrl" : {
      "title" : "Redirect URL",
      "description" : "The Remote Consent Service's URL to which the authorization server should
redirect the user in order to obtain their consent.",
      "propertyOrder" : 34000,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "remoteConsentResponseEncryptionAlgorithm" : {
      "title" : "Consent response encryption algorithm",
      "description" : "The encryption algorithm to be used by the provider when decrypting the remote
consent response JWT received from the Remote Consent Service.",

      "description" : "The encryption method to be used by the provider when decrypting the remote
consent response JWT received from the Remote Consent Service.<br><br>AM supports the following token
encryption algorithms: <ul><li><code>A128GCM</code>, <code>A192GCM</code>, and <code>A256GCM</code> -
AES in Galois Counter Mode (GCM) authenticated encryption mode.</li><li><code>A128CBC-HS256</code>,
<code>A192CBC-HS384</code>, and <code>A256CBC-HS512</code> - AES encryption in CBC mode, with HMAC-
SHA-2 for integrity.</li></ul>",
      "propertyOrder" : 34600,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.120.1.2. delete

Usage:

```
am> delete OAuth2RemoteConsentAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.120.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OAuth2RemoteConsentAgentGroups --realm Realm --actionName getAllTypes
```

1.120.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OAuth2RemoteConsentAgentGroups --realm Realm --actionName getCreatableTypes
```

1.120.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OAuth2RemoteConsentAgentGroups --realm Realm --actionName nextdescendents
```

1.120.1.6. query

Querying the agent groups of a specific type

Usage:

```
am> query OAuth2RemoteConsentAgentGroups --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.120.1.7. read

Usage:

```
am> read OAuth2RemoteConsentAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.120.1.8. update

Usage:

```
am> update OAuth2RemoteConsentAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "remoteConsentRequestEncryptionMethod" : {
      "title" : "Consent request Encryption Method",

1.121. OAuth2SoftwarePublisherAgentGroups

1.121.1. Realm Operations

Agent Groups handler that is responsible for managing agent groups

Resource path: `/realm-config/agents/groups/SoftwarePublisher`

Resource version: `1.0`

1.121.1.1. create

Usage:

```
am> create OAuth2SoftwarePublisherAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jwkSet" : {
      "title" : "Json Web Key",
      "description" : "Raw JSON Web Key value containing the Software Publisher's public keys.",
      "propertyOrder" : 35100,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "jwksUri" : {
      "title" : "Json Web Key URI",
      "description" : "The URI that contains the Software Publisher's public keys in Json Web Key
format.",

      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.121.1.2. delete

Usage:

```
am> delete OAuth2SoftwarePublisherAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.121.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OAuth2SoftwarePublisherAgentGroups --realm Realm --actionName getAllTypes
```

1.121.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OAuth2SoftwarePublisherAgentGroups --realm Realm --actionName getCreatableTypes
```

1.121.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OAuth2SoftwarePublisherAgentGroups --realm Realm --actionName nextdescendents
```

1.121.1.6. query

Querying the agent groups of a specific type

Usage:

```
am> query OAuth2SoftwarePublisherAgentGroups --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.121.1.7. read

Usage:

```
am> read OAuth2SoftwarePublisherAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.121.1.8. update

Usage:

```
am> update OAuth2SoftwarePublisherAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```

Resource path: `/realm-config/agents/groups/TrustedJwtIssuer`

Resource version: `1.0`

1.122.1.1. create

Usage:

```
am> create OAuth2TrustedJWTIssuerAgentGroups --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jwkSet" : {
      "title" : "JWK Set",
      "description" : "Manually entered JWK Set of verification keys to validate the JWT signature.",
      "propertyOrder" : 30,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "jwksCacheTimeout" : {
```

```
      "title" : "JWKs URI content cache timeout in ms",
      "description" : "To avoid loading the JWKS URI content for every operation, the JWKS content is
cached. This timeout defines the maximum amount of time the JWKS URI content can be cached before
being refreshed.",
      "propertyOrder" : 70,
      "required" : false,
      "type" : "integer",
      "exampleValue" : ""
    },
    "jwksUri" : {
      "title" : "JWKs URI",
      "description" : "URI to retrieve JWK verification keys from to validate the JWT signature.",
      "propertyOrder" : 20,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "allowedSubjects" : {
      "title" : "Allowed Subjects",
      "description" : "List of subjects which this provider is allowed to provide consent for. If
blank then the provider can provide consent for any user in this realm.",
      "propertyOrder" : 60,
      "required" : false,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "issuer" : {
      "title" : "JWT Issuer",
      "description" : "Expected 'iss' claim identifier for this JWT issuer.",
      "propertyOrder" : 10,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "resourceOwnerIdentityClaim" : {
      "title" : "Resource Owner Identity Claim",
      "description" : "Claim in the JWT that identifies the resource owner account in AM. Defaults to
\"sub\".",
      "propertyOrder" : 50,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "jwkStoreCacheMissCacheTime" : {
      "title" : "JWKs URI content cache miss cache time",
      "description" : "To avoid loading the JWKS URI content for every operation, especially when
the kid is not in the jwks content already cached, the JWKS content will be cached for a minimum
period of time. This cache miss cache time defines the minimum amount of time the JWKS URI content is
cached.",
      "propertyOrder" : 80,
      "required" : false,
      "type" : "integer",
      "exampleValue" : ""
    },
    "consentedScopesClaim" : {
      "title" : "Consented Scopes Claim",
```

```
      "description" : "Optional claim within the JWT that lists the scopes that the user has consented
   to. The scopes can be represented either as a JSON array of strings, or as a single space-separated
   string.",
      "propertyOrder" : 40,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.122.1.2. delete

Usage:

```
am> delete OAuth2TrustedJWTIssuerAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.122.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OAuth2TrustedJWTIssuerAgentGroups --realm Realm --actionName getAllTypes
```

1.122.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OAuth2TrustedJWTIssuerAgentGroups --realm Realm --actionName getCreatableTypes
```

1.122.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OAuth2TrustedJWTIssuerAgentGroups --realm Realm --actionName nextdescendents
```

1.122.1.6. query

Querying the agent groups of a specific type

Usage:

```
am> query OAuth2TrustedJWTIssuerAgentGroups --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.122.1.7. read

Usage:

```
am> read OAuth2TrustedJWTIssuerAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.122.1.8. update

Usage:

```
am> update OAuth2TrustedJWTIssuerAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jwkSet" : {
      "title" : "JWK Set",
      "description" : "Manually entered JWK Set of verification keys to validate the JWT signature.",
      "propertyOrder" : 30,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "jwksCacheTimeout" : {
      "title" : "JWKs URI content cache timeout in ms",
      "description" : "To avoid loading the JWKS URI content for every operation, the JWKS content is
 cached. This timeout defines the maximum amount of time the JWKS URI content can be cached before
 being refreshed.",
```

```
      "propertyOrder" : 70,
      "required" : false,
      "type" : "integer",
      "exampleValue" : ""
    },
    "jwksUri" : {
      "title" : "JWKs URI",
      "description" : "URI to retrieve JWK verification keys from to validate the JWT signature.",
      "propertyOrder" : 20,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "allowedSubjects" : {
      "title" : "Allowed Subjects",
      "description" : "List of subjects which this provider is allowed to provide consent for. If
blank then the provider can provide consent for any user in this realm.",
      "propertyOrder" : 60,
      "required" : false,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "issuer" : {
      "title" : "JWT Issuer",
      "description" : "Expected 'iss' claim identifier for this JWT issuer.",
      "propertyOrder" : 10,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "resourceOwnerIdentityClaim" : {
      "title" : "Resource Owner Identity Claim",
      "description" : "Claim in the JWT that identifies the resource owner account in AM. Defaults to
\"sub\".",
      "propertyOrder" : 50,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    },
    "jwkStoreCacheMissCacheTime" : {
      "title" : "JWKs URI content cache miss cache time",
      "description" : "To avoid loading the JWKS URI content for every operation, especially when
the kid is not in the jwks content already cached, the JWKS content will be cached for a minimum
period of time. This cache miss cache time defines the minimum amount of time the JWKS URI content is
cached.",
      "propertyOrder" : 80,
      "required" : false,
      "type" : "integer",
      "exampleValue" : ""
    },
    "consentedScopesClaim" : {
      "title" : "Consented Scopes Claim",
      "description" : "Optional claim within the JWT that lists the scopes that the user has consented
to. The scopes can be represented either as a JSON array of strings, or as a single space-separated
string.",
      "propertyOrder" : 40,
```

```
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.123. OAuth2UserApplications

1.123.1. Realm Operations

This endpoint exposes a list of all the applications (clients) that the user authorized using OAuth 2.0. Access for those applications can then be revoked on a per-client basis.

Resource path: `/users/{user}/oauth2/applications`

Resource version: `1.1`

1.123.1.1. delete

Delete the tokens for the specified client ID.

Usage:

```
am> delete OAuth2UserApplications --realm Realm --id id --user user
```

Parameters:

`--id`

The unique identifier for the resource.

`--user`

This endpoint exposes a list of all the applications (clients) that the user authorized using OAuth 2.0. Access for those applications can then be revoked on a per-client basis.

1.123.1.2. query

Get a list of the applications that have been granted OAuth 2.0 access. Only `` `_queryFilter=true` `` is supported.

Usage:

```
am> query OAuth2UserApplications --realm Realm --filter filter --user user
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

--user

This endpoint exposes a list of all the applications (clients) that the user authorized using OAuth 2.0. Access for those applications can then be revoked on a per-client basis.

1.124. OTPCollectorDecision

1.124.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/OneTimePasswordCollectorDecisionNode`

Resource version: `1.0`

1.124.1.1. create

Usage:

```
am> create OTPCollectorDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "passwordExpiryTime" : {
      "title" : "One Time Password Validity Length",
      "description" : "This One Time Password will remain valid for this period in minutes.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "passwordExpiryTime" ]
}
```

1.124.1.2. delete

Usage:

```
am> delete OTPCollectorDecision --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.124.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OTPCollectorDecision --realm Realm --actionName getAllTypes
```

1.124.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OTPCollectorDecision --realm Realm --actionName getCreatableTypes
```

1.124.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action OTPCollectorDecision --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.124.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OTPCollectorDecision --realm Realm --actionName nextdescendents
```

1.124.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query OTPCollectorDecision --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.124.1.8. read

Usage:

```
am> read OTPCollectorDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.124.1.9. update

Usage:

```
am> update OTPCollectorDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "passwordExpiryTime" : {
      "title" : "One Time Password Validity Length",
      "description" : "This One Time Password will remain valid for this period in minutes.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "passwordExpiryTime" ]
}
```

1.125. OTPEmailSender

1.125.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/OneTimePasswordSmtpSenderNode`

Resource version: `1.0`

1.125.1.1. create

Usage:

```
am> create OTPEmailSender --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "password" : {
      "title" : "Mail Server Authentication Password",
      "description" : "The password to use when the mail server is using SMTP authentication",
      "propertyOrder" : 500,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "username" : {
      "title" : "Mail Server Authentication Username",
```

```
      "description" : "The username to use when the mail server is using SMTP authentication",
      "propertyOrder" : 400,
      "type" : "string",
      "exampleValue" : ""
    },
    "hostPort" : {
      "title" : "Mail Server Host Port",
      "description" : "The port of the mail server. The default port for SMTP is 25, if using SSL the
default port is 465.",
      "propertyOrder" : 300,
      "type" : "integer",
      "exampleValue" : ""
    },
    "smsGatewayImplementationClass" : {
      "title" : "Gateway Implementation Class",
      "description" : "The OTP Email Sender node uses this class to send email
messages. <br><br>The gateway class must implement the following interface:
<br><code>com.sun.identity.authentication.modules.hotp.SMSGateway</code>",
      "propertyOrder" : 2200,
      "type" : "string",
      "exampleValue" : ""
    },
    "hostName" : {
      "title" : "Mail Server Host Name",
      "description" : "The name of the mail server OpenAM will use to send the messages.",
      "propertyOrder" : 200,
      "type" : "string",
      "exampleValue" : ""
    },
    "sslOption" : {
      "title" : "Mail Server Secure Connection",
      "description" : "This setting controls whether the authentication module communicates with the
mail server using SSL/TLS.",
      "propertyOrder" : 2100,
      "type" : "string",
      "exampleValue" : ""
    },
    "emailAttribute" : {
      "title" : "Email Attribute Name",
      "description" : "This is the attribute name used by the OTP Sender to email the user",
      "propertyOrder" : 1100,
      "type" : "string",
      "exampleValue" : ""
    },
    "fromEmailAddress" : {
      "title" : "Email From Address",
      "description" : "Emails from the OTP Email Sender node will come from this address.",
      "propertyOrder" : 600,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "hostName", "fromEmailAddress", "hostPort", "emailAttribute",
"smsGatewayImplementationClass", "username", "sslOption" ]
}
```

1.125.1.2. delete

Usage:

```
am> delete OTPEmailSender --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.125.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OTPEmailSender --realm Realm --actionName getAllTypes
```

1.125.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OTPEmailSender --realm Realm --actionName getCreatableTypes
```

1.125.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action OTPEmailSender --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.125.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OTPEmailSender --realm Realm --actionName nextdescendents
```

1.125.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query OTPEmailSender --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.125.1.8. read

Usage:

```
am> read OTPEmailSender --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.125.1.9. update

Usage:

```
am> update OTPEmailSender --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "password" : {
      "title" : "Mail Server Authentication Password",
      "description" : "The password to use when the mail server is using SMTP authentication",
      "propertyOrder" : 500,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "username" : {
      "title" : "Mail Server Authentication Username",
      "description" : "The username to use when the mail server is using SMTP authentication",
      "propertyOrder" : 400,
      "type" : "string",
      "exampleValue" : ""
    },
    "hostPort" : {
      "title" : "Mail Server Host Port",
      "description" : "The port of the mail server. The default port for SMTP is 25, if using SSL the
default port is 465.",
      "propertyOrder" : 300,
      "type" : "integer",
      "exampleValue" : ""
    },
    "smsGatewayImplementationClass" : {
      "title" : "Gateway Implementation Class",

      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "hostName", "fromEmailAddress", "hostPort", "emailAttribute",
 "smsGatewayImplementationClass", "username", "sslOption" ]
}
```

1.126. OTPSMSSender

1.126.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/OneTimePasswordSmsSenderNode`

Resource version: `1.0`

1.126.1.1. create

Usage:

```
am> create OTPSMSSender --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "sslOption" : {
      "title" : "Mail Server Secure Connection",

    }
```

```
  },
  "required" : [ "hostName", "username", "hostPort", "smsGatewayImplementationClass",
  "mobilePhoneAttributeName", "fromEmailAddress", "sslOption" ]
}
```

1.126.1.2. delete

Usage:

```
am> delete OTPSMSSender --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.126.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OTPSMSSender --realm Realm --actionName getAllTypes
```

1.126.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OTPSMSSender --realm Realm --actionName getCreatableTypes
```

1.126.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action OTPSMSSender --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.126.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OTPSMSSender --realm Realm --actionName nextdescendents
```

1.126.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query OTPSMSSender --realm Realm --filter filter
```

Parameters:

--filter

   A CREST formatted query filter, where "true" will query all.

1.126.1.8. read

Usage:

```
am> read OTPSMSSender --realm Realm --id id
```

Parameters:

--id

   The unique identifier for the resource.

1.126.1.9. update

Usage:

```
am> update OTPSMSSender --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "sslOption" : {
      "title" : "Mail Server Secure Connection",
      "description" : "This setting controls whether the authentication module communicates with the
 mail server using SSL/TLS.",

```

1.127.1.2. delete

Usage:

```
am> delete OathModule --realm Realm --id id
```

Parameters:

`--id`

    The unique identifier for the resource.

1.127.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OathModule --realm Realm --actionName getAllTypes
```

1.127.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OathModule --realm Realm --actionName getCreatableTypes
```

1.127.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OathModule --realm Realm --actionName nextdescendents
```

1.127.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query OathModule --realm Realm --filter filter
```

Parameters:

`--filter`

    A CREST formatted query filter, where "true" will query all.

1.127.1.7. read

Usage:

```
am> read OathModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.127.1.8. update

Usage:

```
am> update OathModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {

1.127.2. Global Operations

Resource path: `/global-config/authentication/modules/oath`

Resource version: `1.0`

1.127.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OathModule --global --actionName getAllTypes
```

1.127.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OathModule --global --actionName getCreatableTypes
```

1.127.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OathModule --global --actionName nextdescendents
```

1.127.2.4. read

Usage:

```
am> read OathModule --global
```

1.127.2.5. update

Usage:

```
am> update OathModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "addChecksum" : {

1.128. OathUserDevices

1.128.1. Realm Operations

The Oath devices service is responsible for exposing functions to change the collection of OATH authentication devices. The supported methods are action, delete, query

Resource path: `/users/{user}/devices/2fa/oath`

Resource version: `1.0`

1.128.1.1. check

Checks if the user's Authenticator OATH module is 'skippable' and returns the result as a boolean

Usage:

```
am> action OathUserDevices --realm Realm --body body --user user --actionName check
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "OATH user device check action request schema",
  "type" : "object",
  "title" : "OATH user device check action request schema"
}
```

`--user`

The Oath devices service is responsible for exposing functions to change the collection of OATH authentication devices. The supported methods are action, delete, query

1.128.1.2. delete

Delete OATH user device

Usage:

```
am> delete OathUserDevices --realm Realm --id id --user user
```

Parameters:

--id

The unique identifier for the resource.

--user

The Oath devices service is responsible for exposing functions to change the collection of OATH authentication devices. The supported methods are action, delete, query

1.128.1.3. query

Query the user's device profile

Usage:

```
am> query OathUserDevices --realm Realm --filter filter --user user
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

--user

The Oath devices service is responsible for exposing functions to change the collection of OATH authentication devices. The supported methods are action, delete, query

1.128.1.4. reset

Sets the user's 'skippable' selection of Authenticator OATH module to default (NOT_SET) and deletes their profiles attribute

Usage:

```
am> action OathUserDevices --realm Realm --body body --user user --actionName reset
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "OATH user device reset action request schema",
  "type" : "object",
  "title" : "OATH user device reset action request schema"
}
```

--user

> The Oath devices service is responsible for exposing functions to change the collection of OATH authentication devices. The supported methods are action, delete, query

1.128.1.5. skip

Sets the user's ability to skip an Authenticator OATH module

Usage:

```
am> action OathUserDevices --realm Realm --body body --user user --actionName skip
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "OATH user device skip action request schema",
  "type" : "object",
  "title" : "OATH user device skip action request schema",
  "properties" : {
    "value" : {
      "type" : "boolean",
      "title" : "Skip OATH module response value",
      "description" : "True if the OATH device is set to skipped"
    }
  },
  "required" : [ "value" ]
}
```

--user

> The Oath devices service is responsible for exposing functions to change the collection of OATH authentication devices. The supported methods are action, delete, query

1.129. OpenDJ

1.129.1. Realm Operations

Resource path: `/realm-config/services/id-repositories/LDAPv3ForOpenDS`

Resource version: `1.0`

1.129.1.1. create

Usage:

```
am> create OpenDJ --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```

```

1.129.1.2. delete

Usage:

```
am> delete OpenDJ --realm Realm --id id
```

Parameters:

`--id`

> The unique identifier for the resource.

1.129.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OpenDJ --realm Realm --actionName getAllTypes
```

1.129.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OpenDJ --realm Realm --actionName getCreatableTypes
```

1.129.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OpenDJ --realm Realm --actionName nextdescendents
```

1.129.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query OpenDJ --realm Realm --filter filter
```

Parameters:

`--filter`

> A CREST formatted query filter, where "true" will query all.

1.129.1.7. read

Usage:

```
am> read OpenDJ --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.129.1.8. update

Usage:

```
am> update OpenDJ --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```

1.130. OpenIDConnect

1.130.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/SocialOpenIdConnectNode`

Resource version: `1.0`

1.130.1.1. create

Usage:

```
am> create OpenIDConnect --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "issuer" : {
      "title" : "Token Issuer",

}
```

1.130.1.2. delete

Usage:

```
am> delete OpenIDConnect --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.130.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OpenIDConnect --realm Realm --actionName getAllTypes
```

1.130.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OpenIDConnect --realm Realm --actionName getCreatableTypes
```

1.130.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action OpenIDConnect --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.130.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OpenIDConnect --realm Realm --actionName nextdescendents
```

1.130.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query OpenIDConnect --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.130.1.8. read

Usage:

```
am> read OpenIDConnect --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.130.1.9. update

Usage:

```
am> update OpenIDConnect --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "issuer" : {

```

1.131.1.2. delete

Usage:

```
am> delete OpenIdConnectModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.131.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OpenIdConnectModule --realm Realm --actionName getAllTypes
```

1.131.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OpenIdConnectModule --realm Realm --actionName getCreatableTypes
```

1.131.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OpenIdConnectModule --realm Realm --actionName nextdescendents
```

1.131.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query OpenIdConnectModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.131.1.7. read

Usage:

```
am> read OpenIdConnectModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.131.1.8. update

Usage:

```
am> update OpenIdConnectModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "accountProviderClass" : {
      "title" : "Account provider class",

1.131.2. Global Operations

Resource path: `/global-config/authentication/modules/openidconnect`

Resource version: `1.0`

1.131.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action OpenIdConnectModule --global --actionName getAllTypes
```

1.131.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action OpenIdConnectModule --global --actionName getCreatableTypes
```

1.131.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action OpenIdConnectModule --global --actionName nextdescendents
```

1.131.2.4. read

Usage:

```
am> read OpenIdConnectModule --global
```

1.131.2.5. update

Usage:

```
am> update OpenIdConnectModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "cryptoContextValue" : {
          "title" : "OpenID Connect validation configuration value",
          "description" : "The discovery url, or jwk url, or the client_secret, corresponding to the
selection above.<br><br>If discovery or jwk url entered, entry must be in valid url format, <br/>e.g.
https://accounts.google.com/.well-known/openid-configuration<br/><i>NB </i>If client_secret entered,
entry is ignored and the value of the Client Secret is used.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "useSubClaimIfNoMatch" : {
          "title" : "Use \"sub\" claim if no match",
          "description" : "If no account is found that matches, whether to use the \"sub\" claim as
the principal name or (if false) to fail.",
          "propertyOrder" : 1000,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        },
        "idTokenHeaderName" : {

1.132. PageNode

1.132.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/PageNode`

Resource version: `1.0`

1.132.1.1. create

Usage:

```
am> create PageNode --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Authentication tree Page Node",
  "type" : "object",
  "title" : "Page Node",
  "properties" : {
    "nodes" : {
```

```
          "type" : "array",
          "title" : "Page Nodes",
          "description" : "The child nodes, in the order they are returned to the authentication client",
          "items" : {
            "type" : "object",
            "title" : "Child Node",
            "description" : "A node that is used in the page",
            "properties" : {
              "id" : {
                "type" : "string",
                "title" : "Node ID",
                "description" : "ID of the child node"
              },
              "displayName" : {
                "type" : "string",
                "title" : "Display name",
                "description" : "The display name of the child node"
              },
              "nodeType" : {
                "type" : "string",
                "title" : "Node type",
                "description" : "The type of the child node"
              }
            }
          }
        }
      }
    },
    "required" : [ "nodes" ]
}
```

1.132.1.2. delete

Usage:

```
am> delete PageNode --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.132.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PageNode --realm Realm --actionName getAllTypes
```

1.132.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PageNode --realm Realm --actionName getCreatableTypes
```

1.132.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action PageNode --realm Realm --body body --actionName listOutcomes
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.132.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PageNode --realm Realm --actionName nextdescendents
```

1.132.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query PageNode --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.132.1.8. read

Usage:

```
am> read PageNode --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.132.1.9. update

Usage:

```
am> update PageNode --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Authentication tree Page Node",
  "type" : "object",
  "title" : "Page Node",
  "properties" : {
    "nodes" : {
      "type" : "array",
      "title" : "Page Nodes",
      "description" : "The child nodes, in the order they are returned to the authentication client",
      "items" : {
        "type" : "object",
        "title" : "Child Node",
        "description" : "A node that is used in the page",
        "properties" : {
          "id" : {
            "type" : "string",
            "title" : "Node ID",
            "description" : "ID of the child node"
          },
          "displayName" : {
            "type" : "string",
            "title" : "Display name",
            "description" : "The display name of the child node"
          },
          "nodeType" : {
            "type" : "string",
            "title" : "Node type",
            "description" : "The type of the child node"
          }
```

```
      }
     }
    }
   },
   "required" : [ "nodes" ]
}
```

1.133. PasswordCollector

1.133.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/PasswordCollectorNode`

Resource version: `1.0`

1.133.1.1. create

Usage:

```
am> create PasswordCollector --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "required" : [ ]
> }
> ```

1.133.1.2. delete

Usage:

```
am> delete PasswordCollector --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.133.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PasswordCollector --realm Realm --actionName getAllTypes
```

1.133.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PasswordCollector --realm Realm --actionName getCreatableTypes
```

1.133.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action PasswordCollector --realm Realm --body body --actionName listOutcomes
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.133.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PasswordCollector --realm Realm --actionName nextdescendents
```

1.133.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query PasswordCollector --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.133.1.8. read

Usage:

```
am> read PasswordCollector --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.133.1.9. update

Usage:

```
am> update PasswordCollector --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.134. PendingUmaRequests

1.134.1. Realm Operations

Pending UMA requests provider is responsible for allowing, denying and querying the guest requests for user resources. Available actions are Query, Read, Deny (all requests or one request), Approve (all requests or one request)

Resource path: `/users/{user}/uma/pendingrequests`

Resource version: `1.0`

1.134.1.1. approve

Approve the pending request and grant access to the requesting user.

Usage:

```
am> action PendingUmaRequests --realm Realm --id id --body body --user user --actionName approve
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Approve action request schema.",
  "type" : "object",
  "title" : "Approve action request schema",
  "properties" : {
    "scopes" : {
      "type" : "array",
      "title" : "Approve request scopes",
      "description" : "The list of the scopes the requesting user gets access to.",
      "items" : {
        "type" : "string"
      }
    }
  },
  "required" : [ "scopes" ]
}
```

--user

Pending UMA requests provider is responsible for allowing, denying and querying the guest requests for user resources. Available actions are Query, Read, Deny (all requests or one request), Approve (all requests or one request)

1.134.1.2. approveAll

Approve every pending requests and grant access to the requesting user.

Usage:

```
am> action PendingUmaRequests --realm Realm --body body --user user --actionName approveAll
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Approve action request schema.",
  "type" : "object",
  "title" : "Approve action request schema",
  "properties" : {
    "scopes" : {
      "type" : "array",
      "title" : "Approve request scopes",
      "description" : "The list of the scopes the requesting user gets access to.",
      "items" : {
        "type" : "string"
      }
    }
  },
  "required" : [ "scopes" ]
}
```

--user

Pending UMA requests provider is responsible for allowing, denying and querying the guest requests for user resources. Available actions are Query, Read, Deny (all requests or one request), Approve (all requests or one request)

1.134.1.3. query

Query the collection of pending requests.

Usage:

```
am> query PendingUmaRequests --realm Realm --filter filter --user user
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

--user

Pending UMA requests provider is responsible for allowing, denying and querying the guest requests for user resources. Available actions are Query, Read, Deny (all requests or one request), Approve (all requests or one request)

1.134.1.4. read

Read pending request

Usage:

```
am> read PendingUmaRequests --realm Realm --id id --user user
```

Parameters:

--id

The unique identifier for the resource.

--user

Pending UMA requests provider is responsible for allowing, denying and querying the guest requests for user resources. Available actions are Query, Read, Deny (all requests or one request), Approve (all requests or one request)

1.135. PersistentCookieDecision

1.135.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/PersistentCookieDecisionNode`

Resource version: `1.0`

1.135.1.1. create

Usage:

```
am> create PersistentCookieDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "hmacSigningKey" : {
      "title" : "HMAC Signing Key",
      "description" : "Base64-encoded 256-bit key to use for HMAC signing of the cookie.",
      "propertyOrder" : 500,
      "type" : "string",
      "format" : "password",
```

```
          "exampleValue" : ""
        },
        "idleTimeout" : {
          "title" : "Idle Timeout",
          "description" : "The maximum idle time between requests before the cookie is invalidated, in
    hours.",
          "propertyOrder" : 100,
          "type" : "integer",
          "exampleValue" : ""
        },
        "useHttpOnlyCookie" : {
          "title" : "Use HTTP Only Cookie",
          "description" : "Sets the persistent cookie as \"HttpOnly\".",
          "propertyOrder" : 400,
          "type" : "boolean",
          "exampleValue" : ""
        },
        "enforceClientIp" : {
          "title" : "Enforce Client IP",
          "description" : "Enforces that the persistent cookie can only be used from the same client IP to
    which the cookie was issued.",
          "propertyOrder" : 200,
          "type" : "boolean",

          "type" : "string",
          "exampleValue" : ""
        }
      },
      "required" : [ "hmacSigningKey", "useSecureCookie", "enforceClientIp", "persistentCookieName",
    "idleTimeout", "useHttpOnlyCookie" ]
    }
```

1.135.1.2. delete

Usage:

```
am> delete PersistentCookieDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.135.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PersistentCookieDecision --realm Realm --actionName getAllTypes
```

1.135.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PersistentCookieDecision --realm Realm --actionName getCreatableTypes
```

1.135.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action PersistentCookieDecision --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.135.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PersistentCookieDecision --realm Realm --actionName nextdescendents
```

1.135.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query PersistentCookieDecision --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.135.1.8. read

Usage:

```
am> read PersistentCookieDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.135.1.9. update

Usage:

```
am> update PersistentCookieDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "hmacSigningKey" : {
      "title" : "HMAC Signing Key",
      "description" : "Base64-encoded 256-bit key to use for HMAC signing of the cookie.",
      "propertyOrder" : 500,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "idleTimeout" : {
      "title" : "Idle Timeout",
      "description" : "The maximum idle time between requests before the cookie is invalidated, in
hours.",
      "propertyOrder" : 100,
```

```
      "type" : "integer",
      "exampleValue" : ""
    },
    "useHttpOnlyCookie" : {
      "title" : "Use HTTP Only Cookie",
      "description" : "Sets the persistent cookie as \"HttpOnly\".",
      "propertyOrder" : 400,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "enforceClientIp" : {
      "title" : "Enforce Client IP",
      "description" : "Enforces that the persistent cookie can only be used from the same client IP to
  which the cookie was issued.",
      "propertyOrder" : 200,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "useSecureCookie" : {
      "title" : "Use Secure Cookie",
      "description" : "Sets the persistent cookie as \"Secure\".",
      "propertyOrder" : 300,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "persistentCookieName" : {
      "title" : "Persistent Cookie Name",
      "description" : "The name of the persistent cookie.",
      "propertyOrder" : 600,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "hmacSigningKey", "useSecureCookie", "enforceClientIp", "persistentCookieName",
 "idleTimeout", "useHttpOnlyCookie" ]
}
```

1.136. PersistentCookieModule

1.136.1. Realm Operations

Resource path: `/realm-config/authentication/modules/persistentcookie`

Resource version: `1.0`

1.136.1.1. create

Usage:

```
am> create PersistentCookieModule --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "useSecureCookie" : {
      "title" : "Use secure cookie",
      "description" : "Sets the persistent cookie as \"Secure\"",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "useHttpOnlyCookie" : {
      "title" : "Use HTTP only cookie",
      "description" : "Sets the persistent cookie as \"HttpOnly\"",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "cookieName" : {
      "title" : "Persistent Cookie Name",
      "description" : "Sets the name of the persistent cookie",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "maxLife" : {
      "title" : "Max Life",
      "description" : "The maximum length of time the persistent cookie is valid for, in hours.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "enforceClientIP" : {
      "title" : "Enforce Client IP",
      "description" : "Enforces that the persistent cookie can only be used from the same client IP to
which the cookie was issued.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "idleTimeout" : {
      "title" : "Idle Timeout",
      "description" : "The maximum idle time between requests before the cookie is invalidated, in
hours.",
```

```
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.136.1.2. delete

Usage:

```
am> delete PersistentCookieModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.136.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PersistentCookieModule --realm Realm --actionName getAllTypes
```

1.136.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PersistentCookieModule --realm Realm --actionName getCreatableTypes
```

1.136.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PersistentCookieModule --realm Realm --actionName nextdescendents
```

1.136.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query PersistentCookieModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.136.1.7. read

Usage:

```
am> read PersistentCookieModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.136.1.8. update

Usage:

