# PingDataGovernance and PingAuthorize

---

PingAuthorize is the name PingDataGovernance took starting with the 8.3 release.

PingAuthorize provides all of the functionality of PingDataGovernance and adds additional Symphonic product functionality that wasn't available in PingDataGovernance.

New features include:

- A simple JSON Policy Decision Point API that simplifies enabling dynamic authorization from application code
- The Deployment Manager, which lets you update policies with zero downtime and reduced deployment costs

For information about the latest release, see the [PingAuthorize documentation](#).

For PingDataGovernance releases, see [PingDataGovernance documentation](#).