```
am> update PersistentCookieModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "useSecureCookie" : {
      "title" : "Use secure cookie",
      "description" : "Sets the persistent cookie as \"Secure\"",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "useHttpOnlyCookie" : {
      "title" : "Use HTTP only cookie",
```

```
      "description" : "Sets the persistent cookie as \"HttpOnly\"",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "cookieName" : {
      "title" : "Persistent Cookie Name",
      "description" : "Sets the name of the persistent cookie",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "maxLife" : {
      "title" : "Max Life",
      "description" : "The maximum length of time the persistent cookie is valid for, in hours.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "enforceClientIP" : {
      "title" : "Enforce Client IP",
      "description" : "Enforces that the persistent cookie can only be used from the same client IP to
which the cookie was issued.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "idleTimeout" : {
      "title" : "Idle Timeout",
      "description" : "The maximum idle time between requests before the cookie is invalidated, in
hours.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.136.2. Global Operations

Resource path: `/global-config/authentication/modules/persistentcookie`

Resource version: `1.0`

1.136.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PersistentCookieModule --global --actionName getAllTypes
```

1.136.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PersistentCookieModule --global --actionName getCreatableTypes
```

1.136.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PersistentCookieModule --global --actionName nextdescendents
```

1.136.2.4. read

Usage:

```
am> read PersistentCookieModule --global
```

1.136.2.5. update

Usage:

```
am> update PersistentCookieModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "useSecureCookie" : {
          "title" : "Use secure cookie",
          "description" : "Sets the persistent cookie as \"Secure\"",
          "propertyOrder" : 400,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        },
        "maxLife" : {
```

```
          "title" : "Max Life",
          "description" : "The maximum length of time the persistent cookie is valid for, in hours.",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "idleTimeout" : {
          "title" : "Idle Timeout",
          "description" : "The maximum idle time between requests before the cookie is invalidated, in
hours.",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "cookieName" : {
          "title" : "Persistent Cookie Name",
          "description" : "Sets the name of the persistent cookie",
          "propertyOrder" : null,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "useHttpOnlyCookie" : {
          "title" : "Use HTTP only cookie",
          "description" : "Sets the persistent cookie as \"HttpOnly\"",
          "propertyOrder" : 500,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        },
        "enforceClientIP" : {
          "title" : "Enforce Client IP",
          "description" : "Enforces that the persistent cookie can only be used from the same client
IP to which the cookie was issued.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.137. Platform

1.137.1. Global Operations

Resource path: `/global-config/services/platform`

Resource version: `1.0`

1.137.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Platform --global --actionName getAllTypes
```

1.137.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Platform --global --actionName getCreatableTypes
```

1.137.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Platform --global --actionName nextdescendents
```

1.137.1.4. read

Usage:

```
am> read Platform --global
```

1.137.1.5. update

Usage:

```
am> update Platform --global --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "locale" : {
      "title" : "Platform Locale",
      "description" : "Set the fallback locale used when the user locale cannot be determined.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "cookieDomains" : {
      "title" : "Cookie Domains",
      "description" : "Set the list of domains into which OpenAM writes cookies.<br><br>If you set
 multiple cookie domains, OpenAM still only sets the cookie in the domain the client uses to access
 OpenAM. If this property is left blank, then the fully qualified domain name of the server is used to
 set the cookie domain, meaning that a host cookie rather than a domain cookie is set.",
      "propertyOrder" : 200,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.138. Policies

1.138.1. Realm Operations

The Policy resource with copy and move support endpoint is responsible for managing policies. It supports all the operations that previous version of Policy resource endpoint supports - create, read, update, delete, query, evalute and evaluateTree action - with two new actions move and copy for copying and moving policies between realms

Resource path: `/policies`

Resource version: `2.1`

1.138.1.1. copy

Copy a list of policies

Usage:

```
am> action Policies --realm Realm --body body --actionName copy
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Policy copy action schema",
  "type" : "object",
  "title" : "Policy copy action schema",
  "properties" : {
    "from" : {
      "title" : "Copy/move from",
      "description" : "Policy copy/move origin parameters",
      "type" : "object",
      "properties" : {
        "application" : {
          "title" : "Application",
          "description" : "The policy set in which the input policies are located",
          "type" : "string"
        }
      },
      "required" : [ "application" ]
    },
    "to" : {
      "type" : "object",
      "title" : "Copy/Move To",
      "description" : "Policy copy/move destination parameters",
      "properties" : {
        "application" : {
          "title" : "Application",
          "description" : "The policy set in which to place the output policy. Required when copying
or moving a policy to a different policy set.",
          "type" : "string"
        },
        "realm" : {
          "title" : "Realm",
          "description" : "The realm in which to place the output policy. If not specified, OpenAM
copies or moves the policy within the realm identified in the URL. Required when copying or moving a
policy to a different realm.",
          "type" : "string"
        },
        "namePostfix" : {
          "title" : "Name postfix",
          "description" : "A value appended to output policy names in order to prevent name clashes",
          "type" : "string"
        }
      },
      "required" : [ "namePostfix" ]
    },
    "resourceTypeMapping" : {
      "title" : "Resource type mapping",
      "description" : "One or more resource types mappings, where the left side of the mapping
specifies the UUID of a resource type used by the input policies and the right side of the mapping
specifies the UUID of a resource type used by the output policies. The two resource types should have
the same resource patterns",
      "type" : "object",
      "additionalProperties" : {
        "type" : "string"
      }
```

```
    }
  },
  "required" : [ "from", "to" ]
}
```

1.138.1.2. create

Create new policy

Usage:

```
am> create Policies --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Json schema for the policy resource",
  "title" : "Policy Resource Schema",
  "type" : "object",
  "properties" : {
    "name" : {
      "title" : "Name",
      "description" : "String matching the name of the application",
      "type" : "string"
    },
    "active" : {
      "title" : "Active flag",
      "description" : "Boolean indicating whether OpenAM considers the policy active for evaluation
purposes, defaults to false",
      "type" : "boolean"
    },
    "description" : {
      "title" : "Description",
      "description" : "String describing the policy",
      "type" : "string"
    },
    "applicationName" : {
      "title" : "Application name",
      "description" : "String containing the application name, such as \"iPlanetAMWebAgentService\",
or \"mypolicyset\"",
      "type" : "string"
    },
    "actionValues" : {
      "title" : "Action values",
      "description" : "Set of string action names, each set to a boolean indicating whether the action
is allowed. Chosen from the available actions provided by the associated Managing Resource Types
resource type",
      "type" : "object",
```

```
      "additionalProperties" : {
        "type" : "boolean"
      }
    },
    "resources" : {
      "title" : "Resources",
      "description" : "List of the resource name pattern strings to which the policy applies. Must
conform to the pattern templates provided by the associated Managing Resource Types resource type",
      "type" : "array",
      "items" : {
        "type" : "string"
      }
    },
    "subject" : {
      "title" : "Subject",
      "description" : "Specifies the subject conditions to which the policy applies, where subjects
can be combined by using the built-in types \"AND\", \"OR\", and \"NOT\", and where subject
implementations are pluggable",
      "type" : "object"
    },
    "condition" : {
      "title" : "Condition",

      "title" : "Resource Type UUID",
      "description" : "The UUIDs of the resource type associated with the policy",
      "type" : "string"
    },
    "resourceAttributes" : {
      "title" : "Resource Attributes",
      "description" : "List of attributes to return with decisions. These attributes are known as
response attributes",
      "type" : "array",
      "items" : {
        "type" : "object"
      }
    },
    "lastModifiedBy" : {
      "title" : "Last Modified By",
      "description" : "A string containing the universal identifier DN of the subject that most
recently updated the policy",
      "type" : "string"
```

```
    },
    "lastModifiedDate" : {
      "title" : "Last Modified date",
      "description" : "An integer containing the last modified date and time, in number of seconds",
      "type" : "string"
    },
    "createdBy" : {
      "title" : "Created By",
      "description" : "A string containing the universal identifier DN of the subject that created the
 policy",
      "type" : "string"
    },
    "creationDate" : {
      "title" : "Creation Date",
      "description" : "An integer containing the creation date and time, in number of seconds",
      "type" : "string"
    }
  }
}
```

1.138.1.3. delete

Delete policy

Usage:

```
am> delete Policies --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.138.1.4. evaluate

Request policy decisions for specific resources

Usage:

```
am> action Policies --realm Realm --body body --actionName evaluate
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Evaluate action schema",
  "title" : "Evaluate action schema",
  "type" : "object",
  "properties" : {
    "resources" : {
      "type" : "array",
```

```
          "title" : "Resources",
          "description" : "Specifies the list of resources for which to return decisions",
          "items" : {
            "type" : "string"
          }
        },
        "application" : {
          "title" : "Application",
          "description" : "Holds the name of the application, and defaults to \"iPlanetAMWebAgentService\"
  if not specified",
          "type" : "string"
        },
        "subject" : {
          "title" : "Subject",
          "description" : "Holds an object that represents the subject. You can specify one or more of the
  following keys. If you specify multiple keys, the subject can have multiple associated principals,
  and you can use subject conditions corresponding to any type in the request",
          "type" : "object",
          "properties" : {
            "ssoToken" : {
              "title" : "SSOToken",
              "description" : "The value is the SSO token ID string for the subject",
              "type" : "string"
            },
            "jwt" : {
              "title" : "JWT",
              "description" : "The value is a JWT string",
              "type" : "string"
            },
            "claims" : {
              "title" : "Claims",
              "description" : "The value is an object (map) of JWT claims to their values.",
              "type" : "object",
              "additionalProperties" : {
                "type" : "string"
              }
            }
          }
        },
        "environment" : {
          "title" : "Environment",
          "description" : "Holds a map of keys to lists of values",
          "type" : "object",
          "additionalProperties" : {
            "type" : "array",
            "items" : {
              "type" : "string"
            }
          }
        }
      }
    },
    "required" : [ "resources", "application" ]
}
```

1.138.1.5. evaluateTree

Request policy decisions for a tree of resources

Usage:

```
am> action Policies --realm Realm --body body --actionName evaluateTree
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Evaluate tree action schema",
  "title" : "Evaluate tree action schema",
  "type" : "object",
  "properties" : {
    "resource" : {
      "title" : "Resource",
      "description" : "Specifies the root resource for the decisions to return",
      "type" : "string"
    },
    "application" : {
      "title" : "Application",
      "description" : "Holds the name of the application, and defaults to \"iPlanetAMWebAgentService\"
if not specified",
      "type" : "string"
    },
    "subject" : {
      "title" : "Subject",
      "description" : "Holds an object that represents the subject. You can specify one or more of the
following keys. If you specify multiple keys, the subject can have multiple associated principals,
and you can use subject conditions corresponding to any type in the request",
      "type" : "object",
      "properties" : {
        "ssoToken" : {
          "title" : "SSOToken",
          "description" : "The value is the SSO token ID string for the subject",
          "type" : "string"
        },
        "jwt" : {
          "title" : "JWT",
          "description" : "The value is a JWT string",
          "type" : "string"
        },
        "claims" : {
          "title" : "Claims",
          "description" : "The value is an object (map) of JWT claims to their values.",
          "type" : "object",
          "additionalProperties" : {
            "type" : "string"
          }
        }
      }
    },
    "environment" : {
      "title" : "Environment",
      "description" : "Holds a map of keys to lists of values",
      "type" : "object",
```

```
        "additionalProperties" : {
          "type" : "array",
          "items" : {
            "type" : "string"
          }
        }
      }
    }
  },
  "required" : [ "resources", "application" ]
}
```

1.138.1.6. move

Move a list of policies

Usage:

```
am> action Policies --realm Realm --body body --actionName move
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Policy copy action schema",
  "type" : "object",
  "title" : "Policy copy action schema",
  "properties" : {
    "from" : {
      "title" : "Copy/move from",
      "description" : "Policy copy/move origin parameters",
      "type" : "object",
      "properties" : {
        "application" : {
          "title" : "Application",
          "description" : "The policy set in which the input policies are located",
          "type" : "string"
        }
      },
      "required" : [ "application" ]
    },
    "to" : {
      "type" : "object",
      "title" : "Copy/Move To",
      "description" : "Policy copy/move destination parameters",
      "properties" : {
        "application" : {
          "title" : "Application",
          "description" : "The policy set in which to place the output policy. Required when copying
 or moving a policy to a different policy set.",
          "type" : "string"
        },
        "realm" : {
          "title" : "Realm",
```

```
            "description" : "The realm in which to place the output policy. If not specified, OpenAM
    copies or moves the policy within the realm identified in the URL. Required when copying or moving a
    policy to a different realm.",
            "type" : "string"
          },
          "namePostfix" : {
            "title" : "Name postfix",
            "description" : "A value appended to output policy names in order to prevent name clashes",
            "type" : "string"
          }
        },
        "required" : [ "namePostfix" ]
      },
      "resourceTypeMapping" : {
        "title" : "Resource type mapping",
        "description" : "One or more resource types mappings, where the left side of the mapping
    specifies the UUID of a resource type used by the input policies and the right side of the mapping
    specifies the UUID of a resource type used by the output policies. The two resource types should have
    the same resource patterns",
        "type" : "object",
        "additionalProperties" : {
          "type" : "string"
        }
      }
    }
  },
  "required" : [ "from", "to" ]
}
```

1.138.1.7. query

Query the stored policies

Usage:

```
am> query Policies --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

1.138.1.8. read

Read policy

Usage:

```
am> read Policies --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.138.1.9. update

Update an existing policy

Usage:

```
am> update Policies --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Json schema for the policy resource",
  "title" : "Policy Resource Schema",
  "type" : "object",
  "properties" : {
    "name" : {
      "title" : "Name",
      "description" : "String matching the name of the application",
      "type" : "string"
    },
    "active" : {
      "title" : "Active flag",
      "description" : "Boolean indicating whether OpenAM considers the policy active for evaluation
purposes, defaults to false",
      "type" : "boolean"
    },
    "description" : {
      "title" : "Description",
      "description" : "String describing the policy",
      "type" : "string"
    },
    "applicationName" : {
      "title" : "Application name",
      "description" : "String containing the application name, such as \"iPlanetAMWebAgentService\",
or \"mypolicyset\"",
      "type" : "string"
    },
    "actionValues" : {
      "title" : "Action values",
      "description" : "Set of string action names, each set to a boolean indicating whether the action
is allowed. Chosen from the available actions provided by the associated Managing Resource Types
resource type",
      "type" : "object",
      "additionalProperties" : {
        "type" : "boolean"
      }
    },
    "resources" : {
      "title" : "Resources",
```

```
      "description" : "List of the resource name pattern strings to which the policy applies. Must
conform to the pattern templates provided by the associated Managing Resource Types resource type",
      "type" : "array",
      "items" : {
        "type" : "string"
      }
    },
    "subject" : {
      "title" : "Subject",
      "description" : "Specifies the subject conditions to which the policy applies, where subjects
can be combined by using the built-in types \"AND\", \"OR\", and \"NOT\", and where subject
implementations are pluggable",
      "type" : "object"
    },
    "condition" : {
      "title" : "Condition",

      },
      "creationDate" : {
        "title" : "Creation Date",
        "description" : "An integer containing the creation date and time, in number of seconds",
        "type" : "string"
      }
    }
  }
}
```

1.139. PolicyAgents

1.139.1. Realm Operations

Agents handler that is responsible for managing agents

Resource path: `/realm-config/agents/2.2_Agent`

Resource version: `1.0`

1.139.1.1. create

Usage:

```
am> create PolicyAgents --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "cdssoRootUrl" : {
      "title" : "Agent Key Value(s)",
      "description" : "Set the agent properties with a key/value pair. This property is used by AM to
  receive agent requests for credential assertions about users. Currently, only one property is valid
  and all other properties will be ignored. Use the following format: <br> agentRootURL=protocol://
  hostname:port/ <br> The entry must be precise and agentRootURL is case sensitive.",
      "propertyOrder" : 22500,
      "items" : {
        "type" : "string"
```

```
      },
      "type" : "object",
      "exampleValue" : "",
      "properties" : {
        "inherited" : {
          "type" : "boolean",
          "required" : true
        },
        "value" : {
          "type" : "array",
          "required" : true
        }
      }
    },
    "userpassword" : {
      "title" : "Password",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "status" : {
      "title" : "Status",
      "description" : "Status of the agent configuration.",
      "propertyOrder" : 200,
      "type" : "object",
      "exampleValue" : "",
      "properties" : {
        "inherited" : {
          "type" : "boolean",
          "required" : true
        },
        "value" : {
          "type" : "string",
          "required" : true
        }
      }
    },
    "description" : {
      "title" : "Description",
      "description" : "",
      "propertyOrder" : 22400,
      "type" : "object",
      "exampleValue" : "",
      "properties" : {
        "inherited" : {
          "type" : "boolean",
          "required" : true
        },
        "value" : {
          "type" : "string",
          "required" : true
        }
      }
    }
  }
}
```

```
}
```

1.139.1.2. delete

Usage:

```
am> delete PolicyAgents --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.139.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PolicyAgents --realm Realm --actionName getAllTypes
```

1.139.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PolicyAgents --realm Realm --actionName getCreatableTypes
```

1.139.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PolicyAgents --realm Realm --actionName nextdescendents
```

1.139.1.6. query

Querying the agents of a specific type

Usage:

```
am> query PolicyAgents --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.139.1.7. read

Usage:

```
am> read PolicyAgents --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.139.1.8. update

Usage:

```
am> update PolicyAgents --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "cdssoRootUrl" : {
      "title" : "Agent Key Value(s)",
      "description" : "Set the agent properties with a key/value pair. This property is used by AM to
 receive agent requests for credential assertions about users. Currently, only one property is valid
 and all other properties will be ignored. Use the following format: <br> agentRootURL=protocol://
hostname:port/ <br> The entry must be precise and agentRootURL is case sensitive.",
      "propertyOrder" : 22500,
      "items" : {
        "type" : "string"
      },
      "type" : "object",
      "exampleValue" : "",
      "properties" : {
        "inherited" : {
          "type" : "boolean",
          "required" : true
        },
        "value" : {
          "type" : "array",
```

```
            "required" : true
          }
        }
      },
      "userpassword" : {
        "title" : "Password",
        "description" : "",
        "propertyOrder" : 100,
        "required" : true,
        "type" : "string",
        "format" : "password",
        "exampleValue" : ""
      },
      "status" : {
        "title" : "Status",
        "description" : "Status of the agent configuration.",
        "propertyOrder" : 200,
        "type" : "object",
        "exampleValue" : "",
        "properties" : {
          "inherited" : {
            "type" : "boolean",
            "required" : true
          },
          "value" : {
            "type" : "string",
            "required" : true
          }
        }
      },
      "description" : {
        "title" : "Description",
        "description" : "",
        "propertyOrder" : 22400,
        "type" : "object",
        "exampleValue" : "",
        "properties" : {
          "inherited" : {
            "type" : "boolean",
            "required" : true
          },
          "value" : {
            "type" : "string",
            "required" : true
          }
        }
      }
    }
  }
}
```

1.140. PolicyConfiguration

1.140.1. Realm Operations

Resource path: `/realm-config/services/policyconfiguration`

Resource version: `1.0`

1.140.1.1. create

Usage:

```
am> create PolicyConfiguration --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "usersBaseDn" : {
      "title" : "LDAP Users Base DN",
      "description" : "Base DN for LDAP Users subject searches.",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "policyHeartbeatTimeUnit" : {
      "title" : "Heartbeat Unit",
      "description" : "Defines the time unit corresponding to the Heartbeat Interval
setting.<br><br>Use this option in case a firewall/loadbalancer can close idle connections, since the
heartbeat requests will ensure that the connections won't become idle.",
      "propertyOrder" : 1850,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "bindDn" : {
      "title" : "LDAP Bind DN",
      "description" : "Bind DN to connect to the directory server for policy information.",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "bindPassword" : {
      "title" : "LDAP Bind Password",
      "description" : "Bind password to connect to the directory server for policy information.",
      "propertyOrder" : 800,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "connectionPoolMaximumSize" : {
      "title" : "LDAP Connection Pool Maximum Size",
      "description" : "Maximum number of connections in the pool.",
```

```
      "propertyOrder" : 1800,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "ldapServer" : {
      "title" : "Primary LDAP Server",
      "description" : "Configuration directory server host:port that OpenAM searches for policy
information.<p><p>Format: <code>local OpenAM server name | hostname:port</code><p><p>Multiple
entries must be prefixed by local server name. Make sure to place the multiple entries on a single
 line and separate the hostname:port URLs with a space. <p><p>For example, openam.example.com|
opendj.example.com:1389 opendj.example.com:2389",

      }
    }
  }
}
```

1.140.1.2. delete

Usage:

```
am> delete PolicyConfiguration --realm Realm
```

1.140.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PolicyConfiguration --realm Realm --actionName getAllTypes
```

1.140.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PolicyConfiguration --realm Realm --actionName getCreatableTypes
```

1.140.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PolicyConfiguration --realm Realm --actionName nextdescendents
```

1.140.1.6. read

Usage:

```
am> read PolicyConfiguration --realm Realm
```

1.140.1.7. update

Usage:

```
am> update PolicyConfiguration --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "usersBaseDn" : {
      "title" : "LDAP Users Base DN",

   }
```

1.140.2. Global Operations

Resource path: `/global-config/services/policyconfiguration`

Resource version: `1.0`

1.140.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:
```
am> action PolicyConfiguration --global --actionName getAllTypes
```

1.140.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:
```
am> action PolicyConfiguration --global --actionName getCreatableTypes
```

1.140.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:
```
am> action PolicyConfiguration --global --actionName nextdescendents
```

1.140.2.4. read

Usage:
```
am> read PolicyConfiguration --global
```

1.140.2.5. update

Usage:
```
am> update PolicyConfiguration --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "continueEvaluationOnDeny" : {
      "title" : "Continue Evaluation on Deny Decision",
      "description" : "If no, then OpenAM stops evaluating policy as soon as it reaches a deny
 decision.",
      "propertyOrder" : 200,

1.141. PollingWaitNode

1.141.1. Realm Operations

Resource path: /realm-config/authentication/authenticationtrees/nodes/PollingWaitNode

Resource version: 1.0

1.141.1.1. create

Usage:

```
am> create PollingWaitNode --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",
  "properties" : {
    "exitMessage" : {
      "title" : "Exit Message",
      "description" : "Localisation overrides for the exit message. The whole string will be displayed
as a link. This is a map of locale to message.",
      "propertyOrder" : 600,
      "patternProperties" : {
        ".*" : {
          "type" : "string"
        }
      },
      "type" : "object",
      "exampleValue" : ""
    },
    "spamDetectionEnabled" : {
      "title" : "Enable Spam Detection",
      "description" : "Choose whether spam detection is enforced for this node. Creates a new
outcome.",
      "propertyOrder" : 200,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "waitingMessage" : {
      "title" : "Waiting Message",
      "description" : "Localisation overrides for the waiting message. May use {{time}} to get the
number of seconds remaining. This is a map of locale to message.",
      "propertyOrder" : 400,
      "patternProperties" : {
        ".*" : {
          "type" : "string"
        }
      },
      "type" : "object",
      "exampleValue" : ""
    },
    "exitable" : {
      "title" : "Exitable",
      "description" : "Choose whether to display a link which allows the user to leave the node early.
Creates a new outcome.",
      "propertyOrder" : 500,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "secondsToWait" : {
      "title" : "Seconds To Wait",
      "description" : "How many seconds to wait before proceeding to the next node in the tree.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
```

```
    },
    "spamDetectionTolerance" : {
      "title" : "Spam Tolerance",
      "description" : "How many times a user may resubmit to this node before the authentication is
 failed.",
      "propertyOrder" : 300,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "spamDetectionEnabled", "spamDetectionTolerance", "waitingMessage", "secondsToWait",
 "exitable", "exitMessage" ]
}
```

1.141.1.2. delete

Usage:

```
am> delete PollingWaitNode --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.141.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PollingWaitNode --realm Realm --actionName getAllTypes
```

1.141.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PollingWaitNode --realm Realm --actionName getCreatableTypes
```

1.141.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action PollingWaitNode --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
configuration schema."
}
```

1.141.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PollingWaitNode --realm Realm --actionName nextdescendents
```

1.141.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query PollingWaitNode --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.141.1.8. read

Usage:

```
am> read PollingWaitNode --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.141.1.9. update

Usage:

```
am> update PollingWaitNode --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",
  "properties" : {
    "exitMessage" : {
      "title" : "Exit Message",
      "description" : "Localisation overrides for the exit message. The whole string will be displayed
as a link. This is a map of locale to message.",
      "propertyOrder" : 600,
      "patternProperties" : {
        ".*" : {
          "type" : "string"
        }
      },
      "type" : "object",
      "exampleValue" : ""
    },
    "spamDetectionEnabled" : {
      "title" : "Enable Spam Detection",
      "description" : "Choose whether spam detection is enforced for this node. Creates a new
outcome.",
      "propertyOrder" : 200,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "waitingMessage" : {
      "title" : "Waiting Message",
      "description" : "Localisation overrides for the waiting message. May use {{time}} to get the
number of seconds remaining. This is a map of locale to message.",
      "propertyOrder" : 400,
      "patternProperties" : {
        ".*" : {
          "type" : "string"
        }
      },
      "type" : "object",
      "exampleValue" : ""
    },
    "exitable" : {
      "title" : "Exitable",
      "description" : "Choose whether to display a link which allows the user to leave the node early.
Creates a new outcome.",
      "propertyOrder" : 500,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "secondsToWait" : {
      "title" : "Seconds To Wait",
      "description" : "How many seconds to wait before proceeding to the next node in the tree.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
```

```
        },
        "spamDetectionTolerance" : {
          "title" : "Spam Tolerance",
          "description" : "How many times a user may resubmit to this node before the authentication is
   failed.",
          "propertyOrder" : 300,
          "type" : "integer",
          "exampleValue" : ""
        }
      },
      "required" : [ "spamDetectionEnabled", "spamDetectionTolerance", "waitingMessage", "secondsToWait",
   "exitable", "exitMessage" ]
   }
```

1.142. PrometheusReporter

1.142.1. Global Operations

Resource path: `/global-config/services/monitoring/prometheus`

Resource version: `1.0`

1.142.1.1. create

Usage:

```
am> create PrometheusReporter --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "username" : {
      "title" : "Username",
      "description" : "",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "enabled" : {
      "title" : "Enabled",
```

```
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "password" : {
      "title" : "Password",
      "description" : "",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "authenticationType" : {
      "title" : "Authentication Type",
      "description" : "",
      "propertyOrder" : 150,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.142.1.2. delete

Usage:

```
am> delete PrometheusReporter --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.142.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PrometheusReporter --global --actionName getAllTypes
```

1.142.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PrometheusReporter --global --actionName getCreatableTypes
```

1.142.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PrometheusReporter --global --actionName nextdescendents
```

1.142.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query PrometheusReporter --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.142.1.7. read

Usage:

```
am> read PrometheusReporter --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.142.1.8. update

Usage:

```
am> update PrometheusReporter --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
```

```
      "type" : "object",
      "properties" : {
        "username" : {
          "title" : "Username",
          "description" : "",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "enabled" : {
          "title" : "Enabled",
          "description" : "",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        },
        "password" : {
          "title" : "Password",
          "description" : "",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "string",
          "format" : "password",
          "exampleValue" : ""
        },
        "authenticationType" : {
          "title" : "Authentication Type",
          "description" : "",
          "propertyOrder" : 150,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      }
    }
```

1.143. ProvisionDynamicAccount

1.143.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/ProvisionDynamicAccountNode`

Resource version: `1.0`

1.143.1.1. create

Usage:

```
am> create ProvisionDynamicAccount --realm Realm --id id --body body
```

Parameters:

`--id`

> The unique identifier for the resource.

`--body`

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "accountProviderClass" : {
      "title" : "Account Provider Class",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "accountProviderClass" ]
}
```

1.143.1.2. delete

Usage:

```
am> delete ProvisionDynamicAccount --realm Realm --id id
```

Parameters:

`--id`

> The unique identifier for the resource.

1.143.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ProvisionDynamicAccount --realm Realm --actionName getAllTypes
```

1.143.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ProvisionDynamicAccount --realm Realm --actionName getCreatableTypes
```

1.143.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action ProvisionDynamicAccount --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.143.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ProvisionDynamicAccount --realm Realm --actionName nextdescendents
```

1.143.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ProvisionDynamicAccount --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.143.1.8. read

Usage:

```
am> read ProvisionDynamicAccount --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.143.1.9. update

Usage:

```
am> update ProvisionDynamicAccount --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "properties" : {
>     "accountProviderClass" : {
>       "title" : "Account Provider Class",
>       "description" : "",
>       "propertyOrder" : 100,
>       "type" : "string",
>       "exampleValue" : ""
>     }
>   },
>   "required" : [ "accountProviderClass" ]
> }
> ```

1.144. ProvisionIDMAccount

1.144.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/ProvisionIdmAccountNode`

Resource version: `1.0`

1.144.1.1. create

Usage:

```
am> create ProvisionIDMAccount --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "accountProviderClass" : {
      "title" : "Account Provider Class",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "accountProviderClass" ]
}
```

1.144.1.2. delete

Usage:

```
am> delete ProvisionIDMAccount --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.144.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ProvisionIDMAccount --realm Realm --actionName getAllTypes
```

1.144.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ProvisionIDMAccount --realm Realm --actionName getCreatableTypes
```

1.144.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action ProvisionIDMAccount --realm Realm --body body --actionName listOutcomes
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.144.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ProvisionIDMAccount --realm Realm --actionName nextdescendents
```

1.144.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ProvisionIDMAccount --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.144.1.8. read

Usage:

```
am> read ProvisionIDMAccount --realm Realm --id id
```

Parameters:

`--id`

> The unique identifier for the resource.

1.144.1.9. update

Usage:

```
am> update ProvisionIDMAccount --realm Realm --id id --body body
```

Parameters:

`--id`

> The unique identifier for the resource.

`--body`

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "properties" : {
>     "accountProviderClass" : {
>       "title" : "Account Provider Class",
>       "description" : "",
>       "propertyOrder" : 100,
>       "type" : "string",
>       "exampleValue" : ""
>     }
>   },
>   "required" : [ "accountProviderClass" ]
> }
> ```

1.145. PushNotification

1.145.1. Realm Operations

Resource path: `/realm-config/services/pushNotification`

Resource version: `1.0`

1.145.1.1. create

Usage:

```
am> create PushNotification --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "mdConcurrency" : {
      "title" : "Response Cache Concurrency",

      }
    }
  }
}
```

1.145.1.2. delete

Usage:

```
am> delete PushNotification --realm Realm
```

1.145.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PushNotification --realm Realm --actionName getAllTypes
```

1.145.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PushNotification --realm Realm --actionName getCreatableTypes
```

1.145.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PushNotification --realm Realm --actionName nextdescendents
```

1.145.1.6. read

Usage:

```
am> read PushNotification --realm Realm
```

1.145.1.7. update

Usage:

```
am> update PushNotification --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "mdConcurrency" : {
      "title" : "Response Cache Concurrency",
      "description" : "Level of concurrency to use when accessing the message dispatcher cache.
 Defaults to <code>16</code>, and must be greater than <code>0</code>. Choose a value to accommodate
 as many threads as will ever concurrently access the message dispatcher cache.",

  }
}
```

1.145.2. Global Operations

Resource path: `/global-config/services/pushNotification`

Resource version: `1.0`

1.145.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PushNotification --global --actionName getAllTypes
```

1.145.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PushNotification --global --actionName getCreatableTypes
```

1.145.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PushNotification --global --actionName nextdescendents
```

1.145.2.4. read

Usage:

```
am> read PushNotification --global
```

1.145.2.5. update

Usage:

```
am> update PushNotification --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "secret" : {
          "title" : "SNS Access Key Secret",
          "description" : "Amazon Simple Notification Service Access Key Secret. For more information,

```

1.146. PushNotificationResponse

1.146.1. Realm Operations

Push Authentication depends on the secure verification of information sent from the server to the client, and from the client to the server. This allows the server to verify that the notification was received by the original device, and for the device to verify that only the server sent out the original request. This endpoint provides the place for the device to return responses to the server to requests received either by QR code or by push notification.

Resource path: `/push/sns/message`

Resource version: `1.0`

1.146.1.1. authenticate

Message sent from device to server in response to a request for authentication sent to the device via Push notification. This message is generally sent from the ForgeRock Authenticator app.

Usage:

```
am> action PushNotificationResponse --realm Realm --body body --actionName authenticate
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "messageId" : {
      "type" : "string",
      "title" : "Message ID",
      "description" : "Unique message identifier"
    },
    "jwt" : {
      "type" : "string",
      "title" : "JWT",
      "description" : "Signed JWT containing claims:\n* `response`: Response to challenge (Base64
 encoding of the HmacSHA256 hashing of the decoded shared secret and the decoded challenge)\n* `deny`:
 Indication that this auth attempt should be shut down (boolean)"
    }
  },
  "required" : [ "messageId", "jwt" ]
}
```

1.146.1.2. register

Message sent from device to server in response to a registration message received on the device via a QR code. This message is generally sent from the ForgeRock Authenticator app.

Usage:

```
am> action PushNotificationResponse --realm Realm --body body --actionName register
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "messageId" : {
      "type" : "string",
      "title" : "Message ID",
      "description" : "Unique message identifier"
    },
    "jwt" : {
      "type" : "string",
      "title" : "JWT",
      "description" : "Signed JWT containing claims:\n* `response`: Response to challenge (Base64
 encoding of the HmacSHA256 hashing of the decoded shared secret and the decoded challenge)\n*
 `mechanismUid`: The device-specific identifier for the just-registered mechanism (string)\n*
 `deviceId`: The registration token used by GCM or APNS (string)\n* `deviceType`: `android` or `ios`
 (string)\n* `communicationType`: `gcm` or `apns` (string)"
    }
  },
  "required" : [ "messageId", "jwt" ]
}
```

1.147. PushResultVerifierNode

1.147.1. Realm Operations

Resource path: /realm-config/authentication/authenticationtrees/nodes/PushResultVerifierNode

Resource version: 1.0

1.147.1.1. create

Usage:

```
am> create PushResultVerifierNode --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.147.1.2. delete

Usage:

```
am> delete PushResultVerifierNode --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.147.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PushResultVerifierNode --realm Realm --actionName getAllTypes
```

1.147.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PushResultVerifierNode --realm Realm --actionName getCreatableTypes
```

1.147.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action PushResultVerifierNode --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.147.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PushResultVerifierNode --realm Realm --actionName nextdescendents
```

1.147.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query PushResultVerifierNode --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.147.1.8. read

Usage:

```
am> read PushResultVerifierNode --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.147.1.9. update

Usage:

```
am> update PushResultVerifierNode --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.148. PushSender

1.148.1. Realm Operations

Resource path: /realm-config/authentication/authenticationtrees/nodes/PushAuthenticationSenderNode

Resource version: 1.0

1.148.1.1. create

Usage:

```
am> create PushSender --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "mandatory" : {
      "title" : "Remove 'skip' option",
      "description" : "If checked, users will no longer be able to skip the module, and must interact
 with it.",
      "propertyOrder" : 300,
```

```
      "type" : "boolean",
      "exampleValue" : ""
    },
    "messageTimeout" : {
      "title" : "Message Timeout",
      "description" : "The duration (in ms) that the message will time out after.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    },
    "userMessage" : {
      "title" : "User Message",
      "description" : "The message to send to the user. {{user}} and {{issuer}} may be used as
wildcards.",
      "propertyOrder" : 200,
      "patternProperties" : {
        ".*" : {
          "type" : "string"
        }
      },
      "type" : "object",
      "exampleValue" : ""
    }
  },
  "required" : [ "userMessage", "mandatory", "messageTimeout" ]
}
```

1.148.1.2. delete

Usage:

```
am> delete PushSender --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.148.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action PushSender --realm Realm --actionName getAllTypes
```

1.148.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action PushSender --realm Realm --actionName getCreatableTypes
```

1.148.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action PushSender --realm Realm --body body --actionName listOutcomes
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.148.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action PushSender --realm Realm --actionName nextdescendents
```

1.148.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query PushSender --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.148.1.8. read

Usage:

```
am> read PushSender --realm Realm --id id
```

Parameters:

`--id`

> The unique identifier for the resource.

1.148.1.9. update

Usage:

```
am> update PushSender --realm Realm --id id --body body
```

Parameters:

`--id`

> The unique identifier for the resource.

`--body`

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "mandatory" : {
      "title" : "Remove 'skip' option",
      "description" : "If checked, users will no longer be able to skip the module, and must interact
 with it.",
      "propertyOrder" : 300,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "messageTimeout" : {
      "title" : "Message Timeout",
      "description" : "The duration (in ms) that the message will time out after.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    },
    "userMessage" : {
      "title" : "User Message",
      "description" : "The message to send to the user. {{user}} and {{issuer}} may be used as
wildcards.",
      "propertyOrder" : 200,
      "patternProperties" : {
        ".*" : {
          "type" : "string"
        }
      },
      "type" : "object",
      "exampleValue" : ""
    }
  },
  "required" : [ "userMessage", "mandatory", "messageTimeout" ]
}
```

1.149. PushUserDevices

1.149.1. Realm Operations

The Push devices service is responsible for exposing functions to change the collection of Push authentication devices. The supported methods are action, delete, query

Resource path: `/users/{user}/devices/2fa/push`

Resource version: `1.0`

1.149.1.1. check

Checks if the user's Authenticator Push module is 'skippable' and returns the result as a boolean

Usage:

```
am> action PushUserDevices --realm Realm --body body --user user --actionName check
```

Parameters:

`--body`

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "$schema" : "http://json-schema.org/draft-04/schema#",
>   "description" : "Push user device check action request schema",
>   "type" : "object",
>   "title" : "Push user device check action request schema"
> }
> ```

`--user`

> The Push devices service is responsible for exposing functions to change the collection of Push authentication devices. The supported methods are action, delete, query

1.149.1.2. delete

Delete Push user device

Usage:

```
am> delete PushUserDevices --realm Realm --id id --user user
```

Parameters:

`--id`

> The unique identifier for the resource.

--user

> The Push devices service is responsible for exposing functions to change the collection of Push authentication devices. The supported methods are action, delete, query

1.149.1.3. query

Query the user's device profile

Usage:

```
am> query PushUserDevices --realm Realm --filter filter --user user
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

--user

> The Push devices service is responsible for exposing functions to change the collection of Push authentication devices. The supported methods are action, delete, query

1.149.1.4. reset

Sets the user's 'skippable' selection of Authenticator Push module to default (NOT_SET) and deletes their profile's attribute

Usage:

```
am> action PushUserDevices --realm Realm --body body --user user --actionName reset
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "$schema" : "http://json-schema.org/draft-04/schema#",
>   "description" : "Push user device reset action request schema",
>   "type" : "object",
>   "title" : "Push user device reset action request schema"
> }
> ```

--user

> The Push devices service is responsible for exposing functions to change the collection of Push authentication devices. The supported methods are action, delete, query

1.149.1.5. skip

Sets the user's ability to skip an Authenticator Push module

Usage:

```
am> action PushUserDevices --realm Realm --body body --user user --actionName skip
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "Push user device skip action request schema",
  "type" : "object",
  "title" : "Push user device skip action request schema",
  "properties" : {
    "value" : {
      "type" : "boolean",
      "title" : "Skip push module response value",
      "description" : "True if the push device is set to skipped"
    }
  },
  "required" : [ "value" ]
}
```

--user

The Push devices service is responsible for exposing functions to change the collection of Push authentication devices. The supported methods are action, delete, query

1.150. RESTSecurityTokenServices

1.150.1. Realm Operations

The REST STS endpoint is responsible for storing the configuration of instances of REST Security Token Services (STS). Available operations are create, read, update, delete, query, schema and template.

Resource path: `/realm-config/services/sts/rest-sts`

Resource version: `1.0`

1.150.1.1. create

Usage:

```
am> create RESTSecurityTokenServices --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "restStsSaml2" : {
      "type" : "object",

 rest-authN. For each validated token type (other than OpenAM), the REST
 authN elements which will validate token instances. <br>Entry format:
 <code>TokenType;authIndexType;authIndexValue;context_key=context_value,context_key1=context_value1</
code>. <br>The <code>context_key=context_value</code> entries are optional.<br><br>Each deployed
 STS is configured with the authentication targets for each input token type for each supported
 token transformation. For example, if the transformation OPENIDCONNECT->SAML2 is supported, the
 STS instance must be configured with information specifying which elements of the OpenAM restful
 authentication context needs to be consumed to validate the OPENIDCONNECT token. The elements
 of the configuration tuple are separated by '|'. <br>The first element is the input token type
 in the token transform: i.e. X509, OPENIDCONNECT, USERNAME, or OPENAM. The second element is the
 authentication target - i.e. either 'module' or 'service', and the third element is the name of
 the authentication module or service. The fourth (optional) element provides the STS authentication
 context information about the to-be-consumed authentication context. <br>When transforming OpenID
 Connect Id tokens, the OpenID Connect authentication module must be consumed, and thus a deployed
 rest-sts instance must be configured with the name of the header/cookie element where the OpenID
 Connect Id token will be placed. For this example, the following string would define these
 configurations: <code>OPENIDCONNECT|module|oidc|oidc_id_token_auth_target_header_key=oidc_id_token</
code>. In this case, 'oidc' is the name of the OpenID Connect authentication module created to
 authenticate OpenID Connect tokens. <br>When transforming a X509 Certificate, the Certificate
 module must be consumed, and the published rest-sts instance must be configured with the name of
 the Certificate module (or the service containing the module), and the header name configured for
 the Certificate module corresponding to where the Certificate module can expect to find the to-be-
validated Certificate. The following string would define these configurations: <code>X509|module|
cert_module|x509_token_auth_target_header_key=client_cert</code>. In this case 'cert_module' is the
 name of the Certificate module, and client_cert is the header name where Certificate module has been
 configured to find the client's Certificate.",

```

1.150.1.2. delete

Usage:

```
am> delete RESTSecurityTokenServices --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.150.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RESTSecurityTokenServices --realm Realm --actionName getAllTypes
```

1.150.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RESTSecurityTokenServices --realm Realm --actionName getCreatableTypes
```

1.150.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RESTSecurityTokenServices --realm Realm --actionName nextdescendents
```

1.150.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query RESTSecurityTokenServices --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.150.1.7. read

Usage:

```
am> read RESTSecurityTokenServices --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.150.1.8. update

Usage:

```
am> update RESTSecurityTokenServices --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

          "title" : "Authentication Target Mappings",
          "description" : "Configuration of consumption of OpenAM's
rest-authN. For each validated token type (other than OpenAM), the REST
authN elements which will validate token instances. <br>Entry format:
<code>TokenType;authIndexType;authIndexValue;context_key=context_value,context_key1=context_value1</
code>. <br>The <code>context_key=context_value</code> entries are optional.<br><br>Each deployed
STS is configured with the authentication targets for each input token type for each supported
token transformation. For example, if the transformation OPENIDCONNECT->SAML2 is supported, the
STS instance must be configured with information specifying which elements of the OpenAM restful
authentication context needs to be consumed to validate the OPENIDCONNECT token. The elements
of the configuration tuple are separated by '|'. <br>The first element is the input token type
in the token transform: i.e. X509, OPENIDCONNECT, USERNAME, or OPENAM. The second element is the
authentication target - i.e. either 'module' or 'service', and the third element is the name of
the authentication module or service. The fourth (optional) element provides the STS authentication
context information about the to-be-consumed authentication context. <br>When transforming OpenID
Connect Id tokens, the OpenID Connect authentication module must be consumed, and thus a deployed
rest-sts instance must be configured with the name of the header/cookie element where the OpenID
Connect Id token will be placed. For this example, the following string would define these
configurations: <code>OPENIDCONNECT|module|oidc|oidc_id_token_auth_target_header_key=oidc_id_token</
code>. In this case, 'oidc' is the name of the OpenID Connect authentication module created to
authenticate OpenID Connect tokens. <br>When transforming a X509 Certificate, the Certificate
module must be consumed, and the published rest-sts instance must be configured with the name of
the Certificate module (or the service containing the module), and the header name configured for
the Certificate module corresponding to where the Certificate module can expect to find the to-be-
validated Certificate. The following string would define these configurations: <code>X509|module|
cert_module|x509_token_auth_target_header_key=client_cert</code>. In this case 'cert_module' is the
name of the Certificate module, and client_cert is the header name where Certificate module has been
configured to find the client's Certificate.",

            "title" : "Client Certificate Header Key",
            "description" : "TLS-offload host certificate header key<br><br>Token transformation
  which take X509 Certificates as the input token require that the X509 Certificate be presented
  via two-way TLS, so that the TLS handshake can validate client certificate ownership. A
  standard means of obtaining the client certificate presented via two-way TLS is via the
  javax.servlet.request.X509Certificate attribute in the ServletRequest. However, in TLS-offloaded
  deployments, the TLS-offloader must communicate the client certificate to its ultimate destination
  via an Http header. If this rest-sts instance is to support token transformations with X509
  Certificate input, and OpenAM will be deployed in a TLS-offloaded context, then this value must be
  set to the header value which the TLS-offloading engine will use to set client certificates presented
  via the TLS handshake.",

1.151. RadiusClient

1.151.1. Global Operations

Resource path: `/global-config/services/RadiusServerService/radiusClient`

Resource version: `1.0`

1.151.1.1. create

Usage:

```
am> create RadiusClient --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
```

```
 "properties" : {
   "clientIpAddress" : {
     "title" : "Client IP Address",
     "description" : "The IP Address of the client.<br><br><a href=\"http://tools.ietf.org/html/
rfc2865#section-5.4\" target=\"_blank\">Section 5.4 of the RADIUS Authentication Specification,
 RFC 2865</a>, indicates that the source IP address of the Access-Request packet <em>MUST</em> be
 used to identify a configured client and hence determine the shared secret to use for decrypting
 the User-Password field.<p><p>This property should hold the source IP address of the client. This
 should match the value obtained from Java's <code>InetSocketAddress.getAddress().toString()</code>
 function.<p><p>To verify the value, send an Access-Request packet to OpenAM's RADIUS port and watch
 for a message stating: <code>\"No Defined RADIUS Client matches IP address '/127.0.0.1'. Dropping
 request.\"</code>. The value used in this property should match the IP address returned in the single
 quotes.",
     "propertyOrder" : 100,
     "required" : true,
     "type" : "string",
     "exampleValue" : ""
   },
   "clientPacketsLogged" : {
     "title" : "Log Packet Contents for this Client",
     "description" : "Indicates if full packet contents should be dumped to the log.<br><br>When
 troubleshooting issues with RADIUS it is helpful to know what was received in a given packet.
 Enabling this feature will cause packet contents to be logged in a human consumable format. The only
 caveat is that the USER_PASSWORD field will be obfiscated by replacing with asterisks. This should
 only be enabled for troubleshooting as it adds significant content to logs and slows processing.",

      }
    }
  }
}
```

1.151.1.2. delete

Usage:

```
am> delete RadiusClient --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.151.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RadiusClient --global --actionName getAllTypes
```

1.151.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RadiusClient --global --actionName getCreatableTypes
```

1.151.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RadiusClient --global --actionName nextdescendents
```

1.151.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query RadiusClient --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.151.1.7. read

Usage:

```
am> read RadiusClient --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.151.1.8. update

Usage:

```
am> update RadiusClient --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "clientIpAddress" : {
      "title" : "Client IP Address",

```

1.152.1.2. delete

Usage:

```
am> delete RadiusModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.152.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RadiusModule --realm Realm --actionName getAllTypes
```

1.152.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RadiusModule --realm Realm --actionName getCreatableTypes
```

1.152.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RadiusModule --realm Realm --actionName nextdescendents
```

1.152.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query RadiusModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.152.1.7. read

Usage:

```
am> read RadiusModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.152.1.8. update

Usage:

```
am> update RadiusModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

1.152.2. Global Operations

Resource path: `/global-config/authentication/modules/radius`

Resource version: `1.0`

1.152.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RadiusModule --global --actionName getAllTypes
```

1.152.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RadiusModule --global --actionName getCreatableTypes
```

1.152.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RadiusModule --global --actionName nextdescendents
```

1.152.2.4. read

Usage:

```
am> read RadiusModule --global
```

1.152.2.5. update

Usage:

```
am> update RadiusModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "primaryRadiusServers" : {

```

1.153. RadiusServer

1.153.1. Global Operations

Resource path: `/global-config/services/RadiusServerService`

Resource version: `1.0`

1.153.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RadiusServer --global --actionName getAllTypes
```

1.153.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RadiusServer --global --actionName getCreatableTypes
```

1.153.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RadiusServer --global --actionName nextdescendents
```

1.153.1.4. read

Usage:

```
am> read RadiusServer --global
```

1.153.1.5. update

Usage:

```
am> update RadiusServer --global --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "radiusServerPort" : {
      "title" : "Listener Port",
      "description" : "The UDP port on which each OpenAM server will listen for RADIUS Access-Request
 packets<br><br>According to the RADIUS Authentication Specification, <a href=\"http://tools.ietf.org/
html/rfc2865\" target=\"_blank\">RFC 2865</a>, the officially assigned port number for RADIUS is
 <code>1812</code>. Specify a value from <code>1024</code> to <code>65535</code>. All client requests
 are handled through the same port.",
```

Amster Entity Reference
Global Operations

```

1.154. Realms

1.154.1. Global Operations

The endpoint for Realm operations

Resource path: `/global-config/realms`

Resource version: `1.0`

1.154.1.1. create

Create a Realm

Usage:

```
am> create Realms --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Represents a Realm Resource",
  "type" : "object",
  "title" : "Realm",
  "properties" : {
    "name" : {
      "type" : "string",
      "title" : "Name",
      "description" : "The name of the Realm"
    },
    "active" : {
      "type" : "boolean",
      "title" : "Active",
      "description" : "True if the Realm is active"
    },
    "parentPath" : {
      "type" : "string",
      "title" : "Parent",
      "description" : "The path of the Realm's parent Realm"
    },
    "aliases" : {
      "type" : "array",
      "title" : "Aliases",
      "description" : "Aliases which can be used reference to the Realm",
      "items" : {
        "type" : "string"
      }
    }
  },
```

```
    "required" : [ "name", "active", "parentPath", "aliases" ]
}
```

1.154.1.2. delete

Delete a Realm

Usage:

```
am> delete Realms --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.154.1.3. query

Usage:

```
am> query Realms --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.154.1.4. read

Read a Realm

Usage:

```
am> read Realms --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.154.1.5. update

Update a Realm

Usage:

```
am> update Realms --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Represents a Realm Resource",
  "type" : "object",
  "title" : "Realm",
  "properties" : {
    "name" : {
      "type" : "string",
      "title" : "Name",
      "description" : "The name of the Realm"
    },
    "active" : {
      "type" : "boolean",
      "title" : "Active",
      "description" : "True if the Realm is active"
    },
    "parentPath" : {
      "type" : "string",
      "title" : "Parent",
      "description" : "The path of the Realm's parent Realm"
    },
    "aliases" : {
      "type" : "array",
      "title" : "Aliases",
      "description" : "Aliases which can be used reference to the Realm",
      "items" : {
        "type" : "string"
      }
    }
  },
  "required" : [ "name", "active", "parentPath", "aliases" ]
}
```

1.155. Records

1.155.1. Realm Operations

Service for creating records.

Resource path: `/records`

Resource version: `1.0`

1.155.1.1. start

Starts recording.

Usage:

```
am> action Records --realm Realm --body body --actionName start
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "The properties of a Record, which can deserialized from json.",
  "type" : "object",
  "title" : "Record properties",
  "properties" : {
    "issueID" : {
      "description" : "A case number is a good choice for the issueID value.",
      "title" : "Issue ID",
      "type" : "integer",
      "format" : "int64"
    },
    "referenceID" : {
      "description" : "A second identifier to segregate multiple recording events for the same
 issue.",
      "title" : "Reference ID",
      "type" : "string"
    },
    "description" : {
      "description" : "A textual description of the recording event.",
      "title" : "Description",
      "type" : "string"
    },
    "threadDump" : {
      "description" : "Object used to specify thread dump settings.",
      "title" : "Thread dump settings",
      "type" : "object",
      "properties" : {
        "enable" : {
          "description" : "Whether to dump threads during the recording event.",
          "title" : "Thread dump enabled",
          "type" : "boolean"
        },
        "delay" : {
          "description" : "Object used to specify an interval at which thread dumps are taken. The
initial thread dump is taken at the start of the recording event; subsequent thread dumps are taken
at multiples of the delay interval.",
          "title" : "Thread dump delay",
          "type" : "object",
          "properties" : {
            "timeUnit" : {
              "description" : "The time unit being used to specify the delay for the thread dumps.",
              "title" : "Thread dump delay time unit",
              "type" : "string",
              "enum" : [ "DAYS", "HOURS", "MINUTES", "SECONDS", "MILLISECONDS", "MICROSECONDS",
 "NANOSECONDS" ]
```

```
            },
            "value" : {
                "description" : "The value for the thread dump delay, in the specified thread dump delay
time unit. The initial thread dump is taken at the start of the recording event; subsequent thread
dumps are taken at multiples of the delay interval.",
                "title" : "Thread dump delay value",
                "type" : "integer",

            }
          }
        }
      },
      "zipEnable" : {
        "description" : "Whether to compress the output directory into a zip file when recording has
stopped.",
        "title" : "Zip enabled",
        "type" : "boolean"
      }
    }
  }
}
```

1.155.1.2. status

Returns status of recording.

Usage:

```
am> action Records --realm Realm --actionName status
```

1.155.1.3. stop

Stops recording.

Usage:

```
am> action Records --realm Realm --actionName stop
```

1.156. RecoveryCodeCollectorDecision

1.156.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/RecoveryCodeCollectorDecisionNode`

Resource version: `1.0`

1.156.1.1. create

Usage:

```
am> create RecoveryCodeCollectorDecision --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "recoveryCodeType" : {
      "title" : "Recovery Code Type",
      "description" : "Determines which type of recovery codes are going to be validated for the
 user.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "recoveryCodeType" ]
}
```

1.156.1.2. delete

Usage:

```
am> delete RecoveryCodeCollectorDecision --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.156.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RecoveryCodeCollectorDecision --realm Realm --actionName getAllTypes
```

1.156.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RecoveryCodeCollectorDecision --realm Realm --actionName getCreatableTypes
```

1.156.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action RecoveryCodeCollectorDecision --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
  configuration schema."
}
```

1.156.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RecoveryCodeCollectorDecision --realm Realm --actionName nextdescendents
```

1.156.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query RecoveryCodeCollectorDecision --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.156.1.8. read

Usage:

```
am> read RecoveryCodeCollectorDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.156.1.9. update

Usage:

```
am> update RecoveryCodeCollectorDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "recoveryCodeType" : {
      "title" : "Recovery Code Type",
      "description" : "Determines which type of recovery codes are going to be validated for the
 user.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "recoveryCodeType" ]
}
```

1.157. RecoveryCodeDisplayNode

1.157.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/RecoveryCodeDisplayNode`

Resource version: `1.0`

1.157.1.1. create

Usage:

```
am> create RecoveryCodeDisplayNode --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.157.1.2. delete

Usage:

```
am> delete RecoveryCodeDisplayNode --realm Realm --id id
```

Parameters:

--id

   The unique identifier for the resource.

1.157.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RecoveryCodeDisplayNode --realm Realm --actionName getAllTypes
```

1.157.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RecoveryCodeDisplayNode --realm Realm --actionName getCreatableTypes
```

1.157.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action RecoveryCodeDisplayNode --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

   The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.157.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RecoveryCodeDisplayNode --realm Realm --actionName nextdescendents
```

1.157.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query RecoveryCodeDisplayNode --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.157.1.8. read

Usage:

```
am> read RecoveryCodeDisplayNode --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.157.1.9. update

Usage:

```
am> update RecoveryCodeDisplayNode --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.158. RegisterLogoutWebhook

1.158.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/RegisterLogoutWebhookNode`

Resource version: `1.0`

1.158.1.1. create

Usage:

```
am> create RegisterLogoutWebhook --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "webhookName" : {
      "title" : "Webhook Name",
      "description" : "The name of the webhook stored using the webhook service.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "webhookName" ]
}
```

1.158.1.2. delete

Usage:

```
am> delete RegisterLogoutWebhook --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.158.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RegisterLogoutWebhook --realm Realm --actionName getAllTypes
```

1.158.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RegisterLogoutWebhook --realm Realm --actionName getCreatableTypes
```

1.158.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action RegisterLogoutWebhook --realm Realm --body body --actionName listOutcomes
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.158.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RegisterLogoutWebhook --realm Realm --actionName nextdescendents
```

1.158.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query RegisterLogoutWebhook --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.158.1.8. read

Usage:

```
am> read RegisterLogoutWebhook --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.158.1.9. update

Usage:

```
am> update RegisterLogoutWebhook --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "webhookName" : {
      "title" : "Webhook Name",
      "description" : "The name of the webhook stored using the webhook service.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "webhookName" ]
}
```

1.159. RemoteConsentAgent

1.159.1. Realm Operations

Agents handler that is responsible for managing agents

Resource path: `/realm-config/agents/RemoteConsentAgent`

Resource version: `1.0`

1.159.1.1. create

Usage:

```
am> create RemoteConsentAgent --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "remoteConsentResponseSigningAlg" : {
      "title" : "Consent response signing algorithm",

    }
  }
}
```

1.159.1.2. delete

Usage:

```
am> delete RemoteConsentAgent --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.159.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RemoteConsentAgent --realm Realm --actionName getAllTypes
```

1.159.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RemoteConsentAgent --realm Realm --actionName getCreatableTypes
```

1.159.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RemoteConsentAgent --realm Realm --actionName nextdescendents
```

1.159.1.6. query

Querying the agents of a specific type

Usage:

```
am> query RemoteConsentAgent --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.159.1.7. read

Usage:

```
am> read RemoteConsentAgent --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.159.1.8. update

Usage:

```
am> update RemoteConsentAgent --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "remoteConsentResponseSigningAlg" : {
      "title" : "Consent response signing algorithm",

1.160. RemoteConsentService

1.160.1. Realm Operations

Resource path: `/realm-config/services/RemoteConsentService`

Resource version: `1.0`

1.160.1.1. create

Usage:

```
am> create RemoteConsentService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
```

```
  "type" : "object",
  "properties" : {
    "clientId" : {
      "title" : "Client Name",
      "description" : "The name used to identify this OAuth 2.0 remote consent service when
referencedin other services.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "encryptionKeyAlias" : {
      "title" : "Encryption Key Alias",
      "description" : "The alias of the key in the default keystore to use for encryption.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "jwkStoreCacheTimeout" : {
      "title" : "JWK Store Cache Timeout (in minutes)",
      "description" : "The cache timeout for the JWK store of the authorization server, in minutes.",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "signingKeyAlias" : {
      "title" : "Signing Key Alias",
      "description" : "The alias of the key in the default keystore to use for signing.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "jwksUriAS" : {
      "title" : "Authorization Server jwk_uri",
      "description" : "The jwk_uri for retrieving the authorization server signing and encryption
keys.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "consentResponseTimeLimit" : {
      "title" : "Consent Response Time Limit (in minutes)",
      "description" : "The time limit set on the consent response JWT before it expires, in minutes.",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "jwkStoreCacheMissCacheTime" : {
      "title" : "JWK Store Cache Miss Cache Time (in minutes)",
      "description" : "The length of time a cache miss is cached, in minutes.",
      "propertyOrder" : 600,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
```

```
      }
    }
}
```

1.160.1.2. delete

Usage:

```
am> delete RemoteConsentService --realm Realm
```

1.160.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RemoteConsentService --realm Realm --actionName getAllTypes
```

1.160.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RemoteConsentService --realm Realm --actionName getCreatableTypes
```

1.160.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RemoteConsentService --realm Realm --actionName nextdescendents
```

1.160.1.6. read

Usage:

```
am> read RemoteConsentService --realm Realm
```

1.160.1.7. update

Usage:

```
am> update RemoteConsentService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "clientId" : {
      "title" : "Client Name",
      "description" : "The name used to identify this OAuth 2.0 remote consent service when
 referencedin other services.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "encryptionKeyAlias" : {
      "title" : "Encryption Key Alias",
      "description" : "The alias of the key in the default keystore to use for encryption.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "jwkStoreCacheTimeout" : {
      "title" : "JWK Store Cache Timeout (in minutes)",
      "description" : "The cache timeout for the JWK store of the authorization server, in minutes.",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "signingKeyAlias" : {
      "title" : "Signing Key Alias",
      "description" : "The alias of the key in the default keystore to use for signing.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "jwksUriAS" : {
      "title" : "Authorization Server jwk_uri",
      "description" : "The jwk_uri for retrieving the authorization server signing and encryption
keys.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "consentResponseTimeLimit" : {
      "title" : "Consent Response Time Limit (in minutes)",
      "description" : "The time limit set on the consent response JWT before it expires, in minutes.",
      "propertyOrder" : 700,
      "required" : true,
```

```
        "type" : "integer",
        "exampleValue" : ""
    },
    "jwkStoreCacheMissCacheTime" : {
        "title" : "JWK Store Cache Miss Cache Time (in minutes)",
        "description" : "The length of time a cache miss is cached, in minutes.",
        "propertyOrder" : 600,
        "required" : true,
        "type" : "integer",
        "exampleValue" : ""
    }
  }
}
```

1.160.2. Global Operations

Resource path: `/global-config/services/RemoteConsentService`

Resource version: `1.0`

1.160.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RemoteConsentService --global --actionName getAllTypes
```

1.160.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RemoteConsentService --global --actionName getCreatableTypes
```

1.160.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RemoteConsentService --global --actionName nextdescendents
```

1.160.2.4. read

Usage:

```
am> read RemoteConsentService --global
```

1.160.2.5. update

Usage:

```
am> update RemoteConsentService --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "clientId" : {
          "title" : "Client Name",
          "description" : "The name used to identify this OAuth 2.0 remote consent service when
 referencedin other services.",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "jwkStoreCacheTimeout" : {
          "title" : "JWK Store Cache Timeout (in minutes)",
          "description" : "The cache timeout for the JWK store of the authorization server, in
minutes.",
          "propertyOrder" : 500,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "signingKeyAlias" : {
          "title" : "Signing Key Alias",
          "description" : "The alias of the key in the default keystore to use for signing.",
          "propertyOrder" : 200,
          "required" : true,

            "required" : true,
            "type" : "string",
            "exampleValue" : ""
          }
        },
        "type" : "object",
        "title" : "Realm Defaults"
    }
  }
}
```

1.161. RemoveSessionProperties

1.161.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/RemoveSessionPropertiesNode`

Resource version: `1.0`

1.161.1.1. create

Usage:

```
am> create RemoveSessionProperties --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "propertyNames" : {
      "title" : "Property Names",
      "description" : "The names of session properties to remove that may have been contributed by
 nodes that executedearlier in the tree. If the properties do not exist, no error will be thrown.
 Names are case sensitive.",
      "propertyOrder" : 100,
      "items" : {
        "type" : "string"
      },
      "minItems" : 1,
      "type" : "array",
      "exampleValue" : ""
    }
  },
  "required" : [ "propertyNames" ]
}
```

1.161.1.2. delete

Usage:

```
am> delete RemoveSessionProperties --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.161.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RemoveSessionProperties --realm Realm --actionName getAllTypes
```

1.161.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RemoveSessionProperties --realm Realm --actionName getCreatableTypes
```

1.161.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action RemoveSessionProperties --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.161.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RemoveSessionProperties --realm Realm --actionName nextdescendents
```

1.161.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query RemoveSessionProperties --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.161.1.8. read

Usage:

```
am> read RemoveSessionProperties --realm Realm --id id
```

Parameters:

--id

>   The unique identifier for the resource.

1.161.1.9. update

Usage:

```
am> update RemoveSessionProperties --realm Realm --id id --body body
```

Parameters:

--id

>   The unique identifier for the resource.

--body

>   The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "propertyNames" : {
      "title" : "Property Names",
      "description" : "The names of session properties to remove that may have been contributed by
 nodes that executedearlier in the tree. If the properties do not exist, no error will be thrown.
 Names are case sensitive.",
      "propertyOrder" : 100,
      "items" : {
        "type" : "string"
      },
      "minItems" : 1,
      "type" : "array",
      "exampleValue" : ""
    }
  },
  "required" : [ "propertyNames" ]
}
```

1.162. ResourceSets

1.162.1. Realm Operations

Resource set resource provider is responsible for managing Resource Sets belonging to a user.
Available operations are update, query, read, revoke all action.

Resource path: `/users/{user}/oauth2/resources/sets`

Resource version: `1.0`

1.162.1.1. query

Query the collection of the user's Resource Set.

Usage:

```
am> query ResourceSets --realm Realm --filter filter --user user
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

--user

Resource set resource provider is responsible for managing Resource Sets belonging to a user. Available operations are update, query, read, revoke all action.

1.162.1.2. read

Read Resource Set from the collection by id.

Usage:

```
am> read ResourceSets --realm Realm --id id --user user
```

Parameters:

--id

The unique identifier for the resource.

--user

Resource set resource provider is responsible for managing Resource Sets belonging to a user. Available operations are update, query, read, revoke all action.

1.162.1.3. update

Update a Resource Set record.

Usage:

```
am> update ResourceSets --realm Realm --id id --body body --user user
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Describes the structure of the OpenAM representation of a user's OAuth Resource
 Set. For further  information see [insert link to the RSR standard], and documentation about UMA in
 OpenAM.",
  "type" : "object",
  "title" : "Resource Set resource schema",
  "properties" : {
    "scopes" : {
      "type" : "array",
      "title" : "Scopes",
      "description" : "List of Resource Set scopes.",
      "items" : {
        "type" : "string"
      }
    },
    "_id" : {
      "type" : "string",
      "title" : "Resource set id",
      "description" : "Unique identifier of the Resource Set."
    },
    "resourceServer" : {
      "type" : "string",
      "title" : "Resource server",
      "description" : "The resources server name."
    },
    "labels" : {
      "type" : "array",
      "title" : "Resource labels",
      "description" : "Labels of the resource.",
      "items" : {
        "type" : "string"
      }
    },
    "name" : {
      "type" : "string",
      "title" : "Resource name",
      "description" : "Name of the resource."
    },
    "icon_uri" : {
      "type" : "string",
      "title" : "Icon uri",
      "description" : "Resource icon uri."
    },
    "resourceOwnerId" : {
      "type" : "string",
      "title" : "Resource owner",
      "description" : "Name of the resource owner."
    },
    "type" : {
      "type" : "string",
      "title" : "Resource type",
      "description" : "Type of the resources."
    }
  }
}
```

```
}
```

--user

Resource set resource provider is responsible for managing Resource Sets belonging to a user.
Available operations are update, query, read, revoke all action.

1.163. ResourceTypes

1.163.1. Realm Operations

The Resource Types resource is responsible for managing resource types, which define a template
for the resources that Managing Policies policies apply to, and the actions associated with those
resources. Available operations are Query, Read, Create, Update, Delete

Resource path: `/resourcetypes`

Resource version: `1.0`

1.163.1.1. create

Create new resource type

Usage:

```
am> create ResourceTypes --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Resource Types Resource schema",
  "type" : "object",
  "title" : "Resource Types Resource schema",
  "properties" : {
    "uuid" : {
      "title" : "UUID",
      "description" : "Unique identifier of the record",
      "type" : "string"
    },
    "name" : {
      "title" : "Name",
```

```
      "description" : "Resource type name",
      "type" : "string"
    },
    "description" : {
      "title" : "Description",
      "description" : "Resource type description",
      "type" : "string"
    },
    "patterns" : {
      "title" : "Patterns",
      "description" : "Resource type patterns",
      "type" : "array",
      "items" : {
        "type" : "string"
      }
    },
    "actions" : {
      "title" : "Actions",

creationDate",
      "type" : "number"
    }
  }
}
```

1.163.1.2. delete

Delete resource type

Usage:

```
am> delete ResourceTypes --realm Realm --id id
```

Parameters:

--id

>The unique identifier for the resource.

1.163.1.3. query

Query the collection of resource types

Usage:

```
am> query ResourceTypes --realm Realm --filter filter
```

Parameters:

--filter

>A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

1.163.1.4. read

Read from the resource types collection by unique identifier

Usage:

```
am> read ResourceTypes --realm Realm --id id
```

Parameters:

--id

>The unique identifier for the resource.

1.163.1.5. update

Update an existing resource type

Usage:

```
am> update ResourceTypes --realm Realm --id id --body body
```

Parameters:

--id

>The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Resource Types Resource schema",
  "type" : "object",
  "title" : "Resource Types Resource schema",

    }
  }
}
```

1.164. RestApis

1.164.1. Global Operations

Resource path: `/global-config/services/rest`

Resource version: `1.0`

1.164.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RestApis --global --actionName getAllTypes
```

1.164.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RestApis --global --actionName getCreatableTypes
```

1.164.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RestApis --global --actionName nextdescendents
```

1.164.1.4. read

Usage:

```
am> read RestApis --global
```

1.164.1.5. update

Usage:

```
am> update RestApis --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaultVersion" : {
      "title" : "Default Resource Version",
      "description" : "The API resource version to use when the REST request does not specify an
explicit version. Choose from:<br><br><ul><li><code>Latest</code>. If an explicit version is not
specified, the latest resource version of an API is used.</li><li><code>Oldest</code>. If an explicit
version is not specified, the oldest supported resource version of an API is used. Note that since
APIs may be deprecated and fall out of support, the oldest <i>supported</i> version may not be the
first version.</li><li><code>None</code>. If an explicit version is not specified, the request will
not be handled and an error status is returned.</li></ul>",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "descriptionsState" : {
      "title" : "API Descriptions",
      "description" : "Whether API Explorer and API Docs are enabled in OpenAM and how the
documentation for them is generated. Dynamic generation includes descriptions from any custom
services and authentication modules you may have added. Static generation only includes services
and authentication modules that were present when OpenAM was built. Note that dynamic documentation
generation may not work in some application containers.",

}
```

1.165. RetryLimitDecision

1.165.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/RetryLimitDecisionNode`

Resource version: `1.0`

1.165.1.1. create

Usage:

```
am> create RetryLimitDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "incrementUserAttributeOnFailure" : {
      "title" : "Save Retry Limit to User",
      "description" : "If true the number of failures will be persisted beyond the scope of the
execution of this tree by saving them to an attribute on the user. If no user can be identified as
part of the tree context then the execution of the tree will end with an error. If this is false then
failures will be only be stored in the context of the current tree execution and will be lost if the
tree execution is restarted.",
      "propertyOrder" : 200,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "retryLimit" : {
      "title" : "Retry Limit",
      "description" : "The number of times to allow a retry.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "retryLimit", "incrementUserAttributeOnFailure" ]
}
```

1.165.1.2. delete

Usage:

```
am> delete RetryLimitDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.165.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action RetryLimitDecision --realm Realm --actionName getAllTypes
```

1.165.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action RetryLimitDecision --realm Realm --actionName getCreatableTypes
```

1.165.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action RetryLimitDecision --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.165.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action RetryLimitDecision --realm Realm --actionName nextdescendents
```

1.165.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query RetryLimitDecision --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.165.1.8. read

Usage:

```
am> read RetryLimitDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.165.1.9. update

Usage:

```
am> update RetryLimitDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "incrementUserAttributeOnFailure" : {
      "title" : "Save Retry Limit to User",
      "description" : "If true the number of failures will be persisted beyond the scope of the
 execution of this tree by saving them to an attribute on the user. If no user can be identified as
 part of the tree context then the execution of the tree will end with an error. If this is false then
 failures will be only be stored in the context of the current tree execution and will be lost if the
 tree execution is restarted.",
      "propertyOrder" : 200,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "retryLimit" : {
      "title" : "Retry Limit",
      "description" : "The number of times to allow a retry.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "retryLimit", "incrementUserAttributeOnFailure" ]
}
```

1.166. SOAPSecurityTokenServices

1.166.1. Realm Operations

The SOAP STS endpoint is responsible for storing the configuration of instances of REST Security Token Services (STS). Available operations are create, read, update, delete, query, schema and template.

Resource path: /realm-config/services/sts/soap-sts

Resource version: 1.0

FORGEROCK

1.166.1.1. create

Usage:

```
am> create SOAPSecurityTokenServices --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "soapStsSaml2" : {
      "type" : "object",

          "title" : "Authentication Target Mappings",
          "description" : "Configuration of consumption of OpenAM's rest-authN<br><br>Each deployed
STS is configured with the authentication targets for each input token type for each supported
token transformation. For example, if the transformation OPENIDCONNECT->SAML2 is supported, the
STS instance must be configured with information specifying which elements of the OpenAM restful
authentication context needs to be consumed to validate the OPENIDCONNECT token. The elements
of the configuration tuple are separated by '|'. <br>The first element is the input token type
in the token transform: i.e. X509, OPENIDCONNECT, USERNAME, or OPENAM. The second element is the
authentication target - i.e. either 'module' or 'service', and the third element is the name of
the authentication module or service. The fourth (optional) element provides the STS authentication
```

context information about the to-be-consumed authentication context. <r>When transforming OpenID
Connect Id tokens, the OpenID Connect authentication module must be consumed, and thus a deployed
rest-sts instance must be configured with the name of the header/cookie element where the OpenID
Connect Id token will be placed. For this example, the following string would define these
configurations: <code>OPENIDCONNECT|module|oidc|oidc_id_token_auth_target_header_key=oidc_id_token</
code>. In this case, 'oidc' is the name of the OpenID Connect authentication module created to
authenticate OpenID Connect tokens.
When transforming a X509 Certificate, the Certificate
module must be consumed, and the published rest-sts instance must be configured with the name of
the Certificate module (or the service containing the module), and the header name configured for
the Certificate module corresponding to where the Certificate module can expect to find the to-be-
validated Certificate. The following string would define these configurations: <code>X509|module|
cert_module|x509_token_auth_target_header_key=client_cert</code>. In this case 'cert_module' is the
name of the Certificate module, and client_cert is the header name where Certificate module has been
configured to find the client's Certificate.",

      }
    }
  }
}
```

1.166.1.2. delete

Usage:

```
am> delete SOAPSecurityTokenServices --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.166.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SOAPSecurityTokenServices --realm Realm --actionName getAllTypes
```

1.166.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SOAPSecurityTokenServices --realm Realm --actionName getCreatableTypes
```

1.166.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SOAPSecurityTokenServices --realm Realm --actionName nextdescendents
```

1.166.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SOAPSecurityTokenServices --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.166.1.7. read

Usage:

```
am> read SOAPSecurityTokenServices --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.166.1.8. update

Usage:

```
am> update SOAPSecurityTokenServices --realm Realm --id id --body body
```

Parameters:

`--id`

    The unique identifier for the resource.

`--body`

    The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {

        "deployment-auth-target-mappings" : {
          "title" : "Authentication Target Mappings",
          "description" : "Configuration of consumption of OpenAM's rest-authN<br><br>Each deployed
  STS is configured with the authentication targets for each input token type for each supported
  token transformation. For example, if the transformation OPENIDCONNECT->SAML2 is supported, the
  STS instance must be configured with information specifying which elements of the OpenAM restful
  authentication context needs to be consumed to validate the OPENIDCONNECT token. The elements
  of the configuration tuple are separated by '|'. <br>The first element is the input token type
  in the token transform: i.e. X509, OPENIDCONNECT, USERNAME, or OPENAM. The second element is the
  authentication target - i.e. either 'module' or 'service', and the third element is the name of
  the authentication module or service. The fourth (optional) element provides the STS authentication
  context information about the to-be-consumed authentication context. <r>When transforming OpenID
  Connect Id tokens, the OpenID Connect authentication module must be consumed, and thus a deployed
  rest-sts instance must be configured with the name of the header/cookie element where the OpenID
  Connect Id token will be placed. For this example, the following string would define these
  configurations: <code>OPENIDCONNECT|module|oidc|oidc_id_token_auth_target_header_key=oidc_id_token</
  code>. In this case, 'oidc' is the name of the OpenID Connect authentication module created to
  authenticate OpenID Connect tokens. <br>When transforming a X509 Certificate, the Certificate
  module must be consumed, and the published rest-sts instance must be configured with the name of
  the Certificate module (or the service containing the module), and the header name configured for
  the Certificate module corresponding to where the Certificate module can expect to find the to-be-
  validated Certificate. The following string would define these configurations: <code>X509|module|
```

cert_module|x509_token_auth_target_header_key=client_cert</code>. In this case 'cert_module' is the
 name of the Certificate module, and client_cert is the header name where Certificate module has been
 configured to find the client's Certificate.",

1.167. SaeModule

1.167.1. Realm Operations

Resource path: `/realm-config/authentication/modules/sae`

Resource version: `1.0`

1.167.1.1. create

Usage:

```
am> create SaeModule --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.167.1.2. delete

Usage:

```
am> delete SaeModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.167.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SaeModule --realm Realm --actionName getAllTypes
```

1.167.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SaeModule --realm Realm --actionName getCreatableTypes
```

1.167.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SaeModule --realm Realm --actionName nextdescendents
```

1.167.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SaeModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.167.1.7. read

Usage:

```
am> read SaeModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.167.1.8. update

Usage:

```
am> update SaeModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.167.2. Global Operations

Resource path: `/global-config/authentication/modules/sae`

Resource version: `1.0`

1.167.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SaeModule --global --actionName getAllTypes
```

1.167.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SaeModule --global --actionName getCreatableTypes
```

1.167.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SaeModule --global --actionName nextdescendents
```

1.167.2.4. read

Usage:

```
am> read SaeModule --global
```

1.167.2.5. update

Usage:

```
am> update SaeModule --global --body body
```

Parameters:

--body

>The resource in JSON format, described by the following JSON schema:
>
>```
>{
>  "type" : "object",
>  "properties" : {
>    "defaults" : {
>      "properties" : {
>        "authenticationLevel" : {
>          "title" : "Authentication Level",
>          "description" : "The authentication level associated with this module.<br><br>Each
> authentication module has an authentication level that can be used to indicate the level of security
> associated with the module; 0 is the lowest (and the default).",
>          "propertyOrder" : 100,
>          "required" : true,
>          "type" : "integer",
>          "exampleValue" : ""
>        }
>      },
>      "type" : "object",
>      "title" : "Realm Defaults"
>    }
>  }
>}
>```

1.168. Saml2Entity

1.168.1. Realm Operations

Resource path: `/realm-config/federation/entityproviders/saml2`

Resource version: `1.0`

1.168.1.1. create

Usage:

```
am> create Saml2Entity --realm Realm --id id --body body
```

Parameters:

--id

   The unique identifier for the resource.

--body

   The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "entityConfig" : {
      "title" : "Entity Configuration",
      "description" : "",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "metadata" : {
      "title" : "Metadata",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.168.1.2. delete

Usage:

```
am> delete Saml2Entity --realm Realm --id id
```

Parameters:

--id

   The unique identifier for the resource.

1.168.1.3. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Saml2Entity --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.168.1.4. read

Usage:

```
am> read Saml2Entity --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.168.1.5. update

Usage:

```
am> update Saml2Entity --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "entityConfig" : {
      "title" : "Entity Configuration",
      "description" : "",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "metadata" : {
      "title" : "Metadata",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,

```

1.169.1.2. delete

Usage:

```
am> delete Saml2Module --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.169.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Saml2Module --realm Realm --actionName getAllTypes
```

1.169.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Saml2Module --realm Realm --actionName getCreatableTypes
```

1.169.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Saml2Module --realm Realm --actionName nextdescendents
```

1.169.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Saml2Module --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.169.1.7. read

Usage:

```
am> read Saml2Module --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.169.1.8. update

Usage:

```
am> update Saml2Module --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authComparison" : {
      "title" : "Comparison Type",
      "description" : "(Optional) Use this parameter to specify a comparison method to evaluate the

```

1.169.2. Global Operations

Resource path: `/global-config/authentication/modules/authSaml`

Resource version: `1.0`

1.169.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Saml2Module --global --actionName getAllTypes
```

1.169.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Saml2Module --global --actionName getCreatableTypes
```

1.169.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Saml2Module --global --actionName nextdescendents
```

1.169.2.4. read

Usage:

```
am> read Saml2Module --global
```

1.169.2.5. update

Usage:

```
am> update Saml2Module --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "authnContextDeclRef" : {

 }
}
```

1.170. SamlV2ServiceConfiguration

1.170.1. Realm Operations

Resource path: `/realm-config/services/saml2`

Resource version: `1.0`

1.170.1.1. create

Usage:

```
am> create SamlV2ServiceConfiguration --realm Realm --body body
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "metadataSigningKeyPass" : {
      "title" : "Metadata signing key password",
      "description" : "Specify the password used to retrieve the signing key from the keystore.",
      "propertyOrder" : 1500,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "metadataSigningKey" : {
      "title" : "Metadata signing key alias",
      "description" : "Specify the private key alias to be used to sign the given entity's metadata
 when requesting signed metadata, either by using exportmetadata.jsp or the <code>ssoadm</code>
 command.",
      "propertyOrder" : 1400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.170.1.2. delete

Usage:

```
am> delete SamlV2ServiceConfiguration --realm Realm
```

1.170.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SamlV2ServiceConfiguration --realm Realm --actionName getAllTypes
```

1.170.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SamlV2ServiceConfiguration --realm Realm --actionName getCreatableTypes
```

1.170.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SamlV2ServiceConfiguration --realm Realm --actionName nextdescendents
```

1.170.1.6. read

Usage:

```
am> read SamlV2ServiceConfiguration --realm Realm
```

1.170.1.7. update

Usage:

```
am> update SamlV2ServiceConfiguration --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "metadataSigningKeyPass" : {
      "title" : "Metadata signing key password",

    },
    "metadataSigningKey" : {
      "title" : "Metadata signing key alias",
      "description" : "Specify the private key alias to be used to sign the given entity's metadata
 when requesting signed metadata, either by using exportmetadata.jsp or the <code>ssoadm</code>
 command.",
      "propertyOrder" : 1400,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.170.2. Global Operations

Resource path: `/global-config/services/saml2`

Resource version: `1.0`

1.170.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SamlV2ServiceConfiguration --global --actionName getAllTypes
```

1.170.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SamlV2ServiceConfiguration --global --actionName getCreatableTypes
```

1.170.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SamlV2ServiceConfiguration --global --actionName nextdescendents
```

1.170.2.4. read

Usage:

```
am> read SamlV2ServiceConfiguration --global
```

1.170.2.5. update

Usage:

```
am> update SamlV2ServiceConfiguration --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "cacheCleanupInterval" : {
      "title" : "Cache cleanup interval (in seconds)",
      "description" : "Time between cache cleanup operations, in seconds.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
```

```
    },
    "nameIDInfoAttribute" : {
      "title" : "Attribute name for Name ID information",
      "description" : "User entry attribute to store name identifier information.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "caCertValidation" : {
      "title" : "CA Certificate Validation",
      "description" : "If enabled, then validate CA certificates.",
      "propertyOrder" : 1100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "nameIDInfoKeyAttribute" : {
      "title" : "Attribute name for Name ID information key",
      "description" : "User entry attribute to store the name identifier key.",

1.171. SamlV2SoapBinding

1.171.1. Global Operations

Resource path: `/global-config/services/federation/saml2soapbinding`

Resource version: `1.0`

1.171.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SamlV2SoapBinding --global --actionName getAllTypes
```

1.171.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SamlV2SoapBinding --global --actionName getCreatableTypes
```

1.171.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SamlV2SoapBinding --global --actionName nextdescendents
```

1.171.1.4. read

Usage:

```
am> read SamlV2SoapBinding --global
```

1.171.1.5. update

Usage:

```
am> update SamlV2SoapBinding --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "requestHandlers" : {
      "title" : "Request Handler List",
      "description" : "List of handlers to deal with SAML v2.0 requests bound to SOAP. <p><p>The
 required format is: <code>key=<em>Meta Alias</em>|class=<em>Handler Class</em></code> <p><p>Set
 the <em>key</em> property for a request handler to the meta alias, and the <em>class</em>
 property to the name of the class that implements the handler.<p><p> For example: <code>key=/pdp|
class=com.sun.identity.xacml.plugins.XACMLAuthzDecisionQueryHandler</code>",
      "propertyOrder" : 100,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.172. ScriptStore

1.172.1. Realm Operations

Resource path: /realm-config/services/scripts

Resource version: 1.0

1.172.1.1. create

Usage:

```
am> create ScriptStore --realm Realm --id id --body body
```

Parameters:

`--id`

> The unique identifier for the resource.

`--body`

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "description" : {
      "title" : "Script description",
      "description" : "An optional text string to help identify the script",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "createdBy" : {
      "title" : "Created by",
      "description" : "A string containing the universal identifier DN of the subject that created the
script",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "language" : {
      "title" : "Script language",
      "description" : "The language the script is written in - JAVASCRIPT or GROOVY",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "lastModifiedBy" : {
      "title" : "Last modifier",
      "description" : "A string containing the universal identifier DN of the subject that most
recently updated the script. If the script has not been modified since it was created, this property
will have the same value as createdBy",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "context" : {
      "title" : "Script type",
      "description" : "The script type. Supported values are: POLICY_CONDITION : Policy Condition
AUTHENTICATION_SERVER_SIDE : Server-side Authentication  AUTHENTICATION_CLIENT_SIDE : Client-side
Authentication - Note Client-side scripts must be written in JavaScript OIDC_CLAIMS : OIDC Claims",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "creationDate" : {
      "title" : "Creation date",
      "description" : "An integer containing the creation date and time, in ISO 8601 format",
```

```
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "script" : {
      "title" : "Script",
      "description" : "The source code of the script. The source code is in UTF-8 format and encoded
into Base64",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "lastModifiedDate" : {
      "title" : "Last modification date",
      "description" : "A string containing the last modified date and time, in ISO 8601 format. If
the script has not been modified since it was created, this property will have the same value as
creationDate",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "name" : {
      "title" : "Script name",
      "description" : "The name provided for the script",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.172.1.2. delete

Usage:

```
am> delete ScriptStore --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.172.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ScriptStore --realm Realm --actionName getAllTypes
```

1.172.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ScriptStore --realm Realm --actionName getCreatableTypes
```

1.172.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ScriptStore --realm Realm --actionName nextdescendents
```

1.172.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ScriptStore --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.172.1.7. read

Usage:

```
am> read ScriptStore --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.172.1.8. update

Usage:

```
am> update ScriptStore --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "description" : {
      "title" : "Script description",
      "description" : "An optional text string to help identify the script",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "createdBy" : {
      "title" : "Created by",
      "description" : "A string containing the universal identifier DN of the subject that created the
script",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "language" : {
      "title" : "Script language",
      "description" : "The language the script is written in - JAVASCRIPT or GROOVY",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "lastModifiedBy" : {
      "title" : "Last modifier",
      "description" : "A string containing the universal identifier DN of the subject that most
recently updated the script. If the script has not been modified since it was created, this property
will have the same value as createdBy",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "context" : {
      "title" : "Script type",
      "description" : "The script type. Supported values are: POLICY_CONDITION : Policy Condition

      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "name" : {
      "title" : "Script name",
      "description" : "The name provided for the script",
      "propertyOrder" : 1000,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.173. ScriptTypes

1.173.1. Global Operations

Resource path: `/global-config/services/scripting/contexts`

Resource version: `1.0`

1.173.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ScriptTypes --global --actionName getAllTypes
```

1.173.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ScriptTypes --global --actionName getCreatableTypes
```

1.173.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ScriptTypes --global --actionName nextdescendents
```

1.173.1.4. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ScriptTypes --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.173.1.5. read

Usage:

```
am> read ScriptTypes --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.173.1.6. update

Usage:

```
am> update ScriptTypes --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaultScript" : {
      "title" : "Default Script",
      "description" : "The source code that is presented as the default when creating a new script of
 this type.",
      "propertyOrder" : 1200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "languages" : {
      "title" : "Scripting languages",
      "description" : "The language the script is written in.<br><br>This is used to determine how to
validate the script, as well as which engine to run the script within.",
      "propertyOrder" : 1100,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.174. ScriptedDecision

1.174.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/ScriptedDecisionNode`

Resource version: `1.0`

1.174.1.1. create

Usage:

```
am> create ScriptedDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "script" : {
      "title" : "Script",
      "description" : "The script to evaluate.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    },
    "outcomes" : {
      "title" : "Outcomes",
      "description" : "",
      "propertyOrder" : 200,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  },
  "required" : [ "script", "outcomes" ]
}
```

1.174.1.2. delete

Usage:

```
am> delete ScriptedDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.174.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ScriptedDecision --realm Realm --actionName getAllTypes
```

1.174.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ScriptedDecision --realm Realm --actionName getCreatableTypes
```

1.174.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action ScriptedDecision --realm Realm --body body --actionName listOutcomes
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.174.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ScriptedDecision --realm Realm --actionName nextdescendents
```

1.174.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ScriptedDecision --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.174.1.8. read

Usage:

```
am> read ScriptedDecision --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.174.1.9. update

Usage:

```
am> update ScriptedDecision --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "script" : {
      "title" : "Script",
      "description" : "The script to evaluate.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    },
    "outcomes" : {
      "title" : "Outcomes",
      "description" : "",
      "propertyOrder" : 200,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  },
  "required" : [ "script", "outcomes" ]
}
```

1.175. ScriptedModule

1.175.1. Realm Operations

Resource path: `/realm-config/authentication/modules/scripted`

Resource version: `1.0`

1.175.1.1. create

Usage:

```
am> create ScriptedModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with the authentication module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "clientScript" : {
      "title" : "Client-side Script",
      "description" : "The client-side script.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "serverScript" : {
      "title" : "Server-side Script",
      "description" : "The server-side script to execute.<br><br>This script will be run on the
 server, subsequent to any client script having returned.",
      "propertyOrder" : 300,
      "required" : true,
```

```
            "type" : "string",
            "exampleValue" : ""
        },
        "clientScriptEnabled" : {
            "title" : "Client-side Script Enabled",
            "description" : "Enable this setting if the client-side script should be executed.",
            "propertyOrder" : 100,
            "required" : true,
            "type" : "boolean",
            "exampleValue" : ""
        }
    }
}
```

1.175.1.2. delete

Usage:

```
am> delete ScriptedModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.175.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ScriptedModule --realm Realm --actionName getAllTypes
```

1.175.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ScriptedModule --realm Realm --actionName getCreatableTypes
```

1.175.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ScriptedModule --realm Realm --actionName nextdescendents
```

1.175.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ScriptedModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.175.1.7. read

Usage:

```
am> read ScriptedModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.175.1.8. update

Usage:

```
am> update ScriptedModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with the authentication module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default).",
      "propertyOrder" : 400,
      "required" : true,
```

```
      "type" : "integer",
      "exampleValue" : ""
    },
    "clientScript" : {
      "title" : "Client-side Script",
      "description" : "The client-side script.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "serverScript" : {
      "title" : "Server-side Script",
      "description" : "The server-side script to execute.<br><br>This script will be run on the
 server, subsequent to any client script having returned.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "clientScriptEnabled" : {
      "title" : "Client-side Script Enabled",
      "description" : "Enable this setting if the client-side script should be executed.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    }
  }
}
```

1.175.2. Global Operations

Resource path: `/global-config/authentication/modules/scripted`

Resource version: `1.0`

1.175.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ScriptedModule --global --actionName getAllTypes
```

1.175.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ScriptedModule --global --actionName getCreatableTypes
```

1.175.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ScriptedModule --global --actionName nextdescendents
```

1.175.2.4. read

Usage:

```
am> read ScriptedModule --global
```

1.175.2.5. update

Usage:

```
am> update ScriptedModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "serverScript" : {
          "title" : "Server-side Script",
          "description" : "The server-side script to execute.<br><br>This script will be run on the
 server, subsequent to any client script having returned.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with the authentication
 module.<br><br>Each authentication module has an authentication level that can be used to indicate
 the level of security associated with the module; 0 is the lowest (and the default).",
          "propertyOrder" : 400,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "clientScript" : {
          "title" : "Client-side Script",
          "description" : "The client-side script.",
```

```
          "propertyOrder" : 200,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "clientScriptEnabled" : {
          "title" : "Client-side Script Enabled",
          "description" : "Enable this setting if the client-side script should be executed.",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.176. Scripting

1.176.1. Global Operations

Resource path: `/global-config/services/scripting`

Resource version: `1.0`

1.176.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Scripting --global --actionName getAllTypes
```

1.176.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Scripting --global --actionName getCreatableTypes
```

1.176.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Scripting --global --actionName nextdescendents
```

1.176.1.4. read

Usage:

```
am> read Scripting --global
```

1.176.1.5. update

Usage:

```
am> update Scripting --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaultContext" : {
      "title" : "Default Script Type",
      "description" : "The default script context type when creating a new script.",
      "propertyOrder" : 900,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.177. ScriptingEngineConfiguration

1.177.1. Global Operations

Resource path: `/global-config/services/scripting/contexts/{contexts}/engineConfiguration`

Resource version: `1.0`

1.177.1.1. create

Usage:

```
am> create ScriptingEngineConfiguration --global --contexts contexts --body body
```

Parameters:

--contexts

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "coreThreads" : {
      "title" : "Core thread pool size",
      "description" : "The core size of the thread pool from which scripts will operate.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "whiteList" : {
      "title" : "Java class whitelist",
      "description" : "List of patterns of allowed Java classes that may be loaded/accessed by
scripts.<br><br>Each Java class accessed by a script must match at least one of these patterns. Use
'*' as a wildcard, e.g. <code>java.lang.*</code>",
      "propertyOrder" : 600,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "queueSize" : {
      "title" : "Thread pool queue size",
      "description" : "Size of queue to use for buffering script execution request when core pool is
at capacity.<br><br>Use -1 for an unbounded queue (this disables the maximum pool size setting). For
short, CPU-bound scripts, consider a small pool size and larger queue length. For I/O-bound scripts
(e.g., REST calls) consider a larger maximum pool size and a smaller queue. Not hot-swappable:
restart server for changes to take effect.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "idleTimeout" : {
      "title" : "Thread idle timeout (seconds)",
      "description" : "Length of time (in seconds) to wait before terminating threads.<br><br>Length
of time (in seconds) to wait before terminating threads that were started when the queue reached
capacity. Only applies to threads beyond the core pool size (up to the maximum size).",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
```

```
      "useSecurityManager" : {
        "title" : "Use system SecurityManager",
        "description" : "Indicates whether the system SecurityManager should also be consulted when
checking access to Java classes.<br><br>If enabled, then the checkPackageAccess method will be called
for each Java class accessed. If no SecurityManager is configured, then this has no effect.",
        "propertyOrder" : 800,
        "required" : true,
        "type" : "boolean",
        "exampleValue" : ""
    },
      "serverTimeout" : {
        "title" : "Server-side Script Timeout",
        "description" : "The maximum execution time any individual script should take on the server (in
seconds).<br><br>Server-side scripts will be forcibly stopped after this amount of execution time.",
        "propertyOrder" : 100,
        "required" : true,
        "type" : "integer",
        "exampleValue" : ""
    },
      "blackList" : {
        "title" : "Java class blacklist",
        "description" : "List of patterns of Java classes that must not be accessed by a
script.<br><br>This blacklist is applied after the whitelist to apply additional restrictions. For
instance you may whitelist java.lang.* and then blacklist java.lang.System and java.lang.Runtime. It
is recommended to always prefer specific whitelists where possible.",
        "propertyOrder" : 700,
        "required" : true,
        "items" : {
          "type" : "string"
        },
        "type" : "array",
        "exampleValue" : ""
    },
      "maxThreads" : {
        "title" : "Maximum thread pool size",
        "description" : "The maximum size of the thread pool from which scripts will operate.<br><br>New
threads will be created up to this size once the task queue reaches capacity. Has no effect if the
queue is unbounded.",
        "propertyOrder" : 300,
        "required" : true,
        "type" : "integer",
        "exampleValue" : ""
    }
  }
}
```

1.177.1.2. delete

Usage:

```
am> delete ScriptingEngineConfiguration --global --contexts contexts
```

Parameters:

--contexts

1.177.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ScriptingEngineConfiguration --global --contexts contexts --actionName getAllTypes
```

Parameters:

`--contexts`

1.177.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ScriptingEngineConfiguration --global --contexts contexts --actionName getCreatableTypes
```

Parameters:

`--contexts`

1.177.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ScriptingEngineConfiguration --global --contexts contexts --actionName nextdescendents
```

Parameters:

`--contexts`

1.177.1.6. read

Usage:

```
am> read ScriptingEngineConfiguration --global --contexts contexts
```

Parameters:

`--contexts`

1.177.1.7. update

Usage:

```
am> update ScriptingEngineConfiguration --global --contexts contexts --body body
```

Parameters:

--contexts

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "coreThreads" : {
      "title" : "Core thread pool size",
      "description" : "The core size of the thread pool from which scripts will operate.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "whiteList" : {
      "title" : "Java class whitelist",
      "description" : "List of patterns of allowed Java classes that may be loaded/accessed by

}
```

1.178. Scripts

1.178.1. Realm Operations

The script resources service is responsible for managing scripts used for client-side and server-side
scripted authentication, custom policy conditions, and handling OpenID Connect claims. Scripts

are represented in JSON and take the following form. Scripts are built from standard JSON objects and values (strings, numbers, objects, sets, arrays, true, false, and null). Each script has a system-generated universally unique identifier (UUID), which must be used when modifying existing scripts. Renaming a script will not affect the UUID

Resource path: `/scripts`

Resource version: `1.1`

1.178.1.1. create

Create a script in a realm. The value for script must be in UTF-8 format and then encoded into Base64.

Usage:

```
am> create Scripts --realm Realm --id id --body body
```

Parameters:

`--id`

> The unique identifier for the resource.

`--body`

> The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "Script resource endpoint json schema",
  "type" : "object",
  "title" : "Script resource schema",
  "properties" : {
    "_id" : {
      "title" : "Script unique ID",
      "description" : "A unique ID for a script configuration, provided by the server",
      "type" : "string"
    },
    "name" : {
      "title" : "Script name",
      "description" : "The name provided for the script",
      "type" : "string"
    },
    "description" : {
      "title" : "Script description",
      "description" : "An optional text string to help identify the script",
      "type" : "string"
    },
    "script" : {
      "title" : "Script",
      "description" : "The source code of the script. The source code is in UTF-8 format and encoded
  into Base64",
      "type" : "string"
```

```
    },
    "language" : {
      "title" : "Script language",
      "description" : "The language the script is written in - JAVASCRIPT or GROOVY",
      "type" : "string"
    },
    "context" : {
      "title" : "Script type",
      "description" : "The script type. Supported values are: POLICY_CONDITION : Policy Condition
AUTHENTICATION_SERVER_SIDE : Server-side Authentication  AUTHENTICATION_CLIENT_SIDE : Client-side
Authentication - Note Client-side scripts must be written in JavaScript OIDC_CLAIMS : OIDC Claims",
      "type" : "string"
    },
    "createdBy" : {
      "title" : "Created by",
      "description" : "A string containing the universal identifier DN of the subject that created the
script",
      "type" : "string"
    },
    "creationDate" : {
      "title" : "Creation date",
      "description" : "An integer containing the creation date and time, in ISO 8601 format",
      "type" : "number"
    },
    "lastModifiedBy" : {
      "title" : "Last modifier",
      "description" : "A string containing the universal identifier DN of the subject that most
recently updated the script. If the script has not been modified since it was created, this property
will have the same value as createdBy",
      "type" : "string"
    },
    "lastModifiedDate" : {
      "title" : "Last modification date",
      "description" : "A string containing the last modified date and time, in ISO 8601 format. If
the script has not been modified since it was created, this property will have the same value as
creationDate",
      "type" : "number"
    }
  },
  "required" : [ "name", "description", "script", "language", "context" ]
}
```

1.178.1.2. delete

Delete an individual script in a realm specified by the UUID parameter

Usage:

```
am> delete Scripts --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.178.1.3. query

List all the scripts in a realm, as well as any global scripts

Usage:

```
am> query Scripts --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

1.178.1.4. read

Read an individual script in a realm by specifying the UUID parameter

Usage:

```
am> read Scripts --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.178.1.5. update

Update an individual script in a realm specified by the UUID parameter

Usage:

```
am> update Scripts --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "Script resource endpoint json schema",
  "type" : "object",
  "title" : "Script resource schema",
  "properties" : {
    "_id" : {
      "title" : "Script unique ID",

      "title" : "Last modification date",
      "description" : "A string containing the last modified date and time, in ISO 8601 format. If
the script has not been modified since it was created, this property will have the same value as
creationDate",
      "type" : "number"
    }
  },
  "required" : [ "name", "description", "script", "language", "context" ]
}
```

1.178.1.6. validate

Validate a script. Include a JSON representation of the script and the script language, JAVASCRIPT or GROOVY, in the POST data. The value for script must be in UTF-8 format and then encoded into Base64

Usage:

```
am> action Scripts --realm Realm --body body --actionName validate
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "Validate action request schema",
  "type" : "object",
  "title" : "Validate request schema",
  "properties" : {
    "script" : {
      "title" : "Script",
      "description" : "The source code of the script. The source code is in UTF-8 format and encoded
 into Base64",
      "type" : "string"
    },
    "language" : {
      "title" : "Script language",
      "description" : "The language the script is written in - JAVASCRIPT or GROOVY",
      "type" : "string"
    }
  },
  "required" : [ "script", "language" ]
}
```

1.179. SdkProperties

1.179.1. Global Operations

An object of property key-value pairs

Resource path: `/global-config/servers/{serverName}/properties/sdk`

Resource version: `1.0`

1.179.1.1. read

Usage:

```
am> read SdkProperties --global --serverName serverName
```

Parameters:

--serverName

An object of property key-value pairs

1.179.1.2. update

Usage:

```
am> update SdkProperties --global --serverName serverName --body body
```

Parameters:

--serverName

An object of property key-value pairs

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "amconfig.header.datastore" : {
      "title" : "Data Store",

1.180. SecretStores

1.180.1. Realm Operations

Services that provide sources of secret values

Resource path: `/realm-config/secrets/stores`

Resource version: `1.0`

1.180.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SecretStores --realm Realm --actionName getAllTypes
```

1.180.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SecretStores --realm Realm --actionName getCreatableTypes
```

1.180.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SecretStores --realm Realm --actionName nextdescendents
```

1.180.2. Global Operations

Services that provide sources of secret values

Resource path: `/global-config/secrets/stores`

Resource version: `1.0`

1.180.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SecretStores --global --actionName getAllTypes
```

1.180.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SecretStores --global --actionName getCreatableTypes
```

1.180.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SecretStores --global --actionName nextdescendents
```

1.181. Secrets

1.181.1. Realm Operations

Secrets represent cryptographic values such as private keys

Resource path: `/realm-config/secrets`

Resource version: `1.0`

1.181.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Secrets --realm Realm --actionName getAllTypes
```

1.181.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Secrets --realm Realm --actionName getCreatableTypes
```

1.181.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Secrets --realm Realm --actionName nextdescendents
```

1.181.2. Global Operations

Secrets represent cryptographic values such as private keys

Resource path: `/global-config/secrets`

Resource version: `1.0`

1.181.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Secrets --global --actionName getAllTypes
```

1.181.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Secrets --global --actionName getCreatableTypes
```

1.181.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Secrets --global --actionName nextdescendents
```

1.182. SecurID

1.182.1. Realm Operations

Resource path: `/realm-config/authentication/modules/securid`

Resource version: `1.0`

1.182.1.1. create

Usage:

```
am> create SecurID --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default). ",
      "propertyOrder" : null,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "serverConfigPath" : {
      "title" : "ACE/Server Configuration Path",
      "description" : "The path to the ACE/Server configuration files",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.182.1.2. delete

Usage:

```
am> delete SecurID --realm Realm --id id
```

Parameters:

`--id`

> The unique identifier for the resource.

1.182.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SecurID --realm Realm --actionName getAllTypes
```

1.182.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SecurID --realm Realm --actionName getCreatableTypes
```

1.182.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SecurID --realm Realm --actionName nextdescendents
```

1.182.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SecurID --realm Realm --filter filter
```

Parameters:

`--filter`

> A CREST formatted query filter, where "true" will query all.

1.182.1.7. read

Usage:

```
am> read SecurID --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.182.1.8. update

Usage:

```
am> update SecurID --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default). ",
      "propertyOrder" : null,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "serverConfigPath" : {
      "title" : "ACE/Server Configuration Path",
      "description" : "The path to the ACE/Server configuration files",
      "propertyOrder" : null,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.182.2. Global Operations

Resource path: `/global-config/authentication/modules/securid`

Resource version: `1.0`

1.182.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SecurID --global --actionName getAllTypes
```

1.182.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SecurID --global --actionName getCreatableTypes
```

1.182.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SecurID --global --actionName nextdescendents
```

1.182.2.4. read

Usage:

```
am> read SecurID --global
```

1.182.2.5. update

Usage:

```
am> update SecurID --global --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "authenticationLevel" : {
          "title" : "Authentication Level",
          "description" : "The authentication level associated with this module.<br><br>Each
 authentication module has an authentication level that can be used to indicate the level of security
 associated with the module; 0 is the lowest (and the default). ",
          "propertyOrder" : null,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "serverConfigPath" : {
          "title" : "ACE/Server Configuration Path",
          "description" : "The path to the ACE/Server configuration files",
          "propertyOrder" : null,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Realm Defaults"
    }
  }
}
```

1.183. SecurityProperties

1.183.1. Global Operations

An object of property key-value pairs

Resource path: `/global-config/servers/{serverName}/properties/security`

Resource version: `1.0`

1.183.1.1. read

Usage:

```
am> read SecurityProperties --global --serverName serverName
```

Parameters:

--serverName

> An object of property key-value pairs

1.183.1.2. update

Usage:

```
am> update SecurityProperties --global --serverName serverName --body body
```

Parameters:

--serverName

An object of property key-value pairs

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "amconfig.header.encryption" : {
      "title" : "Encryption",

            }
          }
        }
      }
    }
}
```

1.184. SecurityTokenServices

1.184.1. Realm Operations

Security Token Services configuration

Resource path: `/realm-config/services/sts`

Resource version: `1.0`

1.184.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SecurityTokenServices --realm Realm --actionName getAllTypes
```

1.184.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SecurityTokenServices --realm Realm --actionName getCreatableTypes
```

1.184.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SecurityTokenServices --realm Realm --actionName nextdescendents
```

1.185. ServerInformation

1.185.1. Realm Operations

Provides information about the server.

Resource path: `/serverinfo`

Resource version: `1.1`

1.185.1.1. read

Read the server information.

Usage:

```
am> read ServerInformation --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.186. ServerVersion

1.186.1. Realm Operations

Server Version schema

Resource path: `/serverinfo/version`

Resource version: `1.0`

1.186.1.1. read

It returns information about OpenAM such as: version, revision and date

Usage:

```
am> read ServerVersion --realm Realm
```

1.187. Servers

1.187.1. Global Operations

Servers resource provider is responsible for managing Servers and their configuration for an OpenAM instance.

Resource path: `/global-config/servers`

Resource version: `1.0`

1.187.1.1. clone

Clone the specified Server, keeping it's settings but using a different URL.

Usage:

```
am> action Servers --global --body body --actionName clone
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Container for required data to clone a Server.",
  "type" : "object",
  "title" : "Clone Server Request schema",
  "properties" : {
    "clonedUrl" : {
      "type" : "string",
      "title" : "Cloned Server URL",
      "description" : "The new URL of the cloned server. Must be unique."
    }
  }
}
```

1.187.1.2. create

Create a Server.

Usage:

```
am> create Servers --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Describes the data that a Server Resource could contain.",
  "type" : "object",
  "title" : "Server resource schema",
  "properties" : {
    "_id" : {
      "type" : "string",
      "title" : "Server id",
      "description" : "Unique identifier of the Server."
    },
    "siteName" : {
      "type" : "string",
      "title" : "Site name",
      "description" : "The Server's name."
    },
    "url" : {
      "type" : "string",
      "title" : "Url",
      "description" : "The URL of the Server."
    }
  }
}
```

1.187.1.3. delete

Delete a Server.

Usage:

```
am> delete Servers --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.187.1.4. query

Query the collection of the Servers.

Usage:

```
am> query Servers --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

1.187.1.5. read

Read a Server.

Usage:

```
am> read Servers --global --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.188. Services

1.188.1. Realm Operations

The collection of services available on a realm.

Resource path: `/realm-config/services`

Resource version: `1.0`

1.188.1.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Services --realm Realm --actionName getAllTypes
```

1.188.1.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Services --realm Realm --actionName getCreatableTypes
```

1.188.1.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Services --realm Realm --actionName nextdescendents
```

1.188.1.4. query

Find services provisioned for the realm - query for a particular service by identifier, or request all services using `_queryFilter=true`

Usage:

```
am> query Services --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all. Fields that can be queried: [_id]

1.188.2. Global Operations

Global and default configuration for services

Resource path: `/global-config/services`

Resource version: `1.0`

1.188.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Services --global --actionName getAllTypes
```

1.188.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Services --global --actionName getCreatableTypes
```

1.188.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Services --global --actionName nextdescendents
```

1.189. Session

1.189.1. Realm Operations

Resource path: `/realm-config/services/session`

Resource version: `1.0`

1.189.1.1. create

Usage:

```
am> create Session --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "dynamic" : {
      "properties" : {
        "maxCachingTime" : {
          "title" : "Maximum Caching Time",
          "description" : "Maximum time that external clients of AM are recommended to cache the
 session for, in minutes.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "quotaLimit" : {
          "title" : "Active User Sessions",
          "description" : "Maximum number of concurrent CTS-based sessions OpenAM allows a user to
 have.",
          "propertyOrder" : 800,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "maxSessionTime" : {
          "title" : "Maximum Session Time",
          "description" : "Maximum time a session can remain valid before OpenAM requires the user to
 authenticate again, in minutes.",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "maxIdleTime" : {
```

```
            "title" : "Maximum Idle Time",
            "description" : "Maximum time a CTS-based session can remain idle before OpenAM requires the
  user to authenticate again, in minutes.",
            "propertyOrder" : 200,
            "required" : true,
            "type" : "integer",
            "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Dynamic Attributes"
    }
  }
}
```

1.189.1.2. delete

Usage:

```
am> delete Session --realm Realm
```

1.189.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Session --realm Realm --actionName getAllTypes
```

1.189.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Session --realm Realm --actionName getCreatableTypes
```

1.189.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Session --realm Realm --actionName nextdescendents
```

1.189.1.6. read

Usage:

```
am> read Session --realm Realm
```

1.189.1.7. update

Usage:

```
am> update Session --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "dynamic" : {
      "properties" : {
        "maxCachingTime" : {
          "title" : "Maximum Caching Time",
          "description" : "Maximum time that external clients of AM are recommended to cache the
  session for, in minutes.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "quotaLimit" : {
          "title" : "Active User Sessions",
          "description" : "Maximum number of concurrent CTS-based sessions OpenAM allows a user to
  have.",
          "propertyOrder" : 800,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "maxSessionTime" : {
          "title" : "Maximum Session Time",
          "description" : "Maximum time a session can remain valid before OpenAM requires the user to
  authenticate again, in minutes.",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "maxIdleTime" : {
          "title" : "Maximum Idle Time",
          "description" : "Maximum time a CTS-based session can remain idle before OpenAM requires the
  user to authenticate again, in minutes.",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Dynamic Attributes"
    }
```

```
    }
}
```

1.189.2. Global Operations

Resource path: `/global-config/services/session`

Resource version: `1.0`

1.189.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Session --global --actionName getAllTypes
```

1.189.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Session --global --actionName getCreatableTypes
```

1.189.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Session --global --actionName nextdescendents
```

1.189.2.4. read

Usage:

```
am> read Session --global
```

1.189.2.5. update

Usage:

```
am> update Session --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "stateless" : {
      "type" : "object",
      "title" : "Client-based Sessions",
      "propertyOrder" : 4,
      "properties" : {
        "openam-session-stateless-enable-session-blacklisting" : {
          "title" : "Enable Session Blacklisting",
          "description" : "Blacklists client-based sessions that log out.<br><br>We recommend enabling
this setting if the maximum session time is high. Blacklist state is stored in the Core Token Service
(CTS) token store until the session expires, in order to ensure that sessions cannot continue to be
used.",
          "propertyOrder" : 2600,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        },
        "statelessEncryptionRsaCertAlias" : {
          "title" : "Encryption RSA Certificate Alias",
          "description" : "Specifies the alias of a certificate containing a public/private key pair
that AM uses when encrypting a JWT. Specify an encryption certificate alias when using an Encryption
Algorithm Type of <code>RSA</code>.<br><br>The certificate is retrieved from the keystore referenced
by the <code>com.sun.identity.saml.xmlsig.keystore</code> property.",
          "propertyOrder" : 2300,

          "exampleValue" : ""
        },
        "statelessEncryptionType" : {
          "title" : "Encryption Algorithm",
          "description" : "Specifies the algorithm that AM uses to encrypt the JSON Web
 Token (JWT) containing the session content.<br><br>AM supports the following encryption
 algorithms:<ul><li><strong>NONE</strong>. No encryption is selected.</li><li><strong>RSA</
 strong>. Session content is encrypted with AES using a unique key. The key is then encrypted
 with an RSA public key and appended to the JWT.<p><p>AM supports the following padding modes,
 which you can set using the <code>org.forgerock.openam.session.stateless.rsa.padding</code>
 advanced property:<ul><li><code>RSA1_5</code>. RSA with PKCS#1 v1.5 padding.</li><li><code>RSA-
 OAEP</code>. RSA with optimal asymmetric encryption padding (OAEP) and SHA-1.</li><li><code>RSA-
 OAEP-256</code>. RSA with OAEP padding and SHA-256.</li></ul></li><li><strong>AES KeyWrapping</
 strong>. Session content is encrypted with AES using a unique key and is then wrapped using AES
 KeyWrap and the master key. This provides additional security, compared to RSA, at the cost
 of 128 or 256 bits (or 32 bytes) depending on the size of the master key. This method provides
 authenticated encryption, which removes the need for a separate signature and decreases the
 byte size of the JWT. See <a href=\"https://tools.ietf.org/html/rfc3394\" target=\"_blank\">RFC
 3394</a>.</li><li><strong>Direct AES Encryption</strong>.  Session content is encrypted with
 direct AES encryption with a symmetric key. This method provides authenticated encryption,
 which removes the need for a separate signature and decreases the byte size of the JWT. </li></
 ul><p><p><strong>Important</strong>: To prevent users from accidentally disabling all authentication
 support, which can be accomplished by disabling signing and not using an authenticated encryption
 mode, you must set the <code>org.forgerock.openam.session.stateless.signing.allownone</code> system
 property to <code>true</code> to turn off signing completely.",

1.190. SessionProperties

1.190.1. Global Operations

An object of property key-value pairs

Resource path: `/global-config/servers/{serverName}/properties/session`

Resource version: `1.0`

1.190.1.1. read

Usage:

```
am> read SessionProperties --global --serverName serverName
```

Parameters:

--serverName

An object of property key-value pairs

1.190.1.2. update

Usage:

```
am> update SessionProperties --global --serverName serverName --body body
```

Parameters:

--serverName

An object of property key-value pairs

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "amconfig.header.sessionthresholds" : {
      "title" : "Session Limits",
      "type" : "object",
      "propertyOrder" : 0,

1.191. SessionPropertyWhiteList

1.191.1. Realm Operations

Resource path: `/realm-config/services/amSessionPropertyWhitelist`

Resource version: `1.0`

1.191.1.1. create

Usage:

```
am> create SessionPropertyWhiteList --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "sessionPropertyWhitelist" : {
      "title" : "Whitelisted Session Property Names",
      "description" : "A list of properties that users may read, edit the value of, or delete from
 their session.<p><p> Adding properties to sessions can impact OpenAM's performance. Because there is
 no size constraint limiting the set of properties that you can add to sessions, and no limit on the
 number of session properties you can add, keep in mind that adding session properties can increase
 the load on an OpenAM deployment in the following areas: <ul><li>OpenAM server memory</li><li>OpenDJ
 storage</li><li>OpenDJ replication</li></ul><p>Protected attributes will NOT be allowed to be set,
 edited or deleted, even if they are included in this whitelist.",
      "propertyOrder" : 100,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.191.1.2. delete

Usage:

```
am> delete SessionPropertyWhiteList --realm Realm
```

1.191.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SessionPropertyWhiteList --realm Realm --actionName getAllTypes
```

1.191.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SessionPropertyWhiteList --realm Realm --actionName getCreatableTypes
```

1.191.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SessionPropertyWhiteList --realm Realm --actionName nextdescendents
```

1.191.1.6. read

Usage:

```
am> read SessionPropertyWhiteList --realm Realm
```

1.191.1.7. update

Usage:

```
am> update SessionPropertyWhiteList --realm Realm --body body
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "sessionPropertyWhitelist" : {
      "title" : "Whitelisted Session Property Names",
      "description" : "A list of properties that users may read, edit the value of, or delete from
their session.<p><p> Adding properties to sessions can impact OpenAM's performance. Because there is
no size constraint limiting the set of properties that you can add to sessions, and no limit on the

        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.191.2. Global Operations

Resource path: `/global-config/services/amSessionPropertyWhitelist`

Resource version: `1.0`

1.191.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SessionPropertyWhiteList --global --actionName getAllTypes
```

1.191.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SessionPropertyWhiteList --global --actionName getCreatableTypes
```

1.191.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SessionPropertyWhiteList --global --actionName nextdescendents
```

1.191.2.4. read

Usage:

```
am> read SessionPropertyWhiteList --global
```

1.191.2.5. update

Usage:

```
am> update SessionPropertyWhiteList --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "sessionPropertyWhitelist" : {

      "exampleValue" : ""
    },
    "iplanet-am-session-quota-limit" : {
      "title" : "Active User Sessions",
      "description" : "Maximum number of concurrent CTS-based sessions OpenAM allows a user to have.",
      "propertyOrder" : 800,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "iplanet-am-session-max-session-time" : {
      "title" : "Maximum Session Time",
      "description" : "Maximum time a session can remain valid before OpenAM requires the user to
authenticate again, in minutes.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "iplanet-am-session-max-caching-time" : {
      "title" : "Maximum Caching Time",
```

```
      "description" : "Maximum time that external clients of AM are recommended to cache the session
  for, in minutes.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.192.1.2. delete

Usage:

```
am> delete SessionUserService --realm Realm
```

1.192.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SessionUserService --realm Realm --user user --actionName getAllTypes
```

Parameters:

--user

1.192.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SessionUserService --realm Realm --user user --actionName getCreatableTypes
```

Parameters:

--user

1.192.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SessionUserService --realm Realm --user user --actionName nextdescendents
```

Parameters:

--user

1.192.1.6. read

Usage:

```
am> read SessionUserService --realm Realm
```

1.192.1.7. unassignServices

action.unassignServices.description

Usage:

```
am> action SessionUserService --realm Realm --body body --user user --actionName unassignServices
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "i18n:api-descriptor/UserServicesResource#schema.description",
  "type" : "object",
  "title" : "i18n:api-descriptor/UserServicesResource#schema.title",
  "properties" : {
    "serviceNames" : {
      "type" : "array",
      "title" : "i18n:api-descriptor/UserServicesResource#schema.servicename.title",
      "description" : "i18n:api-descriptor/UserServicesResource#schema.servicename.description",
      "items" : {
        "type" : "string"
      }
    }
  }
}
```

--user

1.192.1.8. update

Usage:

```
am> update SessionUserService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "iplanet-am-session-max-idle-time" : {
      "title" : "Maximum Idle Time",
      "description" : "Maximum time a CTS-based session can remain idle before OpenAM requires the
  user to authenticate again, in minutes.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "iplanet-am-session-quota-limit" : {
      "title" : "Active User Sessions",
      "description" : "Maximum number of concurrent CTS-based sessions OpenAM allows a user to have.",
      "propertyOrder" : 800,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "iplanet-am-session-max-session-time" : {
      "title" : "Maximum Session Time",
      "description" : "Maximum time a session can remain valid before OpenAM requires the user to
  authenticate again, in minutes.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "iplanet-am-session-max-caching-time" : {
      "title" : "Maximum Caching Time",
      "description" : "Maximum time that external clients of AM are recommended to cache the session
  for, in minutes.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.193. Sessions

1.193.1. Realm Operations

Represents Sessions that can queried via a REST interface.

Resource path: `/sessions`

Resource version: `4.0`

1.193.1.1. getSessionInfo

It reads and returns the information about the requested session.

Usage:

```
am> action Sessions --realm Realm --body body --actionName getSessionInfo
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Action request",
  "title" : "Action request",
  "type" : "object",
  "properties" : {
    "tokenId" : {
      "title" : "The tokenId",
      "description" : "The tokenId of the user you requests information for",
      "type" : "string"
    }
  },
  "required" : [ "tokenId" ]
}
```

1.193.1.2. getSessionInfoAndResetIdleTime

It reads and returns the information about the requested session. It also resets the session idle time.

Usage:

```
am> action Sessions --realm Realm --body body --actionName getSessionInfoAndResetIdleTime
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Action request",
  "title" : "Action request",
  "type" : "object",
  "properties" : {
    "tokenId" : {
      "title" : "The tokenId",
      "description" : "The tokenId of the user you requests information for",
      "type" : "string"
    }
  },
  "required" : [ "tokenId" ]
}
```

1.193.1.3. getSessionProperties

It reads and returns all of the whitelisted properties for the requested session.

Usage:

```
am> action Sessions --realm Realm --body body --actionName getSessionProperties
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Action request",
  "title" : "Action request",
  "type" : "object",
  "properties" : {
    "tokenId" : {
      "title" : "The tokenId",
      "description" : "The tokenId of the user you requests information for",
      "type" : "string"
    }
  },
  "required" : [ "tokenId" ]
}
```

1.193.1.4. logout

It does logout from OpenAM

Usage:

```
am> action Sessions --realm Realm --body body --actionName logout
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Action request",
  "title" : "Action request",
  "type" : "object",
  "properties" : {
    "tokenId" : {
      "title" : "The tokenId",
      "description" : "The tokenId of the user you requests information for",
      "type" : "string"
    }
  },
  "required" : [ "tokenId" ]
}
```

1.193.1.5. logoutByHandle

It logs out sessions based on the provided session handles.

Usage:

```
am> action Sessions --realm Realm --body body --actionName logoutByHandle
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Logout By Handle request",
  "type" : "object",
  "title" : "Logout By Handle request",
  "properties" : {
    "sessionHandles" : {
      "title" : "Session handles",
      "description" : "The array of session handles that needs to be invalidated.",
      "type" : "array",
      "items" : {
        "type" : "string"
      }
    }
  },
  "required" : [ "sessionHandles" ]
}
```

1.193.1.6. query

It queries all sessions using the provided query filter.

Usage:

```
am> query Sessions --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [username, realm]

1.193.1.7. refresh

Suggests to OpenAM that it should refresh this session (update it's latest access time and reset its idleTime to 0). This will only be obeyed if the time between the session's previous latest access time

and now is greater than the value configured for the server's Latest Access Time Update Frequency setting, which defaults to 60 seconds.

Usage:

```
am> action Sessions --realm Realm --body body --actionName refresh
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Action request",
  "title" : "Action request",
  "type" : "object",
  "properties" : {
    "tokenId" : {
      "title" : "The tokenId",
      "description" : "The tokenId of the user you requests information for",
      "type" : "string"
    }
  },
  "required" : [ "tokenId" ]
}
```

1.193.1.8. updateSessionProperties

It updates and returns all of the whitelisted properties for the requested session.

Usage:

```
am> action Sessions --realm Realm --body body --actionName updateSessionProperties
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Action request",
  "title" : "Action request",
  "type" : "object",
  "properties" : {
    "tokenId" : {
      "title" : "The tokenId",
      "description" : "The tokenId of the user you requests information for",
      "type" : "string"
    }
  },
  "required" : [ "tokenId" ]
}
```

1.193.1.9. validate

It checks that the specified SSO Token Id is valid or not. If there is any problem getting or validating the token which causes an exception the json response will be false. In addition if the token is expired then the json response will be set to false. Otherwise it will be set to true.

Usage:

```
am> action Sessions --realm Realm --body body --actionName validate
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Action request",
  "title" : "Action request",
  "type" : "object",
  "properties" : {
    "tokenId" : {
      "title" : "The tokenId",
      "description" : "The tokenId of the user you requests information for",
      "type" : "string"
    }
  },
  "required" : [ "tokenId" ]
}
```

1.194. SetPersistentCookie

1.194.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/SetPersistentCookieNode`

Resource version: `1.0`

1.194.1.1. create

Usage:

```
am> create SetPersistentCookie --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "maxLife" : {
      "title" : "Max Life",
      "description" : "The maximum length of time the persistent cookie is valid for, in hours.",
      "propertyOrder" : 200,
      "type" : "integer",
      "exampleValue" : ""
    },
    "useHttpOnlyCookie" : {
      "title" : "Use HTTP Only Cookie",
      "description" : "Sets the persistent cookie as \"HttpOnly\".",
      "propertyOrder" : 400,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "hmacSigningKey" : {
      "title" : "HMAC Signing Key",
      "description" : "Base64-encoded 256-bit key to use for HMAC signing of the cookie.",
      "propertyOrder" : 500,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "useSecureCookie" : {
      "title" : "Use Secure Cookie",
      "description" : "Sets the persistent cookie as \"Secure\".",
      "propertyOrder" : 300,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "persistentCookieName" : {
      "title" : "Persistent Cookie Name",
      "description" : "Sets the name of the persistent cookie.",
      "propertyOrder" : 600,
      "type" : "string",
      "exampleValue" : ""
    },
    "idleTimeout" : {
      "title" : "Idle Timeout",
      "description" : "The maximum idle time between requests before the cookie is invalidated, in
hours.",
      "propertyOrder" : 100,
      "type" : "integer",
      "exampleValue" : ""
    }
  },
  "required" : [ "maxLife", "idleTimeout", "useSecureCookie", "hmacSigningKey",
"persistentCookieName", "useHttpOnlyCookie" ]
```

```
}
```

1.194.1.2. delete

Usage:

```
am> delete SetPersistentCookie --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.194.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SetPersistentCookie --realm Realm --actionName getAllTypes
```

1.194.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SetPersistentCookie --realm Realm --actionName getCreatableTypes
```

1.194.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action SetPersistentCookie --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.194.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SetPersistentCookie --realm Realm --actionName nextdescendents
```

1.194.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SetPersistentCookie --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.194.1.8. read

Usage:

```
am> read SetPersistentCookie --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.194.1.9. update

Usage:

```
am> update SetPersistentCookie --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
```

```
   "properties" : {
     "maxLife" : {
       "title" : "Max Life",
       "description" : "The maximum length of time the persistent cookie is valid for, in hours.",
       "propertyOrder" : 200,
       "type" : "integer",
       "exampleValue" : ""
     },
     "useHttpOnlyCookie" : {
       "title" : "Use HTTP Only Cookie",
       "description" : "Sets the persistent cookie as \"HttpOnly\".",
       "propertyOrder" : 400,
       "type" : "boolean",
       "exampleValue" : ""
     },
     "hmacSigningKey" : {
       "title" : "HMAC Signing Key",
       "description" : "Base64-encoded 256-bit key to use for HMAC signing of the cookie.",
       "propertyOrder" : 500,
       "type" : "string",
       "format" : "password",
       "exampleValue" : ""
     },
     "useSecureCookie" : {
       "title" : "Use Secure Cookie",
       "description" : "Sets the persistent cookie as \"Secure\".",
       "propertyOrder" : 300,
       "type" : "boolean",
       "exampleValue" : ""
     },
     "persistentCookieName" : {
       "title" : "Persistent Cookie Name",
       "description" : "Sets the name of the persistent cookie.",
       "propertyOrder" : 600,
       "type" : "string",
       "exampleValue" : ""
     },
     "idleTimeout" : {
       "title" : "Idle Timeout",
       "description" : "The maximum idle time between requests before the cookie is invalidated, in
 hours.",
       "propertyOrder" : 100,
       "type" : "integer",
       "exampleValue" : ""
     }
   },
  "required" : [ "maxLife", "idleTimeout", "useSecureCookie", "hmacSigningKey",
 "persistentCookieName", "useHttpOnlyCookie" ]
}
```

1.195. SetSessionProperties

1.195.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/SetSessionPropertiesNode`

Resource version: `1.0`

1.195.1.1. create

Usage:

```
am> create SetSessionProperties --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "properties" : {
      "title" : "Properties",
      "description" : "The properties to set on the user's session if/when it is created.",
      "propertyOrder" : 100,
      "patternProperties" : {
        ".*" : {
          "type" : "string"
        }
      },
      "type" : "object",
      "exampleValue" : ""
    }
  },
  "required" : [ "properties" ]
}
```

1.195.1.2. delete

Usage:

```
am> delete SetSessionProperties --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.195.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SetSessionProperties --realm Realm --actionName getAllTypes
```

1.195.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SetSessionProperties --realm Realm --actionName getCreatableTypes
```

1.195.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action SetSessionProperties --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.195.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SetSessionProperties --realm Realm --actionName nextdescendents
```

1.195.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SetSessionProperties --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.195.1.8. read

Usage:

```
am> read SetSessionProperties --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.195.1.9. update

Usage:

```
am> update SetSessionProperties --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "properties" : {
>     "properties" : {
>       "title" : "Properties",
>       "description" : "The properties to set on the user's session if/when it is created.",
>       "propertyOrder" : 100,
>       "patternProperties" : {
>         ".*" : {
>           "type" : "string"
>         }
>       },
>       "type" : "object",
>       "exampleValue" : ""
>     }
>   },
>   "required" : [ "properties" ]
> }
> ```

FORGEROCK

1.196. SharedAgents

1.196.1. Realm Operations

Agents handler that is responsible for managing agents

Resource path: `/realm-config/agents/SharedAgent`

Resource version: `1.0`

1.196.1.1. create

Usage:

```
am> create SharedAgents --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "status" : {
      "title" : "Status",
      "description" : "Status of the agent configuration.",
      "propertyOrder" : 200,
      "type" : "object",
      "exampleValue" : "",
      "properties" : {
        "inherited" : {
          "type" : "boolean",
          "required" : true
        },
        "value" : {
          "type" : "string",
          "required" : true
        }
      }
    },
    "agentProfilesAllowedToRead" : {
      "title" : "Agent Profiles allowed to Read.",
      "description" : "",
      "propertyOrder" : 22600,
      "items" : {
        "type" : "string"
```

```
        },
        "type" : "object",
        "exampleValue" : "",
        "properties" : {
          "inherited" : {
            "type" : "boolean",
            "required" : true
          },
          "value" : {
            "type" : "array",
            "required" : true
          }
        }
      },
      "userpassword" : {
        "title" : "Password",
        "description" : "",
        "propertyOrder" : 100,
        "required" : true,
        "type" : "string",
        "format" : "password",
        "exampleValue" : ""
      },
      "cdssoRootUrl" : {
        "title" : "Agent Root URL for CDSSO",
        "description" : "The agent root URL for CDSSO. The valid value is in the following format:
<br>protocol://hostname:port/<br> The protocol represents the protocol used, such as http or https.
The hostname represents the host name of the machine on which the agent resides. The port represents
the port number on which the agent is installed. The slash following the port number is required.",
        "propertyOrder" : 22700,
        "items" : {
          "type" : "string"
        },
        "type" : "object",

          },
          "value" : {
            "type" : "array",
            "required" : true
          }
        }
      }
    }
  }
}
```

1.196.1.2. delete

Usage:

```
am> delete SharedAgents --realm Realm --id id
```

Parameters:

--id

>   The unique identifier for the resource.

1.196.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SharedAgents --realm Realm --actionName getAllTypes
```

1.196.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SharedAgents --realm Realm --actionName getCreatableTypes
```

1.196.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SharedAgents --realm Realm --actionName nextdescendents
```

1.196.1.6. query

Querying the agents of a specific type

Usage:

```
am> query SharedAgents --realm Realm --filter filter
```

Parameters:

--filter

>   A CREST formatted query filter, where "true" will query all.

1.196.1.7. read

Usage:

```
am> read SharedAgents --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.196.1.8. update

Usage:

```
am> update SharedAgents --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "status" : {
      "title" : "Status",
      "description" : "Status of the agent configuration.",

        }
      }
    }
  }
}
```

1.197. Sites

1.197.1. Global Operations

This version 1.0 sites service represents a Sites resource with CQ operations on the users collection and CRUDPA operations available for the site item. Items can have server version 1.0 subresources.

Resource path: `/global-config/sites`

Resource version: `1.0`

1.197.1.1. create

Create new site entry

Usage:

```
am> create Sites --global --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Site schema.",
  "type" : "object",
  "title" : "Site schema",
  "properties" : {
    "_id" : {
      "type" : "string",
      "title" : "Name",
      "description" : "Site name."
    },
    "id" : {
      "type" : "string",
      "title" : "Site id",
      "description" : "Site's unique identifier.",
      "javaName" : "siteId"
    },
    "url" : {
      "type" : "string",
      "title" : "Primary URL",
      "description" : "Site primary URL."
    },
    "secondaryURLs" : {
      "type" : "array",
      "title" : "Secondary URLs",
      "description" : "Secondary URLs for this site.",
      "items" : {
        "type" : "string"
      }
    },
    "servers" : {
      "type" : "array",
      "title" : "Assigned Servers",
      "description" : "Servers assigned to this site.",
      "items" : {
        "type" : "object",
        "properties" : {
          "id" : {
            "type" : "string",
```

```
          "title" : "Server id",
          "description" : "Server's unique identifier for the site."
        },
        "url" : {
          "type" : "string",
          "title" : "Server URL",
          "description" : "Server URL of the site"
        }
      }
    }
  }
}
}
```

1.197.1.2. delete

Delete site entry

Usage:

```
am> delete Sites --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.197.1.3. query

Query the collection of site entries

Usage:

```
am> query Sites --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [_id, url]

1.197.1.4. read

Read a site entry

Usage:

```
am> read Sites --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.197.1.5. schema

Sites schema action that returns the sites schema json

Usage:

```
am> action Sites --global --actionName schema
```

1.197.1.6. template

Sites template action that returns a template json object for site insert

Usage:

```
am> action Sites --global --actionName template
```

1.197.1.7. update

Update a site entry

Usage:

```
am> update Sites --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Site schema.",
  "type" : "object",
  "title" : "Site schema",
  "properties" : {
    "_id" : {
      "type" : "string",
      "title" : "Name",
      "description" : "Site name."
    },
    "id" : {
      "type" : "string",
      "title" : "Site id",
      "description" : "Site's unique identifier.",
```

```
        "javaName" : "siteId"
      },
      "url" : {
        "type" : "string",
        "title" : "Primary URL",
        "description" : "Site primary URL."
      },
      "secondaryURLs" : {
        "type" : "array",
        "title" : "Secondary URLs",
        "description" : "Secondary URLs for this site.",
        "items" : {
          "type" : "string"
        }
      },
      "servers" : {
        "type" : "array",
        "title" : "Assigned Servers",
        "description" : "Servers assigned to this site.",
        "items" : {
          "type" : "object",
          "properties" : {
            "id" : {
              "type" : "string",
              "title" : "Server id",
              "description" : "Server's unique identifier for the site."
            },
            "url" : {
              "type" : "string",
              "title" : "Server URL",
              "description" : "Server URL of the site"
            }
          }
        }
      }
    }
  }
}
```

1.198. SoapSTSAgentGroups

1.198.1. Realm Operations

Agent Groups handler that is responsible for managing agent groups

Resource path: `/realm-config/agents/groups/SoapSTSAgent`

Resource version: `1.0`

1.198.1.1. create

Usage:

```
am> create SoapSTSAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "publishServicePollInterval" : {
      "title" : "Poll Interval",
      "description" : "Interval, in seconds, to poll the sts publish service for newly-published SOAP
 STS instances.",
      "propertyOrder" : 26300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.198.1.2. delete

Usage:

```
am> delete SoapSTSAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.198.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SoapSTSAgentGroups --realm Realm --actionName getAllTypes
```

1.198.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SoapSTSAgentGroups --realm Realm --actionName getCreatableTypes
```

1.198.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SoapSTSAgentGroups --realm Realm --actionName nextdescendents
```

1.198.1.6. query

Querying the agent groups of a specific type

Usage:

```
am> query SoapSTSAgentGroups --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.198.1.7. read

Usage:

```
am> read SoapSTSAgentGroups --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.198.1.8. update

Usage:

```
am> update SoapSTSAgentGroups --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "publishServicePollInterval" : {
      "title" : "Poll Interval",
      "description" : "Interval, in seconds, to poll the sts publish service for newly-published SOAP
 STS instances.",
      "propertyOrder" : 26300,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.199. SoapStsAgents

1.199.1. Realm Operations

Agents handler that is responsible for managing agents

Resource path: `/realm-config/agents/SoapSTSAgent`

Resource version: `1.0`

1.199.1.1. create

Usage:

```
am> create SoapStsAgents --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "publishServicePollInterval" : {
      "title" : "Poll Interval",
```

```
      "description" : "Interval, in seconds, to poll the sts publish service for newly-published SOAP
  STS instances.",
      "propertyOrder" : 26300,
      "type" : "object",
      "exampleValue" : "",
      "properties" : {
        "inherited" : {
          "type" : "boolean",
          "required" : true
        },
        "value" : {
          "type" : "integer",
          "required" : true
        }
      }
    },
    "userpassword" : {
      "title" : "Password",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "agentgroup" : {
      "title" : "Group",
      "description" : "Add the agent to a group to allow inheritance of property values from the
  group. <br>Changing the group will update inherited property values. <br>Inherited property values
  are copied to the agent.",
      "propertyOrder" : 50,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.199.1.2. delete

Usage:

```
am> delete SoapStsAgents --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.199.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SoapStsAgents --realm Realm --actionName getAllTypes
```

1.199.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SoapStsAgents --realm Realm --actionName getCreatableTypes
```

1.199.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SoapStsAgents --realm Realm --actionName nextdescendents
```

1.199.1.6. query

Querying the agents of a specific type

Usage:

```
am> query SoapStsAgents --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.199.1.7. read

Usage:

```
am> read SoapStsAgents --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.199.1.8. update

Usage:

```
am> update SoapStsAgents --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "publishServicePollInterval" : {
      "title" : "Poll Interval",
      "description" : "Interval, in seconds, to poll the sts publish service for newly-published SOAP
 STS instances.",
      "propertyOrder" : 26300,
      "type" : "object",
      "exampleValue" : "",
      "properties" : {
        "inherited" : {
          "type" : "boolean",
          "required" : true
        },
        "value" : {
          "type" : "integer",
          "required" : true
        }
      }
    },
    "userpassword" : {
      "title" : "Password",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "format" : "password",
      "exampleValue" : ""
    },
    "agentgroup" : {
      "title" : "Group",
      "description" : "Add the agent to a group to allow inheritance of property values from the
 group. <br>Changing the group will update inherited property values. <br>Inherited property values
 are copied to the agent.",
      "propertyOrder" : 50,
      "required" : false,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.200. SocialAuthInstagramModule

1.200.1. Realm Operations

Resource path: `/realm-config/authentication/modules/authSocialInstagram`

Resource version: `1.0`

1.200.1.1. create

Usage:

```
am> create SocialAuthInstagramModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "core" : {
      "type" : "object",
      "title" : "Core",

```

1.200.1.2. delete

Usage:

```
am> delete SocialAuthInstagramModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.200.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthInstagramModule --realm Realm --actionName getAllTypes
```

1.200.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthInstagramModule --realm Realm --actionName getCreatableTypes
```

1.200.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthInstagramModule --realm Realm --actionName nextdescendents
```

1.200.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SocialAuthInstagramModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.200.1.7. read

Usage:

```
am> read SocialAuthInstagramModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.200.1.8. update

Usage:

```
am> update SocialAuthInstagramModule --realm Realm --id id --body body
```

Parameters:

--id

>   The unique identifier for the resource.

--body

>   The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

1.200.2. Global Operations

Resource path: `/global-config/authentication/modules/authSocialInstagram`

Resource version: `1.0`

1.200.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthInstagramModule --global --actionName getAllTypes
```

1.200.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthInstagramModule --global --actionName getCreatableTypes
```

1.200.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthInstagramModule --global --actionName nextdescendents
```

1.200.2.4. read

Usage:

```
am> read SocialAuthInstagramModule --global
```

1.200.2.5. update

Usage:

```
am> update SocialAuthInstagramModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{

1.201. SocialAuthOAuth2Module

1.201.1. Realm Operations

Resource path: `/realm-config/authentication/modules/authSocialOAuth2`

Resource version: `1.0`

1.201.1.1. create

Usage:

```
am> create SocialAuthOAuth2Module --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "core" : {
      "type" : "object",
      "title" : "Core",
      "propertyOrder" : 0,

```

1.201.1.2. delete

Usage:

```
am> delete SocialAuthOAuth2Module --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.201.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthOAuth2Module --realm Realm --actionName getAllTypes
```

1.201.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthOAuth2Module --realm Realm --actionName getCreatableTypes
```

1.201.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthOAuth2Module --realm Realm --actionName nextdescendents
```

1.201.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SocialAuthOAuth2Module --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.201.1.7. read

Usage:

```
am> read SocialAuthOAuth2Module --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.201.1.8. update

Usage:

```
am> update SocialAuthOAuth2Module --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "core" : {

1.201.2. Global Operations

Resource path: `/global-config/authentication/modules/authSocialOAuth2`

Resource version: `1.0`

1.201.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthOAuth2Module --global --actionName getAllTypes
```

1.201.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthOAuth2Module --global --actionName getCreatableTypes
```

1.201.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthOAuth2Module --global --actionName nextdescendents
```

1.201.2.4. read

Usage:

```
am> read SocialAuthOAuth2Module --global
```

1.201.2.5. update

Usage:

```
am> update SocialAuthOAuth2Module --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "core" : {

1.202. SocialAuthOpenIDModule

1.202.1. Realm Operations

Resource path: `/realm-config/authentication/modules/authSocialOpenID`

Resource version: 1.0

1.202.1.1. create

Usage:

```
am> create SocialAuthOpenIDModule --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "accountProvisioning" : {
      "type" : "object",
      "title" : "Account Provisioning",
      "propertyOrder" : 2,

```

1.202.1.2. delete

Usage:

```
am> delete SocialAuthOpenIDModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.202.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthOpenIDModule --realm Realm --actionName getAllTypes
```

1.202.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthOpenIDModule --realm Realm --actionName getCreatableTypes
```

1.202.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthOpenIDModule --realm Realm --actionName nextdescendents
```

1.202.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SocialAuthOpenIDModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.202.1.7. read

Usage:

```
am> read SocialAuthOpenIDModule --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.202.1.8. update

Usage:

```
am> update SocialAuthOpenIDModule --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "accountProvisioning" : {

1.202.2. Global Operations

Resource path: `/global-config/authentication/modules/authSocialOpenID`

Resource version: 1.0

1.202.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthOpenIDModule --global --actionName getAllTypes
```

1.202.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthOpenIDModule --global --actionName getCreatableTypes
```

1.202.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthOpenIDModule --global --actionName nextdescendents
```

1.202.2.4. read

Usage:

```
am> read SocialAuthOpenIDModule --global
```

1.202.2.5. update

Usage:

```
am> update SocialAuthOpenIDModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "core" : {
```

```
        "type" : "object",
        "title" : "Core",

1.203. SocialAuthTwitterModule

1.203.1. Realm Operations

Resource path: `/realm-config/authentication/modules/authSocialTwitter`

Resource version: `1.0`

1.203.1.1. create

Usage:

```
am> create SocialAuthTwitterModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "core" : {
      "type" : "object",
      "title" : "Core",

```

1.203.1.2. delete

Usage:

```
am> delete SocialAuthTwitterModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.203.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthTwitterModule --realm Realm --actionName getAllTypes
```

1.203.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthTwitterModule --realm Realm --actionName getCreatableTypes
```

1.203.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthTwitterModule --realm Realm --actionName nextdescendents
```

1.203.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SocialAuthTwitterModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.203.1.7. read

Usage:

```
am> read SocialAuthTwitterModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.203.1.8. update

Usage:

```
am> update SocialAuthTwitterModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "core" : {
      "type" : "object",

```

1.203.2. Global Operations

Resource path: `/global-config/authentication/modules/authSocialTwitter`

Resource version: `1.0`

1.203.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthTwitterModule --global --actionName getAllTypes
```

1.203.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthTwitterModule --global --actionName getCreatableTypes
```

1.203.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthTwitterModule --global --actionName nextdescendents
```

1.203.2.4. read

Usage:

```
am> read SocialAuthTwitterModule --global
```

1.203.2.5. update

Usage:

```
am> update SocialAuthTwitterModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {

1.204. SocialAuthVKontakteModule

1.204.1. Realm Operations

Resource path: `/realm-config/authentication/modules/authSocialVk`

Resource version: `1.0`

1.204.1.1. create

Usage:

```
am> create SocialAuthVKontakteModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "core" : {
      "type" : "object",
      "title" : "Core",

```

1.204.1.2. delete

Usage:

```
am> delete SocialAuthVKontakteModule --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.204.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthVKontakteModule --realm Realm --actionName getAllTypes
```

1.204.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthVKontakteModule --realm Realm --actionName getCreatableTypes
```

1.204.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthVKontakteModule --realm Realm --actionName nextdescendents
```

1.204.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SocialAuthVKontakteModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.204.1.7. read

Usage:

```
am> read SocialAuthVKontakteModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.204.1.8. update

Usage:

```
am> update SocialAuthVKontakteModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "core" : {
      "type" : "object",
      "title" : "Core",

1.204.2. Global Operations

Resource path: `/global-config/authentication/modules/authSocialVk`

Resource version: `1.0`

1.204.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthVKontakteModule --global --actionName getAllTypes
```

1.204.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthVKontakteModule --global --actionName getCreatableTypes
```

1.204.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthVKontakteModule --global --actionName nextdescendents
```

1.204.2.4. read

Usage:

```
am> read SocialAuthVKontakteModule --global
```

1.204.2.5. update

Usage:

```
am> update SocialAuthVKontakteModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",

1.205. SocialAuthWeChatMobileModule

1.205.1. Realm Operations

Resource path: `/realm-config/authentication/modules/authSocialWeChatMobile`

Resource version: `1.0`

1.205.1.1. create

Usage:

```
am> create SocialAuthWeChatMobileModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "emailSettings" : {
      "type" : "object",
      "title" : "Email",
      "propertyOrder" : 2,
      "properties" : {
        "smtpPassword" : {
          "title" : "SMTP User Password",
          "description" : "The Password of the SMTP User Name",
          "propertyOrder" : 1935,
          "required" : true,
          "type" : "string",
          "format" : "password",
          "exampleValue" : ""
        },
```

```
        "smtpPort" : {
          "title" : "SMTP port",
          "description" : "The TCP port that will be used by the SMTP gateway",
          "propertyOrder" : 1925,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "smtpFromAddress" : {
          "title" : "SMTP From address",
          "description" : "The email address on behalf of whom the messages will be sent",
          "propertyOrder" : 1945,

1.205.1.2. delete

Usage:

```
am> delete SocialAuthWeChatMobileModule --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.205.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthWeChatMobileModule --realm Realm --actionName getAllTypes
```

1.205.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthWeChatMobileModule --realm Realm --actionName getCreatableTypes
```

1.205.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthWeChatMobileModule --realm Realm --actionName nextdescendents
```

1.205.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SocialAuthWeChatMobileModule --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.205.1.7. read

Usage:

```
am> read SocialAuthWeChatMobileModule --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.205.1.8. update

Usage:

```
am> update SocialAuthWeChatMobileModule --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

```

1.205.2. Global Operations

Resource path: `/global-config/authentication/modules/authSocialWeChatMobile`

Resource version: `1.0`

1.205.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthWeChatMobileModule --global --actionName getAllTypes
```

1.205.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthWeChatMobileModule --global --actionName getCreatableTypes
```

1.205.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthWeChatMobileModule --global --actionName nextdescendents
```

1.205.2.4. read

Usage:

```
am> read SocialAuthWeChatMobileModule --global
```

1.205.2.5. update

Usage:

```
am> update SocialAuthWeChatMobileModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {

1.206. SocialAuthWeChatModule

1.206.1. Realm Operations

Resource path: `/realm-config/authentication/modules/authSocialWeChat`

Resource version: `1.0`

1.206.1.1. create

Usage:

```
am> create SocialAuthWeChatModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

```

1.206.1.2. delete

Usage:

```
am> delete SocialAuthWeChatModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.206.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthWeChatModule --realm Realm --actionName getAllTypes
```

1.206.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthWeChatModule --realm Realm --actionName getCreatableTypes
```

1.206.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthWeChatModule --realm Realm --actionName nextdescendents
```

1.206.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SocialAuthWeChatModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.206.1.7. read

Usage:

```
am> read SocialAuthWeChatModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.206.1.8. update

Usage:

```
am> update SocialAuthWeChatModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "accountProvisioning" : {

1.206.2. Global Operations

Resource path: `/global-config/authentication/modules/authSocialWeChat`

Resource version: `1.0`

1.206.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthWeChatModule --global --actionName getAllTypes
```

1.206.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthWeChatModule --global --actionName getCreatableTypes
```

1.206.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthWeChatModule --global --actionName nextdescendents
```

1.206.2.4. read

Usage:

```
am> read SocialAuthWeChatModule --global
```

1.206.2.5. update

Usage:

```
am> update SocialAuthWeChatModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {

1.207. SocialAuthentication

1.207.1. Realm Operations

Resource path: `/realm-config/services/socialauthentication`

Resource version: `1.0`

1.207.1.1. create

Usage:

```
am> create SocialAuthentication --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "displayNames" : {
      "title" : "Display Names",
      "description" : "The display names for the implementations - this will be used to provide a name
 for the icon displayed on the login page. The key should be used across all the settings on this page
 to join them together.<br><br>For example:<table><tr><th>Key</th><th>Value</th></tr><tr><td>google</
td><td>Google</td></tr></table>",
      "propertyOrder" : 100,
      "required" : true,
      "patternProperties" : {
        ".*" : {
          "type" : "string"
        }
      },
      "type" : "object",
      "exampleValue" : ""
    },
    "authenticationChains" : {
      "title" : "Authentication Chains",
      "description" : "The name of the authentication chains that are the entry points to being
 authenticated by each respective social authentication provider. The key should correspond to a
 key used to define a Display Name above.<br><br>For example:<table><tr><th>Key</th><th>Value</th></
tr><tr><td>google</td><td>socialAuthChainGoogle</td></tr></table>",
      "propertyOrder" : 200,
      "required" : true,
      "patternProperties" : {
        ".*" : { }
      },
      "type" : "object",
      "exampleValue" : ""
    },
    "enabledKeys" : {
      "title" : "Enabled Implementations",
      "description" : "Provide a key that has been used to define the settings above to enable that
 set of settings.<br><br>For example: google",
      "propertyOrder" : 400,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "icons" : {
      "title" : "Icons",
      "description" : "Either a full URL or a path relative to the base of the site/server where the
 image can be found. The image will be used on the login page to link to the authentication chain
```

```
   defined above. The key should correspond to a key used to define a Display Name above.<br><br>For
   example:<table><tr><th>Key</th><th>Value</th></tr><tr><td>google</td><td>/images/google-sign-in.png</
td></tr></table>",
       "propertyOrder" : 300,
       "required" : true,
       "patternProperties" : {
         ".*" : {

         }
       },
       "type" : "object",
       "exampleValue" : ""
     }
   }
}
```

1.207.1.2. delete

Usage:

```
am> delete SocialAuthentication --realm Realm
```

1.207.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthentication --realm Realm --actionName getAllTypes
```

1.207.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthentication --realm Realm --actionName getCreatableTypes
```

1.207.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthentication --realm Realm --actionName nextdescendents
```

1.207.1.6. read

Usage:

```
am>  read SocialAuthentication --realm Realm
```

1.207.1.7. update

Usage:

```
am>  update SocialAuthentication --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "displayNames" : {
      "title" : "Display Names",

      "exampleValue" : ""
    }
  }
}
```

1.207.2. Global Operations

Resource path: `/global-config/services/socialauthentication`

Resource version: `1.0`

1.207.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialAuthentication --global --actionName getAllTypes
```

1.207.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialAuthentication --global --actionName getCreatableTypes
```

1.207.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialAuthentication --global --actionName nextdescendents
```

1.207.2.4. read

Usage:

```
am> read SocialAuthentication --global
```

1.207.2.5. update

Usage:

```
am> update SocialAuthentication --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "displayNames" : {

}
```

1.208.1.2. delete

Usage:

```
am> delete SocialFacebook --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.208.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialFacebook --realm Realm --actionName getAllTypes
```

1.208.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialFacebook --realm Realm --actionName getCreatableTypes
```

1.208.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action SocialFacebook --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "title" : "Some configuration of the node. This does not need to be complete against the
>  configuration schema."
> }
> ```

1.208.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialFacebook --realm Realm --actionName nextdescendents
```

1.208.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SocialFacebook --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.208.1.8. read

Usage:

```
am> read SocialFacebook --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.208.1.9. update

Usage:

```
am> update SocialFacebook --realm Realm --id id --body body
```

Parameters:

--id

>   The unique identifier for the resource.

--body

>   The resource in JSON format, described by the following JSON schema:

```

1.209.1.2. delete

Usage:

```
am> delete SocialGoogle --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.209.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialGoogle --realm Realm --actionName getAllTypes
```

1.209.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialGoogle --realm Realm --actionName getCreatableTypes
```

1.209.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action SocialGoogle --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.209.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialGoogle --realm Realm --actionName nextdescendents
```

1.209.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SocialGoogle --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.209.1.8. read

Usage:

```
am> read SocialGoogle --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.209.1.9. update

Usage:

```
am> update SocialGoogle --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "cfgAccountMapperConfiguration" : {
      "title" : "Account Mapper Configuration",

```

1.210. SocialIgnoreProfile

1.210.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/SocialOAuthIgnoreProfileNode`

Resource version: `1.0`

1.210.1.1. create

Usage:

```
am> create SocialIgnoreProfile --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.210.1.2. delete

Usage:

```
am> delete SocialIgnoreProfile --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.210.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SocialIgnoreProfile --realm Realm --actionName getAllTypes
```

1.210.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SocialIgnoreProfile --realm Realm --actionName getCreatableTypes
```

1.210.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action SocialIgnoreProfile --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.210.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SocialIgnoreProfile --realm Realm --actionName nextdescendents
```

1.210.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SocialIgnoreProfile --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.210.1.8. read

Usage:

```
am> read SocialIgnoreProfile --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.210.1.9. update

Usage:

```
am> update SocialIgnoreProfile --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.211. SoftwarePublisher

1.211.1. Realm Operations

Agents handler that is responsible for managing agents

Resource path: `/realm-config/agents/SoftwarePublisher`

Resource version: `1.0`

1.211.1.1. create

Usage:

```
am> create SoftwarePublisher --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jwkStoreCacheMissCacheTime" : {
      "title" : "JWKs URI content cache miss cache time",

}
```

1.211.1.2. delete

Usage:

```
am> delete SoftwarePublisher --realm Realm --id id
```

Parameters:

--id

  The unique identifier for the resource.

1.211.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SoftwarePublisher --realm Realm --actionName getAllTypes
```

1.211.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SoftwarePublisher --realm Realm --actionName getCreatableTypes
```

1.211.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SoftwarePublisher --realm Realm --actionName nextdescendents
```

1.211.1.6. query

Querying the agents of a specific type

Usage:

```
am> query SoftwarePublisher --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.211.1.7. read

Usage:

```
am> read SoftwarePublisher --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.211.1.8. update

Usage:

```
am> update SoftwarePublisher --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jwkStoreCacheMissCacheTime" : {
      "title" : "JWKs URI content cache miss cache time",

```

1.212. Splunk

1.212.1. Realm Operations

Resource path: `/realm-config/services/audit/Splunk`

Resource version: `1.0`

1.212.1.1. create

Usage:

```
am> create Splunk --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",
  "properties" : {
    "splunkConfig" : {
      "type" : "object",
      "title" : "Splunk Configuration",
      "propertyOrder" : 2,
      "properties" : {
        "host" : {
          "title" : "Server Hostname",
          "description" : "Host name or IP address of Splunk server.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "port" : {
          "title" : "Server Port",
          "description" : "Port number of Splunk server.",
          "propertyOrder" : 400,
          "required" : true,
          "type" : "integer",
          "exampleValue" : ""
        },
        "authzToken" : {
          "title" : "Authorization Token",
          "description" : "Authorization token used to connect to Splunk HTTP Event Collector
endpoint.",
          "propertyOrder" : null,
          "required" : true,
          "type" : "string",
          "format" : "password",
          "exampleValue" : ""
        },
        "sslEnabled" : {
          "title" : "SSL Enabled",
          "description" : "Use HTTPS protocol for communication with Splunk.",
          "propertyOrder" : 500,

        "properties" : {
          "handlerFactory" : {
            "title" : "Factory Class Name",
            "description" : "The fully qualified class name of the factory
responsible for creating the Audit Event Handler. The class must implement
<code>org.forgerock.openam.audit.AuditEventHandlerFactory</code>.",
            "propertyOrder" : null,
            "required" : true,
            "type" : "string",
            "exampleValue" : ""
          }
```

```
        }
      }
    }
}
```

1.212.1.2. delete

Usage:

```
am> delete Splunk --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.212.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Splunk --realm Realm --actionName getAllTypes
```

1.212.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Splunk --realm Realm --actionName getCreatableTypes
```

1.212.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Splunk --realm Realm --actionName nextdescendents
```

1.212.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Splunk --realm Realm --filter filter
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all.

1.212.1.7. read

Usage:

```
am> read Splunk --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.212.1.8. update

Usage:

```
am> update Splunk --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "properties" : {
>     "splunkConfig" : {
>       "type" : "object",
>       "title" : "Splunk Configuration",
>       "propertyOrder" : 2,
>       "properties" : {
>         "host" : {
>           "title" : "Server Hostname",
>           "description" : "Host name or IP address of Splunk server.",
>           "propertyOrder" : 300,
>           "required" : true,
>           "type" : "string",
>           "exampleValue" : ""
>         },
>         "port" : {
>           "title" : "Server Port",
>           "description" : "Port number of Splunk server.",
>           "propertyOrder" : 400,
>           "required" : true,
>           "type" : "integer",
> ```

```
          "exampleValue" : ""
        },
        "authzToken" : {

1.212.2. Global Operations

Resource path: `/global-config/services/audit/Splunk`

Resource version: `1.0`

1.212.2.1. create

Usage:

```
am> create Splunk --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonHandlerPlugin" : {
      "type" : "object",
      "title" : "Audit Event Handler Factory",
      "propertyOrder" : 1,
      "properties" : {
        "handlerFactory" : {
          "title" : "Factory Class Name",
          "description" : "The fully qualified class name of the factory
 responsible for creating the Audit Event Handler. The class must implement
 <code>org.forgerock.openam.audit.AuditEventHandlerFactory</code>.",
          "propertyOrder" : null,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      }
    },
    "commonHandler" : {
      "type" : "object",
      "title" : "General Handler Configuration",
      "propertyOrder" : 0,

        }
      }
    }
  }
}
```

1.212.2.2. delete

Usage:

```
am> delete Splunk --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.212.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Splunk --global --actionName getAllTypes
```

1.212.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Splunk --global --actionName getCreatableTypes
```

1.212.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Splunk --global --actionName nextdescendents
```

1.212.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Splunk --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.212.2.7. read

Usage:

```
am> read Splunk --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.212.2.8. update

Usage:

```
am> update Splunk --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonHandlerPlugin" : {
      "type" : "object",
      "title" : "Audit Event Handler Factory",
      "propertyOrder" : 1,
      "properties" : {
        "handlerFactory" : {
          "title" : "Factory Class Name",
```

```
                "description" : "The fully qualified class name of the factory
responsible for creating the Audit Event Handler. The class must implement
<code>org.forgerock.openam.audit.AuditEventHandlerFactory</code>.",
                "propertyOrder" : null,
                "required" : true,
                "type" : "string",
                "exampleValue" : ""
            }
        }
    },
    "commonHandler" : {

1.213. StateMetadata

1.213.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/MetadataNode`

Resource version: `1.0`

1.213.1.1. create

Usage:

```
am> create StateMetadata --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "attributes" : {
      "title" : "Attributes",
      "description" : "List of attributes that will be selected from the shared state (if they exist)
 and will be returned to the user-agent in a metadata callback.",
      "propertyOrder" : 100,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  },
  "required" : [ "attributes" ]
}
```

1.213.1.2. delete

Usage:

```
am> delete StateMetadata --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.213.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action StateMetadata --realm Realm --actionName getAllTypes
```

1.213.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action StateMetadata --realm Realm --actionName getCreatableTypes
```

1.213.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action StateMetadata --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.213.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action StateMetadata --realm Realm --actionName nextdescendents
```

1.213.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query StateMetadata --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.213.1.8. read

Usage:

```
am> read StateMetadata --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.213.1.9. update

Usage:

```
am> update StateMetadata --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "attributes" : {
      "title" : "Attributes",
      "description" : "List of attributes that will be selected from the shared state (if they exist)
 and will be returned to the user-agent in a metadata callback.",
      "propertyOrder" : 100,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  },
  "required" : [ "attributes" ]
}
```

1.214. SubjectAttributes

1.214.1. Realm Operations

Service for querying subject attributes stored in OpenAM. When you define a policy subject condition, the condition can depend on values of subject attributes stored in a user's profile. The list of possible subject attributes that you can use depends on the LDAP User Attributes configured for the Identity data store where OpenAM looks up the user's profile

Resource path: `/subjectattributes`

Resource version: `1.0`

1.214.1.1. query

Query the list of subject attributes stored in OpenAM

Usage:

```
am> query SubjectAttributes --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

1.215. SubjectTypes

1.215.1. Realm Operations

Service for querying and reading the subject types stored in OpenAM. Subject condition types describe the JSON representation of subject conditions that you can use in policy definitions

Resource path: `/subjecttypes`

Resource version: `1.0`

1.215.1.1. query

Query the list of subject condition types

Usage:

```
am> query SubjectTypes --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

1.215.1.2. read

Read an individual subject condition type by providing the unique identifier title

Usage:

```
am> read SubjectTypes --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.216. SuccessURL

1.216.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/SetSuccessUrlNode`

Resource version: 1.0

1.216.1.1. create

Usage:

```
am> create SuccessURL --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "successUrl" : {
      "title" : "Success URL",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "successUrl" ]
}
```

1.216.1.2. delete

Usage:

```
am> delete SuccessURL --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.216.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SuccessURL --realm Realm --actionName getAllTypes
```

1.216.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SuccessURL --realm Realm --actionName getCreatableTypes
```

1.216.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action SuccessURL --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.216.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SuccessURL --realm Realm --actionName nextdescendents
```

1.216.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SuccessURL --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.216.1.8. read

Usage:

```
am> read SuccessURL --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.216.1.9. update

Usage:

```
am> update SuccessURL --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "successUrl" : {
      "title" : "Success URL",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "successUrl" ]
}
```

1.217. SunDSWithOpenAMSchema

1.217.1. Realm Operations

Resource path: `/realm-config/services/id-repositories/LDAPv3ForAMDS`

Resource version: `1.0`

1.217.1.1. create

Usage:

```
am> create SunDSWithOpenAMSchema --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "cachecontrol" : {
      "type" : "object",
      "title" : "Cache Control",
      "propertyOrder" : 9,

```

1.217.1.2. delete

Usage:

```
am> delete SunDSWithOpenAMSchema --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.217.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SunDSWithOpenAMSchema --realm Realm --actionName getAllTypes
```

1.217.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SunDSWithOpenAMSchema --realm Realm --actionName getCreatableTypes
```

1.217.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SunDSWithOpenAMSchema --realm Realm --actionName nextdescendents
```

1.217.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SunDSWithOpenAMSchema --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.217.1.7. read

Usage:

```
am> read SunDSWithOpenAMSchema --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.217.1.8. update

Usage:

```
am> update SunDSWithOpenAMSchema --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "cachecontrol" : {
      "type" : "object",

Resource path: `/global-config/services/id-repositories/SupportedIdentities`

Resource version: `1.0`

1.218.1.1. create

Usage:

```
am> create SupportedIds --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
   "type" : "object"
}
```

1.218.1.2. delete

Usage:

```
am> delete SupportedIds --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.218.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action SupportedIds --global --actionName getAllTypes
```

1.218.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action SupportedIds --global --actionName getCreatableTypes
```

1.218.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action SupportedIds --global --actionName nextdescendents
```

1.218.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query SupportedIds --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.218.1.7. read

Usage:

```
am> read SupportedIds --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.218.1.8. update

Usage:

```
am> update SupportedIds --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object"
}
```

1.219. Syslog

1.219.1. Realm Operations

Resource path: `/realm-config/services/audit/Syslog`

Resource version: `1.0`

1.219.1.1. create

Usage:

```
am> create Syslog --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "sysLogBuffering" : {
      "type" : "object",

            "required" : true,
            "type" : "string",
            "exampleValue" : ""
          }
        }
      }
    }
  }
}
```

1.219.1.2. delete

Usage:

```
am> delete Syslog --realm *Realm* --id *id*
```

Parameters:

--id

The unique identifier for the resource.

1.219.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Syslog --realm *Realm* --actionName getAllTypes
```

1.219.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Syslog --realm Realm --actionName getCreatableTypes
```

1.219.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Syslog --realm Realm --actionName nextdescendents
```

1.219.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Syslog --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.219.1.7. read

Usage:

```
am> read Syslog --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.219.1.8. update

Usage:

```
am> update Syslog --realm Realm --id id --body body
```

Parameters:

`--id`

> The unique identifier for the resource.

`--body`

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "sysLogBuffering" : {
      "type" : "object",

1.219.2. Global Operations

Resource path: `/global-config/services/audit/Syslog`

Resource version: `1.0`

1.219.2.1. create

Usage:

```
am> create Syslog --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "commonHandlerPlugin" : {
      "type" : "object",
      "title" : "Audit Event Handler Factory",
      "propertyOrder" : 1,
      "properties" : {
        "handlerFactory" : {
          "title" : "Factory Class Name",
          "description" : "The fully qualified class name of the factory
 responsible for creating the Audit Event Handler. The class must implement
 <code>org.forgerock.openam.audit.AuditEventHandlerFactory</code>.",
          "propertyOrder" : 3000,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      }
    },
    "sysLogBuffering" : {
      "type" : "object",
      "title" : "Buffering",
```

```
        "propertyOrder" : 3,
        "properties" : {
          "bufferingEnabled" : {

            "required" : true,
            "items" : {
              "type" : "string"
            },
            "type" : "array",
            "exampleValue" : ""
          }
        }
      }
    }
  }
}
```

1.219.2.2. delete

Usage:

```
am> delete Syslog --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.219.2.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action Syslog --global --actionName getAllTypes
```

1.219.2.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action Syslog --global --actionName getCreatableTypes
```

1.219.2.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action Syslog --global --actionName nextdescendents
```

1.219.2.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query Syslog --global --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.219.2.7. read

Usage:

```
am> read Syslog --global --id id
```

Parameters:

--id

The unique identifier for the resource.

1.219.2.8. update

Usage:

```
am> update Syslog --global --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",
  "properties" : {
    "commonHandlerPlugin" : {
      "type" : "object",
      "title" : "Audit Event Handler Factory",
      "propertyOrder" : 1,
      "properties" : {
        "handlerFactory" : {
          "title" : "Factory Class Name",
          "description" : "The fully qualified class name of the factory
 responsible for creating the Audit Event Handler. The class must implement
<code>org.forgerock.openam.audit.AuditEventHandlerFactory</code>.",
          "propertyOrder" : 3000,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        }
      }
    },

```

1.220. TimerStart

1.220.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/TimerStartNode`

Resource version: `1.0`

1.220.1.1. create

Usage:

```
am> create TimerStart --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "startTimeProperty" : {
      "title" : "Start Time Property",
      "description" : "Identifier of property into which start time should be stored by this node.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "startTimeProperty" ]
}
```

1.220.1.2. delete

Usage:

```
am> delete TimerStart --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.220.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action TimerStart --realm Realm --actionName getAllTypes
```

1.220.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action TimerStart --realm Realm --actionName getCreatableTypes
```

1.220.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action TimerStart --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.220.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action TimerStart --realm Realm --actionName nextdescendents
```

1.220.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query TimerStart --realm Realm --filter filter
```

Parameters:

`--filter`

 A CREST formatted query filter, where "true" will query all.

1.220.1.8. read

Usage:

```
am> read TimerStart --realm Realm --id id
```

Parameters:

`--id`

 The unique identifier for the resource.

1.220.1.9. update

Usage:

```
am> update TimerStart --realm Realm --id id --body body
```

Parameters:

`--id`

 The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "startTimeProperty" : {
      "title" : "Start Time Property",
      "description" : "Identifier of property into which start time should be stored by this node.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "startTimeProperty" ]
}
```

1.221. TimerStop

1.221.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/TimerStopNode`

Resource version: `1.0`

1.221.1.1. create

Usage:

```
am> create TimerStop --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "metricKey" : {
      "title" : "Metric Key",
      "description" : "Identifier of metric to update when this node is processed.",
      "propertyOrder" : 200,
      "type" : "string",
      "exampleValue" : ""
    },
    "startTimeProperty" : {
      "title" : "Start Time Property",
      "description" : "Identifier of property in which start time should have been stored by a \"Timer
 Start\" node.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "metricKey", "startTimeProperty" ]
}
```

1.221.1.2. delete

Usage:

```
am> delete TimerStop --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.221.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action TimerStop --realm Realm --actionName getAllTypes
```

1.221.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action TimerStop --realm Realm --actionName getCreatableTypes
```

1.221.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action TimerStop --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.221.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action TimerStop --realm Realm --actionName nextdescendents
```

1.221.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query TimerStop --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.221.1.8. read

Usage:

```
am> read TimerStop --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.221.1.9. update

Usage:

```
am> update TimerStop --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "metricKey" : {
      "title" : "Metric Key",
      "description" : "Identifier of metric to update when this node is processed.",
      "propertyOrder" : 200,
      "type" : "string",
      "exampleValue" : ""
    },
    "startTimeProperty" : {
      "title" : "Start Time Property",
      "description" : "Identifier of property in which start time should have been stored by a \"Timer
 Start\" node.",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    }
  },
  "required" : [ "metricKey", "startTimeProperty" ]
}
```

1.222. TivoliDirectoryServer

1.222.1. Realm Operations

Resource path: `/realm-config/services/id-repositories/LDAPv3ForTivoli`

Resource version: `1.0`

1.222.1.1. create

Usage:

```
am> create TivoliDirectoryServer --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "groupconfig" : {
      "type" : "object",

```

1.222.1.2. delete

Usage:

```
am> delete TivoliDirectoryServer --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.222.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action TivoliDirectoryServer --realm Realm --actionName getAllTypes
```

1.222.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action TivoliDirectoryServer --realm Realm --actionName getCreatableTypes
```

1.222.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action TivoliDirectoryServer --realm Realm --actionName nextdescendents
```

1.222.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query TivoliDirectoryServer --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.222.1.7. read

Usage:

```
am> read TivoliDirectoryServer --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.222.1.8. update

Usage:

```
am> update TivoliDirectoryServer --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```json
{
  "type" : "object",

1.223. TransactionAuthentication

1.223.1. Realm Operations

Resource path: `/realm-config/services/transaction`

Resource version: `1.0`

1.223.1.1. create

Usage:

```
am> create TransactionAuthentication --realm Realm --body body
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "timeToLive" : {
      "title" : "Time to Live",
      "description" : "The number of seconds within which the transaction must be completed.",
      "propertyOrder" : 0,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.223.1.2. delete

Usage:

```
am> delete TransactionAuthentication --realm Realm
```

1.223.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action TransactionAuthentication --realm Realm --actionName getAllTypes
```

1.223.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action TransactionAuthentication --realm Realm --actionName getCreatableTypes
```

1.223.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action TransactionAuthentication --realm Realm --actionName nextdescendents
```

1.223.1.6. read

Usage:

```
am> read TransactionAuthentication --realm Realm
```

1.223.1.7. update

Usage:

```
am> update TransactionAuthentication --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "timeToLive" : {
      "title" : "Time to Live",
      "description" : "The number of seconds within which the transaction must be completed.",
      "propertyOrder" : 0,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.223.2. Global Operations

Resource path: `/global-config/services/transaction`

Resource version: `1.0`

1.223.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action TransactionAuthentication --global --actionName getAllTypes
```

1.223.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action TransactionAuthentication --global --actionName getCreatableTypes
```

1.223.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action TransactionAuthentication --global --actionName nextdescendents
```

1.223.2.4. read

Usage:

```
am> read TransactionAuthentication --global
```

1.223.2.5. update

Usage:

```
am> update TransactionAuthentication --global --body body
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:
>
> ```
> {
>   "type" : "object",
>   "properties" : {
>     "defaults" : {
>       "properties" : {
>         "timeToLive" : {
>           "title" : "Time to Live",
>           "description" : "The number of seconds within which the transaction must be completed.",
>           "propertyOrder" : 0,
>           "required" : true,
>           "type" : "string",
>           "exampleValue" : ""
>         }
>       },
>       "type" : "object",
>       "title" : "Realm Defaults"
>     }
>   }
> }
> ```

1.224. TrustedJwtIssuer

1.224.1. Realm Operations

Agents handler that is responsible for managing agents

Resource path: `/realm-config/agents/TrustedJwtIssuer`

Resource version: 1.0

1.224.1.1. create

Usage:

```
am> create TrustedJwtIssuer --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jwksCacheTimeout" : {
      "title" : "JWKs URI content cache timeout in ms",

          }
        }
      }
    }
  }
}
```

1.224.1.2. delete

Usage:

```
am> delete TrustedJwtIssuer --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.224.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action TrustedJwtIssuer --realm Realm --actionName getAllTypes
```

1.224.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action TrustedJwtIssuer --realm Realm --actionName getCreatableTypes
```

1.224.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action TrustedJwtIssuer --realm Realm --actionName nextdescendents
```

1.224.1.6. query

Querying the agents of a specific type

Usage:

```
am> query TrustedJwtIssuer --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.224.1.7. read

Usage:

```
am> read TrustedJwtIssuer --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.224.1.8. update

Usage:

```
am> update TrustedJwtIssuer --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "jwksCacheTimeout" : {
      "title" : "JWKs URI content cache timeout in ms",

```

1.225. TrustedUserDevices

1.225.1. Realm Operations

Trusted devices service is responsible for querying and deleting trusted devices.

Resource path: `/users/{user}/devices/trusted`

Resource version: `1.0`

1.225.1.1. delete

Delete trusted user device

Usage:

```
am> delete TrustedUserDevices --realm Realm --id id --user user
```

Parameters:

--id

The unique identifier for the resource.

--user

>   Trusted devices service is responsible for querying and deleting trusted devices.

1.225.1.2. query

Query trusted user devices

Usage:

```
am> query TrustedUserDevices --realm Realm --filter filter --user user
```

Parameters:

--filter

>   A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

--user

>   Trusted devices service is responsible for querying and deleting trusted devices.

1.226. UmaDataStoreProperties

1.226.1. Global Operations

An object of property key-value pairs

Resource path: `/global-config/servers/{serverName}/properties/uma`

Resource version: `1.0`

1.226.1.1. read

Usage:

```
am> read UmaDataStoreProperties --global --serverName serverName
```

Parameters:

--serverName

>   An object of property key-value pairs

1.226.1.2. update

Usage:

```

```

1.227. UmaPolicies

1.227.1. Realm Operations

Provides create, delete and query operations for UMA Policies

Resource path: `/users/{user}/uma/policies`

Resource version: `1.0`

1.227.1.1. create

Creates an UMA Policy

Usage:

```
am> create UmaPolicies --realm Realm --id id --body body --user user
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "A policy defining who can access a particular resource set",
  "type" : "object",
  "title" : "UMA Policy",
  "properties" : {
    "policyId" : {
      "type" : "string",
      "title" : "Policy ID",
      "description" : "The ID must correspond with an existing resource set ID"
    },
    "permissions" : {
      "type" : "array",
      "title" : "Permissions",
      "description" : "A list of subjects and the scopes they are allowed access to",
      "items" : {
        "type" : "object",
        "properties" : {
          "subject" : {
            "type" : "string",
            "title" : "Subject",
            "description" : "The username of the subject"
          },
          "scopes" : {
            "type" : "array",
            "title" : "Scopes",
            "description" : "The scopes that the user is allowed access to",
            "items" : {
              "type" : "string"
            }
          }
        }
      }
    }
  }
}
```

--user

Provides create, delete and query operations for UMA Policies

1.227.1.2. delete

Deletes an UMA Policy

Usage:

```
am> delete UmaPolicies --realm Realm --id id --user user
```

Parameters:

--id

The unique identifier for the resource.

--user

Provides create, delete and query operations for UMA Policies

1.227.1.3. query

Queries an UMA Policy

Usage:

```
am> query UmaPolicies --realm Realm --filter filter --user user
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

--user

Provides create, delete and query operations for UMA Policies

1.227.1.4. read

Reads an UMA Policy

Usage:

```
am> read UmaPolicies --realm Realm --id id --user user
```

Parameters:

--id

The unique identifier for the resource.

--user

Provides create, delete and query operations for UMA Policies

1.227.1.5. update

Updates an UMA Policy

Usage:

```
am> update UmaPolicies --realm Realm --id id --body body --user user
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "A policy defining who can access a particular resource set",
  "type" : "object",
  "title" : "UMA Policy",
  "properties" : {
    "policyId" : {
      "type" : "string",
      "title" : "Policy ID",
      "description" : "The ID must correspond with an existing resource set ID"
    },
    "permissions" : {
      "type" : "array",
      "title" : "Permissions",
      "description" : "A list of subjects and the scopes they are allowed access to",
      "items" : {
        "type" : "object",
        "properties" : {
          "subject" : {
            "type" : "string",
            "title" : "Subject",
            "description" : "The username of the subject"
          },
          "scopes" : {
            "type" : "array",
            "title" : "Scopes",
            "description" : "The scopes that the user is allowed access to",
            "items" : {
              "type" : "string"
            }
          }
        }
      }
    }
  }
}
```

--user

Provides create, delete and query operations for UMA Policies

1.228. UmaProvider

1.228.1. Realm Operations

Resource path: `/realm-config/services/uma`

Resource version: `1.0`

1.228.1.1. create

Usage:

```
am> create UmaProvider --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "emailResourceOwnerOnPendingRequestCreation" : {
      "title" : "Email Resource Owner on Pending Request creation",
      "description" : "Specifies whether to send an email to the Resource Owner when a Pending Request
 is created when a Requesting Party requests authorization to a resource.",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "pendingRequestsEnabled" : {
      "title" : "Pending Requests Enabled",
      "description" : "Specifies whether to use the Pending Requests subsystem that notifies the
resource owner that an attempt to access a resource was made.",
      "propertyOrder" : 450,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "userProfileLocaleAttribute" : {
      "title" : "User profile preferred Locale attribute",
      "description" : "User profile attribute storing the user's preferred locale.",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "resharingMode" : {
      "title" : "Re-Sharing Mode",
      "description" : "Specifies whether re-sharing is off or on implicitly for all users, allowing
 all users to re-share resources that have been shared with them.",
```

```
      "propertyOrder" : 800,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "emailRequestingPartyOnPendingRequestApproval" : {
      "title" : "Email Requesting Party on Pending Request approval",
      "description" : "Specifies whether to send an email to the Requesting Party when a Pending
Request is approved by the Resource Owner.",
      "propertyOrder" : 600,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "deletePoliciesOnDeleteRS" : {
      "title" : "Delete user policies when Resource Server is removed",
      "description" : "Delete all user policies that relate to a Resource Server when removing the
OAuth2 agent entry or removing the <code>uma_protection</code> scope from the OAuth2 agent.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "permissionTicketLifetime" : {
      "title" : "Permission Ticket Lifetime (seconds)",
      "description" : "The maximum life of a permission ticket before it expires, in seconds.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    },
    "grantRptConditions" : {
      "title" : "Grant RPTs...",
      "description" : "In UMA, scope comes from both the permission ticket and from the token request.
An RPT is always granted when all scope matches, and is never granted when no scope matches. You can
configure when RPTs are granted for partial match conditions here. For more information, see the UMA
Grant Type specification section onAuthorization Assessment and Results Determination.",
      "propertyOrder" : 900,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "deleteResourceSetsOnDeleteRS" : {
      "title" : "Delete resources when Resource Server is removed",
      "description" : "Delete all resources that relate to a Resource Server when removing the OAuth2
agent entry or removing the <code>uma_protection</code> scope from the OAuth2 agent.",
      "propertyOrder" : 400,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    }
  }
}
```

1.228.1.2. delete

Usage:

```
am> delete UmaProvider --realm Realm
```

1.228.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action UmaProvider --realm Realm --actionName getAllTypes
```

1.228.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action UmaProvider --realm Realm --actionName getCreatableTypes
```

1.228.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action UmaProvider --realm Realm --actionName nextdescendents
```

1.228.1.6. read

Usage:

```
am> read UmaProvider --realm Realm
```

1.228.1.7. update

Usage:

```
am> update UmaProvider --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "emailResourceOwnerOnPendingRequestCreation" : {
      "title" : "Email Resource Owner on Pending Request creation",
      "description" : "Specifies whether to send an email to the Resource Owner when a Pending Request
is created when a Requesting Party requests authorization to a resource.",
      "propertyOrder" : 500,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "pendingRequestsEnabled" : {
      "title" : "Pending Requests Enabled",
      "description" : "Specifies whether to use the Pending Requests subsystem that notifies the
resource owner that an attempt to access a resource was made.",
      "propertyOrder" : 450,
      "required" : true,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "userProfileLocaleAttribute" : {
      "title" : "User profile preferred Locale attribute",
      "description" : "User profile attribute storing the user's preferred locale.",
      "propertyOrder" : 700,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "resharingMode" : {
      "title" : "Re-Sharing Mode",
      "description" : "Specifies whether re-sharing is off or on implicitly for all users, allowing
all users to re-share resources that have been shared with them.",
      "propertyOrder" : 800,

      "exampleValue" : ""
    }
  }
}
```

1.228.2. Global Operations

Resource path: `/global-config/services/uma`

Resource version: `1.0`

1.228.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action UmaProvider --global --actionName getAllTypes
```

1.228.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action UmaProvider --global --actionName getCreatableTypes
```

1.228.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action UmaProvider --global --actionName nextdescendents
```

1.228.2.4. read

Usage:

```
am> read UmaProvider --global
```

1.228.2.5. update

Usage:

```
am> update UmaProvider --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "emailRequestingPartyOnPendingRequestApproval" : {
          "title" : "Email Requesting Party on Pending Request approval",
          "description" : "Specifies whether to send an email to the Requesting Party when a Pending
 Request is approved by the Resource Owner.",
          "propertyOrder" : 600,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        },
        "pendingRequestsEnabled" : {
          "title" : "Pending Requests Enabled",
          "description" : "Specifies whether to use the Pending Requests subsystem that notifies the
resource owner that an attempt to access a resource was made.",
          "propertyOrder" : 450,
          "required" : true,
          "type" : "boolean",
          "exampleValue" : ""
        },
```

```

          "type" : "integer",
          "exampleValue" : ""
      }
    },
    "type" : "object",
    "title" : "Realm Defaults"
    }
  }
}
```

1.229. UmaResourceSetLabels

1.229.1. Realm Operations

Provides create, delete and query operations for UMA resource set labels

Resource path: `/users/{user}/oauth2/resources/labels`

Resource version: `1.0`

1.229.1.1. create

Creates a UMA Resource Set Label

Usage:

```
am> create UmaResourceSetLabels --realm Realm --id id --body body --user user
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "Represents a UMA Resource Set Label",
  "id" : "urn:jsonschema:org:forgerock:openam:oauth2:resources:labels:ResourceSetLabel",
  "type" : "object",
  "title" : "UMA Resource Set Label",
  "properties" : {
    "id" : {
      "type" : "string",
      "description" : "The unique identifier of the resource set label",
      "title" : "Id"
    },
    "name" : {
      "type" : "string",
      "description" : "The displayed text of the label",
      "title" : "Name"
    },
    "type" : {
      "type" : "string",
      "description" : "The type of the label e.g. 'System'",
      "title" : "Type",
      "enum" : [ "STAR", "USER", "SYSTEM" ]
    },
    "resourceSetIds" : {
      "type" : "array",
      "items" : {
        "type" : "string"
      }
    }
  }
}
```

--user

Provides create, delete and query operations for UMA resource set labels

1.229.1.2. delete

Deletes a UMA Resource Set Label

Usage:

```
am> delete UmaResourceSetLabels --realm Realm --id id --user user
```

Parameters:

--id

The unique identifier for the resource.

--user

Provides create, delete and query operations for UMA resource set labels

1.229.1.3. query

Queries the collection of UMA labels

Usage:

```
am> query UmaResourceSetLabels --realm Realm --filter filter --user user
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

--user

Provides create, delete and query operations for UMA resource set labels

1.230. UmaUserAuditHistory

1.230.1. Realm Operations

Provides access to UMA auditing history for a user

Resource path: `/users/{user}/uma/auditHistory`

Resource version: `1.0`

1.230.1.1. getHistory

Returns the audit history of a user

Usage:

```
am> action UmaUserAuditHistory --realm Realm --user user --actionName getHistory
```

Parameters:

--user

Provides access to UMA auditing history for a user

1.230.1.2. query

Queries the collection of auditing history

Usage:

```
am> query UmaUserAuditHistory --realm Realm --filter filter --user user
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

--user

Provides access to UMA auditing history for a user

1.231. User

1.231.1. Realm Operations

Resource path: `/realm-config/services/user`

Resource version: `1.0`

1.231.1.1. create

Usage:

```
am> create User --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "dynamic" : {
      "properties" : {
        "preferredTimezone" : {
          "title" : "User Preferred Timezone",
          "description" : "Time zone for accessing OpenAM console.",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "defaultUserStatus" : {
          "title" : "Default User Status",
          "description" : "Inactive users cannot authenticate, though OpenAM stores their profiles.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
```

```
        },
        "adminDNStartingView" : {
          "title" : "Administrator DN Starting View",
          "description" : "Specifies the DN for the initial screen when the OpenAM administrator
  successfully logs in to the OpenAM console.",
          "propertyOrder" : 200,
          "required" : false,
          "type" : "string",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Dynamic Attributes"
    }
  }
}
```

1.231.1.2. delete

Usage:

```
am> delete User --realm Realm
```

1.231.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action User --realm Realm --actionName getAllTypes
```

1.231.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action User --realm Realm --actionName getCreatableTypes
```

1.231.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action User --realm Realm --actionName nextdescendents
```

1.231.1.6. read

Usage:

```
am> read User --realm Realm
```

1.231.1.7. update

Usage:

```
am> update User --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "dynamic" : {
      "properties" : {
        "preferredTimezone" : {
          "title" : "User Preferred Timezone",
          "description" : "Time zone for accessing OpenAM console.",
          "propertyOrder" : 100,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "defaultUserStatus" : {
          "title" : "Default User Status",
          "description" : "Inactive users cannot authenticate, though OpenAM stores their profiles.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "adminDNStartingView" : {
          "title" : "Administrator DN Starting View",
          "description" : "Specifies the DN for the initial screen when the OpenAM administrator
 successfully logs in to the OpenAM console.",
          "propertyOrder" : 200,
          "required" : false,
          "type" : "string",
          "exampleValue" : ""
        }
      },
      "type" : "object",
      "title" : "Dynamic Attributes"
    }
  }
}
```

1.231.2. Global Operations

Resource path: `/global-config/services/user`

Resource version: `1.0`

1.231.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action User --global --actionName getAllTypes
```

1.231.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action User --global --actionName getCreatableTypes
```

1.231.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action User --global --actionName nextdescendents
```

1.231.2.4. read

Usage:

```
am> read User --global
```

1.231.2.5. update

Usage:

```
am> update User --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
```

```
      "dynamic" : {
        "properties" : {
          "preferredTimezone" : {
            "title" : "User Preferred Timezone",
            "description" : "Time zone for accessing OpenAM console.",
            "propertyOrder" : 100,
            "required" : true,
            "type" : "string",
            "exampleValue" : ""
          },
          "adminDNStartingView" : {
            "title" : "Administrator DN Starting View",
            "description" : "Specifies the DN for the initial screen when the OpenAM administrator
 successfully logs in to the OpenAM console.",
            "propertyOrder" : 200,
            "required" : false,
            "type" : "string",
            "exampleValue" : ""
          },
          "defaultUserStatus" : {
            "title" : "Default User Status",
            "description" : "Inactive users cannot authenticate, though OpenAM stores their profiles.",
            "propertyOrder" : 300,
            "required" : true,
            "type" : "string",
            "exampleValue" : ""
          }
        },
        "type" : "object",
        "title" : "Dynamic Attributes"
      }
    }
}
```

1.232. UserGroups

1.232.1. Realm Operations

The User Groups resource allows an admin to query which groups a particular user belongs to. The only supported method is query

Resource path: `/users/{user}/groups`

Resource version: `1.0`

1.232.1.1. query

Query the user's groups

Usage:

```
am> query UserGroups --realm Realm --filter filter --user user
```

Parameters:

--filter

> A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

--user

> The User Groups resource allows an admin to query which groups a particular user belongs to. The only supported method is query

1.232.1.2. updateMemberships

Usage:
```
am> action UserGroups --realm Realm --body body --user user --actionName updateMemberships
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:
> ```
> {
>   "$schema" : "http://json-schema.org/draft-04/schema#",
>   "description" : "",
>   "title" : "User groups schema",
>   "type" : "object",
>   "properties" : {
>     "groups" : {
>       "type" : "array",
>       "title" : "Name",
>       "description" : "The name of the group",
>       "items" : {
>         "type" : "string"
>       }
>     }
>   }
> }
> ```

--user

> The User Groups resource allows an admin to query which groups a particular user belongs to. The only supported method is query

1.233. UserPolicies

1.233.1. Realm Operations

The User Policy resource endpoint is responsible for managing a user's policies. The available operations are create, read, update, delete, query. Policies are realm specific, hence the URI for the

policies API can contain a realm component. If the realm is not specified in the URI, the top level realm is used.

Resource path: `/users/{user}/policies`

Resource version: `1.0`

1.233.1.1. create

Create new policy

Usage:

```
am> create UserPolicies --realm Realm --id id --body body --user user
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Json schema for the policy resource",
  "title" : "Policy Resource Schema",
  "type" : "object",
  "properties" : {
    "name" : {
      "title" : "Name",
      "description" : "String matching the name of the application",
      "type" : "string"
    },
    "active" : {
      "title" : "Active flag",
      "description" : "Boolean indicating whether OpenAM considers the policy active for evaluation
 purposes, defaults to false",
      "type" : "boolean"
    },
    "description" : {
      "title" : "Description",
      "description" : "String describing the policy",
      "type" : "string"
    },
    "applicationName" : {
      "title" : "Application name",
      "description" : "String containing the application name, such as \"iPlanetAMWebAgentService\",
 or \"mypolicyset\"",
      "type" : "string"
    },
    "actionValues" : {
      "title" : "Action values",
```

```
      "description" : "Set of string action names, each set to a boolean indicating whether the action
is allowed. Chosen from the available actions provided by the associated Managing Resource Types
resource type",
      "type" : "object",
      "additionalProperties" : {
        "type" : "boolean"
      }
    },
    "resources" : {
      "title" : "Resources",

      }
    },
    "lastModifiedBy" : {
```

```
      "title" : "Last Modified By",
      "description" : "A string containing the universal identifier DN of the subject that most
recently updated the policy",
      "type" : "string"
    },
    "lastModifiedDate" : {
      "title" : "Last Modified date",
      "description" : "An integer containing the last modified date and time, in number of seconds",
      "type" : "string"
    },
    "createdBy" : {
      "title" : "Created By",
      "description" : "A string containing the universal identifier DN of the subject that created the
policy",
      "type" : "string"
    },
    "creationDate" : {
      "title" : "Creation Date",
      "description" : "An integer containing the creation date and time, in number of seconds",
      "type" : "string"
    }
  }
}
```

`--user`

The User Policy resource endpoint is responsible for managing a user's policies. The available operations are create, read, update, delete, query. Policies are realm specific, hence the URI for the policies API can contain a realm component. If the realm is not specified in the URI, the top level realm is used.

1.233.1.2. delete

Delete policy

Usage:

```
am> delete UserPolicies --realm Realm --id id --user user
```

Parameters:

`--id`

The unique identifier for the resource.

`--user`

The User Policy resource endpoint is responsible for managing a user's policies. The available operations are create, read, update, delete, query. Policies are realm specific, hence the URI for the policies API can contain a realm component. If the realm is not specified in the URI, the top level realm is used.

1.233.1.3. query

Query the stored policies

Usage:

```
am> query UserPolicies --realm Realm --filter filter --user user
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

--user

The User Policy resource endpoint is responsible for managing a user's policies. The available operations are create, read, update, delete, query. Policies are realm specific, hence the URI for the policies API can contain a realm component. If the realm is not specified in the URI, the top level realm is used.

1.233.1.4. read

Read policy

Usage:

```
am> read UserPolicies --realm Realm --id id --user user
```

Parameters:

--id

The unique identifier for the resource.

--user

The User Policy resource endpoint is responsible for managing a user's policies. The available operations are create, read, update, delete, query. Policies are realm specific, hence the URI for the policies API can contain a realm component. If the realm is not specified in the URI, the top level realm is used.

1.233.1.5. update

Update an existing policy

Usage:

```
am> update UserPolicies --realm Realm --id id --body body --user user
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "Json schema for the policy resource",
  "title" : "Policy Resource Schema",
  "type" : "object",
  "properties" : {
    "name" : {
      "title" : "Name",
      "description" : "String matching the name of the application",
      "type" : "string"
    },
    "active" : {
      "title" : "Active flag",
      "description" : "Boolean indicating whether OpenAM considers the policy active for evaluation
purposes, defaults to false",
      "type" : "boolean"
    },
    "description" : {
      "title" : "Description",
      "description" : "String describing the policy",
      "type" : "string"
    },
    "applicationName" : {
      "title" : "Application name",
      "description" : "String containing the application name, such as \"iPlanetAMWebAgentService\",
or \"mypolicyset\"",
      "type" : "string"
    },
    "actionValues" : {
      "title" : "Action values",
      "description" : "Set of string action names, each set to a boolean indicating whether the action
is allowed. Chosen from the available actions provided by the associated Managing Resource Types
resource type",
      "type" : "object",
      "additionalProperties" : {
        "type" : "boolean"
      }
    },
    "resources" : {
      "title" : "Resources",
      "description" : "List of the resource name pattern strings to which the policy applies. Must
conform to the pattern templates provided by the associated Managing Resource Types resource type",
      "type" : "array",
      "items" : {
        "type" : "string"
      }
    },
    "subject" : {
      "title" : "Subject",
```

```
      "description" : "Specifies the subject conditions to which the policy applies, where subjects
can be combined by using the built-in types \"AND\", \"OR\", and \"NOT\", and where subject
implementations are pluggable",

      "items" : {
        "type" : "object"
      }
    },
    "lastModifiedBy" : {
      "title" : "Last Modified By",
      "description" : "A string containing the universal identifier DN of the subject that most
recently updated the policy",
      "type" : "string"
    },
    "lastModifiedDate" : {
      "title" : "Last Modified date",
      "description" : "An integer containing the last modified date and time, in number of seconds",
      "type" : "string"
    },
    "createdBy" : {
      "title" : "Created By",
      "description" : "A string containing the universal identifier DN of the subject that created the
policy",
      "type" : "string"
    },
    "creationDate" : {
      "title" : "Creation Date",
      "description" : "An integer containing the creation date and time, in number of seconds",
```

```
      "type" : "string"
    }
  }
}
```

--user

> The User Policy resource endpoint is responsible for managing a user's policies. The available operations are create, read, update, delete, query. Policies are realm specific, hence the URI for the policies API can contain a realm component. If the realm is not specified in the URI, the top level realm is used.

1.234. UserRegistration

1.234.1. Realm Operations

Self Service endpoint for registering a new user

Resource path: `/selfservice/userRegistration`

Resource version: `1.0`

1.234.1.1. read

Initialise the user registration process.A set of requirements will be returned that will need to be fulfilled and sent to the submitRequirements action.

Usage:

```
am> read UserRegistration --realm Realm
```

1.234.1.2. submitRequirements

Submit some fulfilled requirements. Returns either a completion status, or a token along with some more requirements. If requirements are returned, they should be submitted with the token as a fresh request to this action.

Usage:

```
am> action UserRegistration --realm Realm --body body --actionName submitRequirements
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "The structure of a request to the submitRequirements action.",
  "type" : "object",
  "title" : "Submit requirements structure",
  "properties" : {
    "token" : {
      "type" : "string",
      "title" : "Token",
      "description" : "The token returned from the previous submitRequirements request."
    },
    "input" : {
      "type" : "object",
      "title" : "Input",
      "description" : "The input as collected from the new user. This object must conform to the JSON
 Schema of the requirements property from the last response.",
      "patternProperties" : {
        ".*" : {
          "type" : "any",
          "title" : "Input Property",
          "description" : "Valid content according to the received JSON Schema."
        }
      }
    }
  },
  "required" : [ "input" ]
}
```

1.235. UserSelfService

1.235.1. Realm Operations

Resource path: `/realm-config/services/selfService`

Resource version: `1.0`

1.235.1.1. create

Usage:

```
am> create UserSelfService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
```

```
    "forgottenPassword" : {
      "type" : "object",
      "title" : "Forgotten Password",

```

1.235.1.2. delete

Usage:

```
am> delete UserSelfService --realm Realm
```

1.235.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action UserSelfService --realm Realm --actionName getAllTypes
```

1.235.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action UserSelfService --realm Realm --actionName getCreatableTypes
```

1.235.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action UserSelfService --realm Realm --actionName nextdescendents
```

1.235.1.6. read

Usage:

```
am> read UserSelfService --realm Realm
```

1.235.1.7. update

Usage:

```
am> update UserSelfService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "forgottenPassword" : {
      "type" : "object",
      "title" : "Forgotten Password",

1.235.2. Global Operations

Resource path: `/global-config/services/selfService`

Resource version: `1.0`

1.235.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action UserSelfService --global --actionName getAllTypes
```

1.235.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action UserSelfService --global --actionName getCreatableTypes
```

1.235.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action UserSelfService --global --actionName nextdescendents
```

1.235.2.4. read

Usage:

```
am> read UserSelfService --global
```

1.235.2.5. update

Usage:

```
am> update UserSelfService --global --body body
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {

```

1.236. UserServices

1.236.1. Realm Operations

Resource path: `/users/{user}/services`

Resource version: `1.0`

1.236.1.1. create

Usage:

```
am> create UserServices --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object"
}
```

1.236.1.2. delete

Usage:

```
am> delete UserServices --realm Realm
```

1.236.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action UserServices --realm Realm --user user --actionName getAllTypes
```

Parameters:

--user

1.236.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action UserServices --realm Realm --user user --actionName getCreatableTypes
```

Parameters:

--user

1.236.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action UserServices --realm Realm --user user --actionName nextdescendents
```

Parameters:

--user

1.236.1.6. read

Usage:

```
am> read UserServices --realm Realm
```

1.236.1.7. unassignServices

action.unassignServices.description

Usage:

```
am> action UserServices --realm Realm --body body --user user --actionName unassignServices
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "description" : "i18n:api-descriptor/UserServicesResource#schema.description",
  "type" : "object",
  "title" : "i18n:api-descriptor/UserServicesResource#schema.title",
  "properties" : {
    "serviceNames" : {
      "type" : "array",
      "title" : "i18n:api-descriptor/UserServicesResource#schema.servicename.title",
      "description" : "i18n:api-descriptor/UserServicesResource#schema.servicename.description",
      "items" : {
        "type" : "string"
      }
    }
  }
}
```

--user

1.236.1.8. update

Usage:

```
am> update UserServices --realm Realm --body body
```

Parameters:

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object"
}
```

1.237. UsernameCollector

1.237.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/UsernameCollectorNode`

Resource version: `1.0`

1.237.1.1. create

Usage:

```
am> create UsernameCollector --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.237.1.2. delete

Usage:

```
am> delete UsernameCollector --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.237.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action UsernameCollector --realm Realm --actionName getAllTypes
```

1.237.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action UsernameCollector --realm Realm --actionName getCreatableTypes
```

1.237.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action UsernameCollector --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.237.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action UsernameCollector --realm Realm --actionName nextdescendents
```

1.237.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query UsernameCollector --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.237.1.8. read

Usage:

```
am> read UsernameCollector --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.237.1.9. update

Usage:

```
am> update UsernameCollector --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "required" : [ ]
}
```

1.238. ValidationService

1.238.1. Realm Operations

Resource path: /realm-config/services/validation

Resource version: 1.0

1.238.1.1. create

Usage:

```
am> create ValidationService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "validGotoDestinations" : {
      "title" : "Valid goto URL Resources",
      "description" : "List of valid goto URL resources.<br><br>Specifies a list of valid URLs for
 the <code>goto</code> and <code>gotoOnFail</code> query string parameters. AM only redirects a user
 after log in or log out to a URL in this list. If the URL is not in the list, AM redirects to either
 the user profile page, or the administration console. If this property is not set, AM will only allow
 URLs that match its domain; for example, <code>domain-of-am-instance.com</code>. Use the <code>*</
code> wildcard to match all characters except <code>?</code>.<p> Examples: </p> <ul><li><code>http://
app.example.com:80/*</code></li> <li><code>http://app.example.com:80/*?*</code></li></ul>",
      "propertyOrder" : 100,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.238.1.2. delete

Usage:

```
am> delete ValidationService --realm Realm
```

1.238.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ValidationService --realm Realm --actionName getAllTypes
```

1.238.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ValidationService --realm Realm --actionName getCreatableTypes
```

1.238.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ValidationService --realm Realm --actionName nextdescendents
```

1.238.1.6. read

Usage:

```
am> read ValidationService --realm Realm
```

1.238.1.7. update

Usage:

```
am> update ValidationService --realm Realm --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "validGotoDestinations" : {
      "title" : "Valid goto URL Resources",
      "description" : "List of valid goto URL resources.<br><br>Specifies a list of valid URLs for
 the <code>goto</code> and <code>gotoOnFail</code> query string parameters. AM only redirects a user
 after log in or log out to a URL in this list. If the URL is not in the list, AM redirects to either
 the user profile page, or the administration console. If this property is not set, AM will only allow
 URLs that match its domain; for example, <code>domain-of-am-instance.com</code>. Use the <code>*</
code> wildcard to match all characters except <code>?</code>.<p> Examples: </p> <ul><li><code>http://
app.example.com:80/*</code></li> <li><code>http://app.example.com:80/*?*</code></li></ul>",
      "propertyOrder" : 100,
      "required" : true,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    }
  }
}
```

1.238.2. Global Operations

Resource path: `/global-config/services/validation`

Resource version: `1.0`

1.238.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ValidationService --global --actionName getAllTypes
```

1.238.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ValidationService --global --actionName getCreatableTypes
```

1.238.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ValidationService --global --actionName nextdescendents
```

1.238.2.4. read

Usage:

```
am> read ValidationService --global
```

1.238.2.5. update

Usage:

```
am> update ValidationService --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
```

```
  "type" : "object",
  "properties" : {
    "validGotoDestinations" : {
      "title" : "Valid goto URL Resources",

```

1.239. WebAgentGroups

1.239.1. Realm Operations

Agent Groups handler that is responsible for managing agent groups

Resource path: `/realm-config/agents/groups/WebAgent`

Resource version: `1.0`

1.239.1.1. create

Usage:

```
am> create WebAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "advancedWebAgentConfig" : {
      "type" : "object",

```

1.239.1.2. delete

Usage:

```
am> delete WebAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.239.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action WebAgentGroups --realm Realm --actionName getAllTypes
```

1.239.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action WebAgentGroups --realm Realm --actionName getCreatableTypes
```

1.239.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action WebAgentGroups --realm Realm --actionName nextdescendents
```

1.239.1.6. query

Querying the agent groups of a specific type

Usage:

```
am> query WebAgentGroups --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.239.1.7. read

Usage:

```
am> read WebAgentGroups --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.239.1.8. update

Usage:

```
am> update WebAgentGroups --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "advancedWebAgentConfig" : {

1.240. WebAgents

1.240.1. Realm Operations

Agents handler that is responsible for managing agents

Resource path: `/realm-config/agents/WebAgent`

Resource version: `1.0`

1.240.1.1. create

Usage:
```
am> create WebAgents --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:
```
{
  "type" : "object",
```

```
 "properties" : {
   "ssoWebAgentConfig" : {
     "type" : "object",

```

1.240.1.2. delete

Usage:

```
am> delete WebAgents --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.240.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action WebAgents --realm Realm --actionName getAllTypes
```

1.240.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action WebAgents --realm Realm --actionName getCreatableTypes
```

1.240.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action WebAgents --realm Realm --actionName nextdescendents
```

1.240.1.6. query

Querying the agents of a specific type

Usage:

```
am> query WebAgents --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.240.1.7. read

Usage:

```
am> read WebAgents --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.240.1.8. update

Usage:

```
am> update WebAgents --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "ssoWebAgentConfig" : {

1.241. WebAuthnAuthenticationNode

1.241.1. Realm Operations

Resource path: `/realm-config/authentication/authenticationtrees/nodes/WebAuthnAuthenticationNode`

Resource version: `1.0`

1.241.1.1. create

Usage:

```
am> create WebAuthnAuthenticationNode --realm Realm --id id --body body
```

Parameters:

`--id`

The unique identifier for the resource.

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "asScript" : {
      "title" : "Return challenge as JavaScript",
      "description" : "If enabled, the node will return its challenge as a fully encapsulated client-
side JavaScript that will interact directly with the WebAuthn API and submit the response back. If
 disabled, the node will return the challenge and associated data in a metadata node, and the custom
 UI will use that to interact with the WebAuthn API itself.",
      "propertyOrder" : 50,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "origins" : {
      "title" : "Origin domains",
      "description" : "A set of fully-qualified URLs of accepted origins, e.g. http://
app.example.com:443. If empty, the accepted origin is the incoming request origin.",
      "propertyOrder" : 15,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "isRecoveryCodeAllowed" : {
      "title" : "Allow recovery codes",
      "description" : "",
      "propertyOrder" : 30,
      "type" : "boolean",
      "exampleValue" : ""
    },
    "timeout" : {
      "title" : "Timeout",
      "description" : "The number of seconds to wait for a valid WebAuthn authenticator to be
 registered before failing.",
      "propertyOrder" : 40,
      "type" : "integer",
      "exampleValue" : ""
    },
    "userVerificationRequirement" : {
      "title" : "User verification requirement",
      "description" : "If specified as REQUIRED, authenticators that don't verify user identity are
 filtered out and should not be selectable by the user.",
      "propertyOrder" : 20,
      "type" : "string",
      "exampleValue" : ""
    },
    "relyingPartyDomain" : {
      "title" : "Relying party identifier",
      "description" : "The domain against which to register devices, if blank AM will make a best
 guess at the domain.",
```

```
        "propertyOrder" : 10,
        "type" : "string",
        "exampleValue" : ""
      }
    },
    "required" : [ "timeout", "asScript", "origins", "isRecoveryCodeAllowed",
  "userVerificationRequirement" ]
}
```

1.241.1.2. delete

Usage:

```
am> delete WebAuthnAuthenticationNode --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.241.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action WebAuthnAuthenticationNode --realm Realm --actionName getAllTypes
```

1.241.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action WebAuthnAuthenticationNode --realm Realm --actionName getCreatableTypes
```

1.241.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action WebAuthnAuthenticationNode --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.241.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action WebAuthnAuthenticationNode --realm Realm --actionName nextdescendents
```

1.241.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query WebAuthnAuthenticationNode --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.241.1.8. read

Usage:

```
am> read WebAuthnAuthenticationNode --realm Realm --id id
```

Parameters:

`--id`

The unique identifier for the resource.

1.241.1.9. update

Usage:

```
am> update WebAuthnAuthenticationNode --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "asScript" : {
      "title" : "Return challenge as JavaScript",
      "description" : "If enabled, the node will return its challenge as a fully encapsulated client-
side JavaScript that will interact directly with the WebAuthn API and submit the response back. If
 disabled, the node will return the challenge and associated data in a metadata node, and the custom
 UI will use that to interact with the WebAuthn API itself.",

```

1.242.1.2. delete

Usage:

```
am> delete WebAuthnRegistrationNode --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.242.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action WebAuthnRegistrationNode --realm Realm --actionName getAllTypes
```

1.242.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action WebAuthnRegistrationNode --realm Realm --actionName getCreatableTypes
```

1.242.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action WebAuthnRegistrationNode --realm Realm --body body --actionName listOutcomes
```

Parameters:

`--body`

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.242.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action WebAuthnRegistrationNode --realm Realm --actionName nextdescendents
```

1.242.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query WebAuthnRegistrationNode --realm Realm --filter filter
```

Parameters:

`--filter`

A CREST formatted query filter, where "true" will query all.

1.242.1.8. read

Usage:

```
am> read WebAuthnRegistrationNode --realm Realm --id id
```

Parameters:

--id

> The unique identifier for the resource.

1.242.1.9. update

Usage:

```
am> update WebAuthnRegistrationNode --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "excludeCredentials" : {

1.243. WebAuthnUserDevices

1.243.1. Realm Operations

The WebAuthn devices service is responsible for exposing functions to change the collection of
WebAuthn authentication devices. The supported methods are update, delete, query

Resource path: `/users/{user}/devices/2fa/webauthn`

Resource version: `1.0`

1.243.1.1. delete

Delete WebAuthn user device

Usage:

```
am> delete WebAuthnUserDevices --realm Realm --id id --user user
```

Parameters:

--id

The unique identifier for the resource.

--user

The WebAuthn devices service is responsible for exposing functions to change the collection of
WebAuthn authentication devices. The supported methods are update, delete, query

1.243.1.2. query

Query the user's WebAuthn devices

Usage:

```
am> query WebAuthnUserDevices --realm Realm --filter filter --user user
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all. Fields that can be queried: [*]

--user

The WebAuthn devices service is responsible for exposing functions to change the collection of WebAuthn authentication devices. The supported methods are update, delete, query

1.243.1.3. update

Update an existing WebAuthn user device

Usage:

```
am> update WebAuthnUserDevices --realm Realm --id id --body body --user user
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "$schema" : "http://json-schema.org/draft-04/schema#",
  "description" : "User devices schema that is used for WebAuthn authentication devices",
  "type" : "object",
  "title" : "User devices schema",
  "properties" : {
    "deviceName" : {
      "type" : "string",
      "title" : "Device Name",
      "description" : "The name of the WebAuthn device."
    },
    "uuid" : {
      "type" : "string",
      "title" : "UUID",
      "description" : "The unique identifier for this device."
    }
  }
}
```

> The WebAuthn devices service is responsible for exposing functions to change the collection of
> WebAuthn authentication devices. The supported methods are update, delete, query

1.244. WebhookService

1.244.1. Realm Operations

Resource path: `/realm-config/webhooks`

Resource version: `1.0`

1.244.1.1. create

Usage:

```
am> create WebhookService --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "url" : {
      "title" : "Url",
      "description" : "The webhook url that is used to create the http call for this webhook.",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "headers" : {
      "title" : "Headers",
      "description" : "The webhook headers added to the http request.",
      "propertyOrder" : 300,
      "required" : true,
      "patternProperties" : {
        ".*" : {
          "type" : "string"
```

```
        }
      },
      "type" : "object",
      "exampleValue" : ""
    },
    "body" : {
      "title" : "Body",
      "description" : "The webhook body to be sent in the http request.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.244.1.2. delete

Usage:

```
am> delete WebhookService --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.244.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action WebhookService --realm Realm --actionName getAllTypes
```

1.244.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action WebhookService --realm Realm --actionName getCreatableTypes
```

1.244.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action WebhookService --realm Realm --actionName nextdescendents
```

1.244.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query WebhookService --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.244.1.7. read

Usage:

```
am> read WebhookService --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.244.1.8. update

Usage:

```
am> update WebhookService --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
```

```
      "url" : {
        "title" : "Url",
        "description" : "The webhook url that is used to create the http call for this webhook.",
        "propertyOrder" : 100,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      },
      "headers" : {
        "title" : "Headers",
        "description" : "The webhook headers added to the http request.",
        "propertyOrder" : 300,
        "required" : true,
        "patternProperties" : {
          ".*" : {
            "type" : "string"
          }
        },
        "type" : "object",
        "exampleValue" : ""
      },
      "body" : {
        "title" : "Body",
        "description" : "The webhook body to be sent in the http request.",
        "propertyOrder" : 200,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      }
    }
}
```

1.244.2. Global Operations

Resource path: `/global-config/webhooks`

Resource version: `1.0`

1.244.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action WebhookService --global --actionName getAllTypes
```

1.244.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action WebhookService --global --actionName getCreatableTypes
```

1.244.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action WebhookService --global --actionName nextdescendents
```

1.244.2.4. read

Usage:

```
am> read WebhookService --global
```

1.244.2.5. update

Usage:

```
am> update WebhookService --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object"
}
```

1.245. WindowsDesktopSsoModule

1.245.1. Realm Operations

Resource path: `/realm-config/authentication/modules/windowsdesktopsso`

Resource version: `1.0`

1.245.1.1. create

Usage:

```
am> create WindowsDesktopSsoModule --realm Realm --id id --body body
```

Parameters:

--id

> The unique identifier for the resource.

--body

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "kerberosServerName" : {
      "title" : "Kerberos Server Name",
      "description" : "The hostname/IP address of the Kerberos (Active Directory) server.",

      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.245.1.2. delete

Usage:

```
am> delete WindowsDesktopSsoModule --realm Realm --id id
```

Parameters:

`--id`

> The unique identifier for the resource.

1.245.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action WindowsDesktopSsoModule --realm Realm --actionName getAllTypes
```

1.245.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action WindowsDesktopSsoModule --realm Realm --actionName getCreatableTypes
```

1.245.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action WindowsDesktopSsoModule --realm Realm --actionName nextdescendents
```

1.245.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query WindowsDesktopSsoModule --realm Realm --filter filter
```

Parameters:

`--filter`

> A CREST formatted query filter, where "true" will query all.

1.245.1.7. read

Usage:

```
am> read WindowsDesktopSsoModule --realm Realm --id id
```

Parameters:

`--id`

> The unique identifier for the resource.

1.245.1.8. update

Usage:

```
am> update WindowsDesktopSsoModule --realm Realm --id id --body body
```

Parameters:

`--id`

> The unique identifier for the resource.

`--body`

> The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",

  }
}
```

1.245.2. Global Operations

Resource path: `/global-config/authentication/modules/windowsdesktopsso`

Resource version: `1.0`

1.245.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action WindowsDesktopSsoModule --global --actionName getAllTypes
```

1.245.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action WindowsDesktopSsoModule --global --actionName getCreatableTypes
```

1.245.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action WindowsDesktopSsoModule --global --actionName nextdescendents
```

1.245.2.4. read

Usage:

```
am> read WindowsDesktopSsoModule --global
```

1.245.2.5. update

Usage:

```
am> update WindowsDesktopSsoModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "kerberosServerName" : {

1.246. WindowsNtModule

1.246.1. Realm Operations

Resource path: `/realm-config/authentication/modules/windowsnt`

Resource version: 1.0

1.246.1.1. create

Usage:

```
am> create WindowsNtModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationDomain" : {
      "title" : "Authentication Domain",
      "description" : "The name of the Windows Domain used for authentication",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "sambaConfigurationFileName" : {
      "title" : "Samba Configuration File Name",
      "description" : "The path to the Samba configuration file.<br><br>The Windows NT authentication
module uses the <code>smbclient</code> command to validate the user credentials against the Windows
domain controller. <br/><br/>For example: <code>/opt/openam/smb.conf</code><br/><br/><i>NB </i>The
<code>smbclient</code> command must be available in the <code>PATH</code> environmental variable
associated with OpenAM.",
      "propertyOrder" : 300,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticationHost" : {
      "title" : "Authentication Host",
      "description" : "The name of the Windows NT Domain Controller.",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "authenticationLevel" : {
      "title" : "Authentication Level",
      "description" : "The authentication level associated with this module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default). ",
      "propertyOrder" : 400,
```

```
      "required" : true,
      "type" : "integer",
      "exampleValue" : ""
    }
  }
}
```

1.246.1.2. delete

Usage:

```
am> delete WindowsNtModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.246.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action WindowsNtModule --realm Realm --actionName getAllTypes
```

1.246.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action WindowsNtModule --realm Realm --actionName getCreatableTypes
```

1.246.1.5. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action WindowsNtModule --realm Realm --actionName nextdescendents
```

1.246.1.6. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query WindowsNtModule --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.246.1.7. read

Usage:

```
am> read WindowsNtModule --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.246.1.8. update

Usage:

```
am> update WindowsNtModule --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "authenticationDomain" : {
      "title" : "Authentication Domain",
      "description" : "The name of the Windows Domain used for authentication",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "sambaConfigurationFileName" : {
      "title" : "Samba Configuration File Name",
```

```
      "description" : "The path to the Samba configuration file.<br><br>The Windows NT authentication
  module uses the <code>smbclient</code> command to validate the user credentials against the Windows
  domain controller. <br/><br/>For example: <code>/opt/openam/smb.conf</code><br/><br/><i>NB </i>The
  <code>smbclient</code> command must be available in the <code>PATH</code> environmental variable
  associated with OpenAM.",
        "propertyOrder" : 300,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "authenticationHost" : {
        "title" : "Authentication Host",
        "description" : "The name of the Windows NT Domain Controller.",
        "propertyOrder" : 200,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
    },
    "authenticationLevel" : {
        "title" : "Authentication Level",
        "description" : "The authentication level associated with this module.<br><br>Each
  authentication module has an authentication level that can be used to indicate the level of security
  associated with the module; 0 is the lowest (and the default). ",
        "propertyOrder" : 400,
        "required" : true,
        "type" : "integer",
        "exampleValue" : ""
    }
  }
}
```

1.246.2. Global Operations

Resource path: `/global-config/authentication/modules/windowsnt`

Resource version: `1.0`

1.246.2.1. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action WindowsNtModule --global --actionName getAllTypes
```

1.246.2.2. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action WindowsNtModule --global --actionName getCreatableTypes
```

1.246.2.3. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action WindowsNtModule --global --actionName nextdescendents
```

1.246.2.4. read

Usage:

```
am> read WindowsNtModule --global
```

1.246.2.5. update

Usage:

```
am> update WindowsNtModule --global --body body
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "defaults" : {
      "properties" : {
        "sambaConfigurationFileName" : {
          "title" : "Samba Configuration File Name",
          "description" : "The path to the Samba configuration file.<br><br>The Windows NT
 authentication module uses the <code>smbclient</code> command to validate the user credentials
 against the Windows domain controller. <br/><br/>For example: <code>/opt/openam/smb.conf</code><br/
><br/><i>NB </i>The <code>smbclient</code> command must be available in the <code>PATH</code>
 environmental variable associated with OpenAM.",
          "propertyOrder" : 300,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
        "authenticationHost" : {
          "title" : "Authentication Host",
          "description" : "The name of the Windows NT Domain Controller.",
          "propertyOrder" : 200,
          "required" : true,
          "type" : "string",
          "exampleValue" : ""
        },
```

```
      "authenticationLevel" : {
        "title" : "Authentication Level",
        "description" : "The authentication level associated with this module.<br><br>Each
authentication module has an authentication level that can be used to indicate the level of security
associated with the module; 0 is the lowest (and the default). ",
        "propertyOrder" : 400,
        "required" : true,
        "type" : "integer",
        "exampleValue" : ""
      },
      "authenticationDomain" : {
        "title" : "Authentication Domain",
        "description" : "The name of the Windows Domain used for authentication",
        "propertyOrder" : 100,
        "required" : true,
        "type" : "string",
        "exampleValue" : ""
      }
    },
    "type" : "object",
    "title" : "Realm Defaults"
  }
  }
}
```

1.247. WsEntity

1.247.1. Realm Operations

Resource path: `/realm-config/federation/entityproviders/ws`

Resource version: `1.0`

1.247.1.1. create

Usage:

```
am> create WsEntity --realm Realm --id id --body body
```

Parameters:

--id

   The unique identifier for the resource.

--body

   The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "entityConfig" : {
      "title" : "Entity Configuration",
      "description" : "",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "metadata" : {
      "title" : "Metadata",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.247.1.2. delete

Usage:

```
am> delete WsEntity --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.247.1.3. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query WsEntity --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.247.1.4. read

Usage:

```
am> read WsEntity --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.247.1.5. update

Usage:

```
am> update WsEntity --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "entityConfig" : {
      "title" : "Entity Configuration",
      "description" : "",
      "propertyOrder" : 200,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    },
    "metadata" : {
      "title" : "Metadata",
      "description" : "",
      "propertyOrder" : 100,
      "required" : true,
      "type" : "string",
      "exampleValue" : ""
    }
  }
}
```

1.248. ZeroPageLoginCollector

1.248.1. Realm Operations

FORGEROCK

Resource path: `/realm-config/authentication/authenticationtrees/nodes/ZeroPageLoginNode`

Resource version: `1.0`

1.248.1.1. create

Usage:

```
am> create ZeroPageLoginCollector --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "usernameHeader" : {
      "title" : "Username Header Name",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    },
    "referrerWhiteList" : {
      "title" : "Referer Whitelist",
      "description" : "",
      "propertyOrder" : 400,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "passwordHeader" : {
      "title" : "Password Header Name",
      "description" : "",
      "propertyOrder" : 200,
      "type" : "string",
      "exampleValue" : ""
    },
    "allowWithoutReferer" : {
      "title" : "Allow Without Referer",
      "description" : "",
      "propertyOrder" : 300,
      "type" : "boolean",
      "exampleValue" : ""
    }
  },
```

```
      "required" : [ "referrerWhiteList", "usernameHeader", "allowWithoutReferer", "passwordHeader" ]
    }
```

1.248.1.2. delete

Usage:

```
am> delete ZeroPageLoginCollector --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.248.1.3. getAllTypes

Obtain the collection of all secondary configuration types related to the resource.

Usage:

```
am> action ZeroPageLoginCollector --realm Realm --actionName getAllTypes
```

1.248.1.4. getCreatableTypes

Obtain the collection of secondary configuration types that have yet to be added to the resource.

Usage:

```
am> action ZeroPageLoginCollector --realm Realm --actionName getCreatableTypes
```

1.248.1.5. listOutcomes

List the available outcomes for the node type.

Usage:

```
am> action ZeroPageLoginCollector --realm Realm --body body --actionName listOutcomes
```

Parameters:

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "title" : "Some configuration of the node. This does not need to be complete against the
 configuration schema."
}
```

1.248.1.6. nextdescendents

Obtain the collection of secondary configuration instances that have been added to the resource.

Usage:

```
am> action ZeroPageLoginCollector --realm Realm --actionName nextdescendents
```

1.248.1.7. query

Get the full list of instances of this collection. This query only supports `_queryFilter=true` filter.

Usage:

```
am> query ZeroPageLoginCollector --realm Realm --filter filter
```

Parameters:

--filter

A CREST formatted query filter, where "true" will query all.

1.248.1.8. read

Usage:

```
am> read ZeroPageLoginCollector --realm Realm --id id
```

Parameters:

--id

The unique identifier for the resource.

1.248.1.9. update

Usage:

```
am> update ZeroPageLoginCollector --realm Realm --id id --body body
```

Parameters:

--id

The unique identifier for the resource.

--body

The resource in JSON format, described by the following JSON schema:

```
{
  "type" : "object",
  "properties" : {
    "usernameHeader" : {
      "title" : "Username Header Name",
      "description" : "",
      "propertyOrder" : 100,
      "type" : "string",
      "exampleValue" : ""
    },
    "referrerWhiteList" : {
      "title" : "Referer Whitelist",
      "description" : "",
      "propertyOrder" : 400,
      "items" : {
        "type" : "string"
      },
      "type" : "array",
      "exampleValue" : ""
    },
    "passwordHeader" : {
      "title" : "Password Header Name",
      "description" : "",
      "propertyOrder" : 200,
      "type" : "string",
      "exampleValue" : ""
    },
    "allowWithoutReferer" : {
      "title" : "Allow Without Referer",
      "description" : "",
      "propertyOrder" : 300,
      "type" : "boolean",
      "exampleValue" : ""
    }
  },
  "required" : [ "referrerWhiteList", "usernameHeader", "allowWithoutReferer", "passwordHeader" ]
}
```

Appendix A. Getting Support

For more information or resources about OpenAM and ForgeRock Support, see the following sections:

A.1. Accessing Documentation Online

ForgeRock publishes comprehensive documentation online:

- The ForgeRock Knowledge Base offers a large and increasing number of up-to-date, practical articles that help you deploy and manage ForgeRock software.

  While many articles are visible to community members, ForgeRock customers have access to much more, including advanced information for customers using ForgeRock software in a mission-critical capacity.

- ForgeRock product documentation, such as this document, aims to be technically accurate and complete with respect to the software documented. It is visible to everyone and covers all product features and examples of how to use them.

A.2. Using the ForgeRock.org Site

The ForgeRock.org site has links to source code for ForgeRock open source software, as well as links to the ForgeRock forums and technical blogs.

If you are a *ForgeRock customer*, raise a support ticket instead of using the forums. ForgeRock support professionals will get in touch to help you.

A.3. Getting Support and Contacting ForgeRock

ForgeRock provides support services, professional services, training through ForgeRock University, and partner services to assist you in setting up and maintaining your deployments. For a general overview of these services, see https://www.forgerock.com.

ForgeRock has staff members around the globe who support our international customers and partners. For details, visit https://www.forgerock.com, or send an email to ForgeRock at info@forgerock.com.
